GENERAL INTRODUCTION

This report, which covers the year ending 31st March, 1947, shows the Department expenditure at a comparatively high level. Expenditure is more than double that of the fiscal year ending in 1939.

Following the outbreak of war the Department made every effort to improve the quality of service rendered. Progress in this connection was, of course, dependent upon available man power, equipment and supplies. Due to sharply rising costs absorbing an increasing proportion of our financial resources, progress was equally dependent upon available funds.

In the pre-war period the cost of maintaining a seasonal fire ranger was four hundred dollars. The present cost is seven hundred dollars for ranger labour of similar quality. Ranger labour of a quality satisfactory for Forest Ranger School training requires double the funds expended on ranger labour in the pre-war period. With equipment and operating supplies, together with wages of other personnel requiring sharply increased expenditure, a substantial drain is placed upon funds provided in the post-war period for expansion of our services.

Greater emphasis placed on careful management of resources has offset in no small degree, shrinkage in the purchasing value of the dollar. Additional funds placed at our disposal have made up the remaining shrinkage in value, permitted betterment in quality of service rendered and some expansion in service. Further expansion in the management of the natural resources of the Province entrusted to this Department, is in no small part dependent upon increased funds available for this purpose.

The report on the work of the Department is listed under the following headings:

Accounts	Operation and Personnel
Air Service	Reforestation
Fish and Wildlife	Research
Forest Protection	Surveys and Engineering
Land and Recreational Areas	Timber Management
Law	

GOD'S COUNTRY

DIVISION OF ACCOUNTS

GENERAL

As of 15th April, 1946, the Minister of Lands and Forests was charged with the administration of the former Department of Game and Fisheries, which became the Fish and Wildlife Division of the Department of Lands and Forests. For accounting purposes all receipts and expenditures of the former Department of Game and Fisheries are included under the Fish and Wildlife Division from 1st April, 1946, and a separate accounting made for this new Division.

A. DEPARTMENT OF LANDS AND FORESTS (OTHER THAN FISH AND WILDLIFE DIVISION)

The financial report sets out a substantial increase — \$1,862,412. — in expenditures appropriation of the Department as compared with the previous year. This increased appropriation was required for

- (1) Air Service Equipment.
- (2) Construction of Ranger School at Dorset.
- (3) Expansion in field work of the Reforestation, Forest Research and Timber Management Divisions.

This increased expenditure was partly offset by an increase in cash receipts — \$1,551,500. — as compared with the previous year. Revenue for the year was the highest in the history of the Department with most sources of revenue showing improvement, particularly receipts from sale of Crown timber. This result was due to an increase in available woods labour following the close of hostilities, and a sharp upswing in tourist trade throughout the Province.

Following the policy of obtaining the closest possible co-operation between Field and Main Offices, officers of this Division made the following field inspections, for purposes of instruction of Field Officers and inspection of work programs — and Provincial Land Tax Courts of Revision:

- (a) *Reforestation Field Offices:* Angus, Midhurst, St. Williams.
- (b) *District Offices:* Algonquin Park, Chapleau, Cochrane, Galt, Fort Frances, Geraldton, Gogama, Kapuskasing, Kemptville, Kenora, Lindsay, North Bay, Parry Sound, Port Arthur, Sault Ste. Marie, Sioux Lookout, Sudbury, Tweed.
- (c) *Other Field Offices:* Ottawa, Pembroke, Ranger School (Dorset).
- (d) *Sundry:* Bracebridge, Little Current, Haileybury.

B. FISH AND WILDLIFE DIVISION—FORMERLY THE DEPARTMENT OF GAME AND FISHERIES

Receipts and Disbursements for the year are shown separately in Schedule G, Page 24.

A substantial increase—\$449,313.09—in the expenditure appropriation for the year, as compared with the previous year, was required. This increased appropriation was required for

- (1) Enforcement of the Game and Fisheries Act.
- (2) Hatcheries—Operation and maintenance.
- (3) Erecting buildings; Purchase of Land, Buildings and Equipment.

The increase in expenditure was more than offset by an increase in cash receipts—\$597,034.99—as compared with the previous year. Revenue for the year was the highest in history, with most sources of revenue showing improvement, particularly receipts from the sale of Hunting and Angling Licences. This was due to a sharp upswing in tourist trade throughout the Province.

FINANCIAL REPORT

1. Cash Receipts and Disbursements:

Statement for the year ending March 31, 1947 is set out on Schedule A, page 10. The following summarizes the result of operations for the year.

Total—Cash Receipts.....	88,414,947.24
Total—Cash Disbursements.....	5,961,805.96
Excess of Receipts over Disbursements.....	82,453,141.28

2. Comparison of Results with those of Prior Years:

(a) Receipts

In Schedule B, page 16, cash receipts for the year under review have been compared with those of the previous four years. This data may be summarized as follows:

DIVISION	1943 \$	Years ending March 31st				1947 \$
		1944 \$	1945 \$	1946 \$	1947 \$	
Accounts—						
Water Power Rentals.....	648,485	618,901	609,425	654,979	680,568	
Provincial Land Tax.....	146,014	158,745	175,342	209,459	204,475	
Long Lac Diversion.....	44,850	21,750	21,300	20,850	20,400	
Miscellaneous.....	4,267	5,939	20,388	9,048	46,071	
Land and Recreational Areas.....	173,779	273,754	294,308	338,258	430,644	
Forest Protection.....	51,825	22,917	26,850	30,943	46,402	
Timber Management.....	4,982,281	4,561,734	4,241,581	5,554,781	6,944,104	
Surveys.....	3,438	13,293	1,275	459	1,652	
Air Service.....	6,946	19,448	12,417	25,284	15,258	
Reforestation.....	8,453	26,138	10,559	19,386	25,373	
Lignite Development.....	924	16				
	6,071,262	5,722,635	5,413,445	6,863,447	8,414,947	

(b) The following is a comparison of total disbursements for the five years ending March 31, 1947:

	Years ending March 31-st				
	1943	1944	1945	1946	1947
	\$	\$	\$	\$	\$
Total Disbursements—					
Chargeable to appropriation as voted.....	2,799,689	3,040,901	3,572,225	3,988,394	5,961,806
Additional Disbursements—					
Uncontrollable items, chargeable to Special Warrants.....	701,296			111,000	
Total Disbursements.....	3,500,985	3,040,901	3,572,225	4,099,394	5,961,806

(c) *Trend of Receipts and Disbursements*

i. *Receipts*

Annual Receipts 1947 as compared with 1943 show an increase of approximately \$2,343,685.00 or 38.6 per cent. This increase is due in large part to increased revenue from:

Land and Recreational Areas	\$ 256,865.00
Timber Management.....	1,961,823.00
Land Tax.....	58,461.00
Miscellaneous	41,804.00
Water Power.....	32,083.00
	\$2,351,036.00

ii. *Disbursements*

Annual Disbursements 1947 as compared with 1943 show an increase of \$2,460,821.00 or 70.3 per cent. This increase is accounted for in large part by the following items:

Main Office.....	\$ 161,665.00
Air Service.....	334,053.00
Forest Research.....	221,174.00
Basic Organization, Extra Fire Fighting and Sealing.....	1,897,489.00
Construction and Operating Forest Ranger School.....	323,429.00
Reforestation.....	208,976.00
	\$3,146,786.00

Less special Disbursements applicable in 1943:

Hydro-Electric Power Commission of Ontario re Long Lac Diversion.....	400,000.00
Lignite Development Project.....	299,993.00
	699,993.00
	\$2,446,793.00

(d) *Fish and Wildlife Division*

Receipts and Disbursements of this Division are separately shown in Schedule G, page 24.

NORSEMAN AIRCRAFT OB11, OF THE DIVISION OF AIR SERVICE, TAXIING IN TO DOCK AT LILLABELLE LAKE.

DIVISION OF AIR SERVICE

As the fire hazard in the summer of 1946 was moderate, the Air Service was not overtaxed in its forest fire detection and suppression duties.

The Department operated from five winter stations; Smoke Lake (Algonquin Park), Eva Lake (Quetico Park), Geraldton, Gogama and Sioux Lookout. The flying was largely in connection with general forestry administration, fish and wildlife, poaching, and emergency sickness and accident cases.

Equipment

Four new Norseman aircraft were purchased.

The Department submitted specifications to the De Havilland Aircraft Company of Canada for the building of a semi-transport type of plane. Company engineers examined the specifications, and reports have been encouraging.

Maintenance and Improvements

Construction of an addition to the main hangar at Sault Ste. Marie has been undertaken by the Department of Public Works to provide storage for approximately fifty aircraft.

Co-operation with the Royal Commission on Forestry, and other Government Departments.

Assistance was accorded Dominion Government entomologists in their forest insect infestation surveys. The agreement effected the previous year with the Department of Health was extended to include the Provincial Police. Co-operation was continued with other Departments of the Ontario Government in supplying their flying needs, as required.

In addition the Air Service supplied 272 hours of flying to the Royal Commission on Forestry, which greatly expedited its work.

Accidents

It is a great pleasure to report that there were no serious accidents to any of the Air Service personnel during the year.

Statistics

The following tables give details of operation:

Tables

Table No. 1—Allocation of aircraft.

Table No. 2—Transport aircraft—hours flown and effective loads carried.

Table No. 3—Hours flown on various phases of flying operations.

A FRIENDLY WHITE-TAILED DEER.

DIVISION OF FISH AND WILDLIFE

This is the first report published since the incorporation of the Department of Game and Fisheries into the Department of Lands and Forests as the Division of Fish and Wildlife.

The amalgamation of the two Departments was conceived as a move to bring all the renewable natural resources of the Province under one administration, and the process of transfer was begun in May, 1946. By July, 1946, the move was complete, and Dr. W. J. K. Harkness was selected as chief of the newly formed Division.

Dr. Harkness organized the Division into four separate sections, as follows:

1. *Enforcement:* Under the supervision of Mr. J. F. Farrington. The Enforcement Section is responsible for the proper enforcement of the Game and Fisheries Act and Regulations, has custody of all seized materials, and the sale thereof.

2. *Wildlife:* Dr. C. H. D. Clarke, Supervisor of this Section, has under his control the administration of the game resources of the Province, the payment of wolf and bear bounties, and the administration of the fur resources, both wild and ranch raised.

3. *Game Fish:* Mr. H. H. MacKay is responsible for the proper administration and maintenance of the angling fishery, production of fish by provincial hatcheries, and such scientific surveys and projects as are necessary to ensure proper placing of hatchery raised fish.

4. *Commercial Fish:* Mr. W. H. R. Werner is responsible for the administration of the commercial fishing resources of the Province, including issue of licences and collection of statistical data concerning catches.

The amalgamation of the two Departments was extended into the field, all game and fisheries overseers and inspectors being taken into the forest district organization. In each District a Fish and Wildlife Specialist was appointed, to whom all Overseers in the District are responsible. This specialist, in most cases a senior Overseer, is himself responsible to the District Forester.

LIST OF SPECIALISTS BY DISTRICTS—

<i>District</i>	<i>Fish and Wildlife Specialist</i>
Fort Frances.....	H. E. Pearson
Kenora.....	H. Harris
Sioux Lookout.....	C. L. Perrie
Geraldton.....	J. Noble
Port Arthur.....	R. D. Windsor
Cochrane.....	L. A. Dent
Kapuskasing.....	O. D. Lewis
Chapleau.....	A. Crichton
Gogama.....	C. R. Weaver
North Bay.....	G. M. Parks
Sault Ste. Marie.....	C. F. Cook
Sudbury.....	C. F. Bibby
Algonquin.....	E. L. Skuce
Parry Sound.....	N. McNaughton
Quinte.....	R. G. Sheppard
Rideau.....	R. Baker
Trent.....	A. M. Hodgson
Lake Erie.....	W. Keller
Lake Huron.....	E. R. Meadows
Lake Simcoe.....	J. S. Ellis

The staff of the Fish and Wildlife Division works in close cooperation with many professional associations and sporting associations. Representatives attend meetings of the Ontario Federation of Commercial Fishermen, the Ontario Fur Breeders' Association, and many fish and game protective associations throughout the Province.

Grants were given to the two associations mentioned above, and also the Niagara District Pheasant Breeders' Association, Mrs. E. L. Marsh, Mr. E. T. Jones, and the Jack Miner Migratory Birds Foundation.

Many members of the Head Office staff are closely connected with the Ontario Research Commission, and sit on many of the committees of that organization.

In April, a joint meeting of Fish and Wildlife Technical Personnel of Ontario and New York State was held in Toronto under the sponsorship of the former Department of Game and Fisheries.

In December of 1946, a course was organized at the recently opened Forest Ranger School at Dorset, for the instruction of Fish and Wildlife Specialists and Overseers in the identification and ecology of the principal species of fish, birds and mammals of the Province. This course extended for two weeks and the instruction received was of considerable value. In addition, an opportunity was presented for the instructing staff, drawn from the University of Toronto, the Royal Ontario Museum of Zoology and Head Office, to meet and talk to the field staff.

At the annual meeting of the Department of Lands and Forests, January 21st, 1947, Mr. Lloyd W. Swift, Chief of the Division of Wildlife Management, United States Forest Service, addressed the staff of the Department.

Reports are presented under the headings of the four sections as outlined above.

ENFORCEMENT

On April 1st, 1946, Game and Fisheries Enforcement officers in Ontario numbered 136.

These officers were responsible for enforcement throughout the Province of provisions of the Game and Fisheries Act and Regulations, the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, and the Migratory Birds Convention Act and Regulations.

Previous to the amalgamation of the Department of Game and Fisheries with the Department of Lands and Forests, these enforcement officers had been subject to direct administration from headquarters at Toronto, though in that portion of the Province lying north and west of the French and Mattawa Rivers and Lake Nipissing, they were under the immediate supervision of district superintendents, viz:—

- (a) at North Bay,—
in the Districts of Nipissing (north of the Mattawa River and Lake Nipissing), Timiskaming, Cochrane, Sudbury and Algoma; and
- (b) at Fort William,—
in the Districts of Thunder Bay, Fort Frances and Kenora.

In the territory south of the French and Mattawa Rivers and Lake Nipissing there were 74 officers; in the territory under supervision through the North Bay office there were 35 officers; and in the territory under supervision through the Fort William office there were 17 officers.

As of March 31, 1947, there were 177 officers in the enforcement service of the Fish and Wildlife Division, 92 in Southern Ontario, 52 in the districts formerly supervised through the North Bay office, and 33 in the districts formerly supervised through the Fort William office. In general terms, Southern Ontario comprises the following forestry districts, viz: Algonquin, Lake Erie, Lake Huron, Lake Simcoe, Parry Sound, Quinte, Rideau and Trent. The area formerly supervised through the North Bay office comprises the following forestry Districts, viz: Chapleau, Cochrane, Gogama, Kapuskasing, North Bay, Sault Ste. Marie and Sudbury. The area formerly supervised through the Fort William office comprises the following forestry Districts, viz: Fort Frances, Geraldton, Kenora, Port Arthur and Sioux Lookout.

The Fish and Wildlife enforcement officers assigned to each District are under the immediate jurisdiction of the District Forester in charge. There is attached to the office of each District Forester a Fish and Wildlife Specialist, whose principal responsibility is to advise enforcement officers in the field and to co-operate in the supervision of the services of these enforcement officers.

Border patrols were maintained during the summer months at various ports of entry from the United States into Ontario, including Fort Frances, Pigeon River, Sault Ste. Marie, Sarnia, Windsor, Fort Erie, Niagara Falls, the Thousand Island Bridge at Ivy Lea, Prescott and Cornwall. The principal service of the officers engaged in these patrols was to advise American visitors on their arrival in Ontario of the requirements of the Special Fishery Regulations and to check the exportation of fish by such non-resident anglers on their departure from the Province.

During the open season for deer in the fall, active road patrols were maintained in several Districts and particularly in those areas in which the hunting of deer was intensive, with a view to contacting hunters returning from their hunting expeditions and checking on the animals which had been taken.

Resulting from the operation of these patrols, much valuable information accrued to this Division, and there is every reason to believe that the activities of the officers who undertook these patrols were responsible for a more rigid compliance with the provisions of our legislation and regulations by those participating in the recreation derived from angling and hunting.

In their work of enforcement, officers of the Department in their respective patrol areas, derived an appreciable degree of assistance from the co-operation of those who held appointments as Deputy Game Wardens. These Deputy Game Warden appointments are of an honorary nature and are provided, on application, to sportsmen and conservationists who are interested in the protection of our fish and wildlife resources. During the year under review, such appointments were provided to more than thirteen hundred applicants. A large percentage of these appointments were made on the recommendation of the respective municipal councils of the various townships established as regulated game preserve areas. While these appointments were province-wide in their scope, it is quite probable that those so appointed in regulated townships confined their assistance to services within the township, along the lines of securing compliance by hunters with provisions of the regulations which governed.

A study of the records reveals the seizure of equipment, as well as fish and game taken illegally, in 2,166 cases.

Particulars of the officers responsible for these seizures are as follows, viz:—

Overseers.....	2,030 cases
Deputy Game Wardens.....	46 cases
Provincial police constables.....	21 cases
Municipal police constables.....	3 cases
Joint Action:	
Overseers and D. G. W.....	43
Overseers and O. P. P.....	14
Overseers and Municipal Police.....	9
	66 cases
	<hr/> 2,166 cases

The articles seized as a result of these activities included:—

Live animals and birds in.....	4 cases
Game animals (and portions) and birds in.....	202 cases
Fire arms in.....	976 cases
Fish in.....	305 cases
Nets and fishing gear in.....	150 cases
Angling equipment in.....	321 cases
Spears in.....	65 cases
Pelts and hides in.....	319 cases
Traps and snares in.....	195 cases
Water craft in.....	26 cases
Outboard motors in.....	10 cases
Motor vehicles in.....	4 cases
Lights (artificial) in.....	52 cases
Miscellaneous articles in.....	73 cases

Further details regarding these seizures are set forth in the following tables:—

Game animals (and portions) and birds:—

Deer and venison and moose and moose meat in..	137 cases
Black and Grey Squirrels.....	4
Pheasants.....	11
Quail.....	1
Partridge.....	30
Ducks.....	14
Rabbits.....	53

Fire Arms:—	
.22 calibre rifles,	497
.25 calibre rifles,	4
.25 .20 calibre rifles,	6
.22 410 combination rifle and shotgun,	2
High-power and heavy calibre rifles, including the following calibres:— .250 .3000; .25 .35; .30; .30 .30; .303; .30 .40; .32; .32 .40; .348; .35; .351; .38 .40; .38 .55; .405; .44 .40; .45; .45 .90; .57; 6.5 M.M.; and 8 M.M.,	157
Shot guns, including single barrel, double barrel, repeating and automatic,	331
Revolvers,	2
Air-guns,	18
Fish:—	
Commercial operations,	21
Illegal netting,	26
Spearing,	26
Angling,	232
Nets and Fishing Gear:	
Gill nets seized in,	114 cases
Hoop nets seized in,	9 cases
Seine nets seized in,	8 cases
Dip nets seized in,	14 cases
Hook lines seized in,	10 cases
Pelts and Hides:—	
Beaver,	749
Fisher,	1
Fox,	68
Lynx,	3
Marten,	1
Mink,	45
Muskrat,	472
Otter,	18
Raccoon,	42
Skunk,	1
Squirrel,	3
Weasel,	30
Deer and moose hides,	68
Traps and Snares:—	
A total of 1,939 traps and snares were seized, a large proportion of which, on account of the minor or technical nature of the infractions involved, were redeemed for nominal fees by the persons from whom they had been originally seized.	
Artificial Lights:—	
Flashlights,	36
Gasoline lanterns,	6
Coal oil lanterns,	2
Carbide lamps,	5
Spotlights,	6
Jack-lights,	2

Miscellaneous articles:—

Among the miscellaneous articles which were seized are included the following:—

Decoys.....	48
Tarpaulins and tents.....	4
Pack-sacks.....	14
Haversacks.....	7
Suit-cases.....	4
Trunks.....	1
Axes.....	9
Knives.....	5
Shovels.....	3
Forks.....	1
Metal fish containers.....	6
Storage batteries.....	3
Fish shanties.....	2

As in the case of traps and snares, due to the minor and technical nature of the offences which were responsible for the actual seizures, in a large percentage of the cases involving fire-arms and angling equipment, many of these articles were redeemed for nominal fees by those from whom the seizures were made.

PROSECUTIONS

The statistics in the subjoined tables, and the explanatory remarks which follow may prove of considerable interest to those concerned.

INFORMATIONS

	Seizures	Investigations	Total
Overseers.....	1,789	279	2,068
Provincial Police.....	26	..	26
Joint Action.....	29	6	35
Total.....	1,844	285	2,129

RESULTS OF PROSECUTIONS

	Convictions	Dismissed	Withdrawn	Total
Overseers.....	1,979	85	4	2,068
Provincial Police.....	26	26
Joint Action.....	35	35
Total.....	2,040	85	4	2,129

Resulting from patrols and investigation, charges were laid against violators in a total of 2,129 cases in which infractions of provisions of the Game and Fisheries Act and Regulations, the Special Fishery Regulations for Ontario and the Migratory Birds Convention Act and Regulations which had been witnessed or disclosed upon investigation.

In 2,040 of these court actions, convictions were registered by the various Magistrates before whom the respective charges were heard; in 85 cases the charges were dismissed for lack of sufficient substantiating evidence; and in the 4 remaining cases the charges were, for various reasons, withdrawn by the officers who had been responsible for laying the same.

A review of these 2,129 cases which were prosecuted reveals the following information which may presumably be of further interest:

Fish and Wildlife Overseers laid the charges in 2,068 instances; convictions were registered in 1,979 of these, 1,718 of which were subsequent to seizure of equipment on observance of infractions, and 261 following investigation of information which disclosed infractions. The charges laid by Overseers in 85 cases, 67 following seizures and 18 following investigation, were dismissed; and in the remaining 4 cases, all following seizures, the charges were withdrawn.

Provincial Police Constables were responsible for the laying of charges in 26 cases, in all of which this action followed seizures, and in all these cases convictions were registered.

Joint action by Overseers, Deputy Game Wardens, Provincial Police Constables and or Municipal Police Constables was subsequently followed by the laying of information in 35 cases, all of which were successfully prosecuted and convictions recorded. The charges in 29 of these cases were as a result of, and subsequent to, seizures and the observance of violations, while in the remaining 6 cases the informations were laid following the investigation of evidence of infractions.

WILDLIFE MANAGEMENT

General

The over-all picture with respect to wildlife management in Ontario during the first warless year is not entirely satisfactory. Wartime prosperity had resulted in a steady increase of hunting pressure, despite the absence of a large proportion of able-bodied men in military service, the severe shortage of sporting goods, especially ammunition, and the drastic gasoline rationing. The present year finds all restrictions removed, our fighting men all home and absorbed into civilian occupations, and a general high level of wages and almost complete employment. Similar conditions prevail in the United States. The result is an intensity of hunting pressure, both from residents and non-residents, such as our Province has never before known.

Coupled with increased hunting, there are a number of factors at work that are inimical to wildlife. In farm lands, game has always been dependent on patches of weeds and brush for food and cover, especially such species as European Hare, Pheasant and Hungarian Partridge that do not frequent woodlots. These patches have always been a blight on the landscape from the point of view of clean farming, but, fortunately for the game, really energetic farmers have not been too numerous. We now live in the age of chemical weed and brush killers, and what was once wished for in the way of clean farming, now becomes possible. We also have rural engineers keeping open roads that were formerly allowed to drift in winter, and each patch of weeds and brush on the roadside is a potential snowdrift. Obviously, wildlife management can never exist at cross-purposes with scientific agriculture. If the old food and shelter patches should go, then go they must, but it becomes our task to develop techniques for providing food and shelter that will not be objectionable.

Of a similar nature are local increases of pasture land, conversion of waste land into tobacco farms, and penetration of the vital deer winter range by farming which may superficially leave the country practically unaltered, because miles of barren hills still exist, while actually clearing the swamps which were the sole support in winter of deer ranging the whole area in hunting season. They are offset by some gains, chiefly in the matter of reforestation, and in the management of woodlots but wildlife management still remains largely a matter of executive orders rather than an established part of our land use, though we know that wildlife is a product of the land, not of regulations.

Many of our important wildlife species are at the crossroads today, with a natural tendency to slide into an easy downgrade leading to oblivion—part of the famous road paved with good intentions. The condition of our waterfowl is alarming. The propagation of exotic species can easily be merely a sink hole for public and private funds unless there is food and cover for the birds in the area in which they are released, and unless they are protected at release from the shock of changing their environment. Our moose have shown a distinct tendency to go downhill. Our caribou have nearly vanished. Now they are hanging on and could reasonably be headed upward if we give them a little help. Beaver are abundant, and will stay that way if we give them help. Other fine fur bearers are scarce, but where trappers can get a good revenue from beaver the other species can spread out from the game preserves without being persecuted to extinction.

Migratory Birds

The regulations respecting migratory birds are established by federal authority under the Migratory Birds Convention Act. There is no doubt that the situation of our ducks and geese is more alarming than it has been since 1936. They have shown a sharp decline for the second year in succession, and the report of the mid-winter inventory organized by the United States Fish and Wildlife Service shows a critical condition. Checks of hunters' bags of ducks are reported to have shown a shortage of young birds, and this is reflected also in reports of goose hunters visiting James Bay. For the first time the mid-winter duck count was extended to the entire winter range of ducks and our officers participated by counting ducks on Ontario open waters during the census period.

Woodcock seem to be holding their numbers. A series of counts to check the abundance of this species on Ontario nesting grounds was commenced.

Upland Game (Native)

The various species of grouse now show a general increase, after having been at the bottom of their natural cycle. In a few areas the increase is well enough advanced that the birds can no longer be called scarce, while in others the increase has still not begun. A fairly general increase in snowshoe rabbits is also reported. Cottontail rabbits remain in normal numbers.

It has been drawn to our attention that our only population of pinnated grouse, on Manitoulin Island, has been spreading recently. This fact was given publicity in the Department's magazine "Sylva" with a view to aiding in protection, so that the colony of these birds on the island could be built up and perhaps used for propagation.

Fur-Bearing Animals

Nearly all fur-bearing animals vary in numbers according to the progress of natural cycles. A few, notably the beaver, remain constant excepting as their numbers are controlled by trapping. The most notable population change is a decrease of mink, which are becoming scarce. Muskrat are also showing signs of decline, although in many of our best areas the population is still high. Weasel and raccoon are reported to be decreasing locally and although skunks are still numerous they have fallen off to some extent. In some of these low-value furs, the volume of trade gives little indication of populations. Fox remains abundant. In a few areas there are stocks of fisher and marten, but both of these species, and the lynx as well, are so scarce that natural cycles fail to develop normally. The wolverine is practically extinct, a fact which may ultimately be regretted, as its fur possesses special properties which are making it valuable. As a predator the species was hardly more destructive than other

fur-bearers and its depredations on trap-lines were probably less serious than those of the wolf. Its near-extirmination is evidence against any great difficulty of capture.

Trap-line Management

A careful study is now being made of the possibility of improving the basis of trap-line management in Ontario.

Introduced Wildlife

The ring-necked pheasant was at a low ebb in southern Ontario in the spring of 1946 after a series of adverse seasons. A study of the wild hatch showed large and healthy broods, but the number of broods was extremely small. As the quality of the shoot is determined by the wild stock it was obviously predestined to be poor. Isolated colonies of Hungarian Partridge survive, after unfavourable seasons, over a wide area. They are reasonably numerous in the eastern tip of the Province. European hares are in normal numbers, and have practically stopped spreading.

Wildlife Propagation

Pheasants were raised under contract at the Department's farms at Normandale and Codrington. In addition, deficiencies in our supply of birds were made up by purchase from private breeders.

A complete review of the history of the Ring-necked Pheasant in Ontario made during the year revealed that, in areas where the snowfall totalled over 50 inches, pheasants were never established in shootable numbers unless there was some local condition related to agricultural practice which provides compensating food and shelter in winter. Where the snowfall is greater than 70 inches it is not worth while trying pheasants at all.

Open Seasons

In addition to the open seasons established by statute, the following open seasons were established by Order-in-Council under appropriate sections of the Game and Fisheries Act, 1946.

Ruffed Grouse, Spruce Grouse, Sharp-tailed Grouse and Ptarmigan—An open season was established from October 5th to October 14th, 1946, both dates inclusive, in all parts of Ontario excepting the counties of Essex, Kent, Lambton, Middlesex, Elgin, Perth, Oxford, Norfolk, Waterloo, Brant, Haldimand, Wentworth, Lincoln, Welland, Peel, Halton and York, and the townships of Pickering, Whitby and Whitby East in Ontario County. The bag limit was set at five birds per day and twenty for the whole season.

Pheasants—The open season for pheasants permitted ring-necked pheasants to be hunted or killed with guns other than guns using ammunition containing only one bullet between the hours of 8 a.m. and 5 p.m.—

- (a) On October 23rd, 26th and 28th, 1946, in the townships of,—Caistor, Clinton, Gainsboro, Grantham, Grimsby North, Grimsby South, Louth and Niagara in the County of Lincoln; Bertie, Crowland, Humberstone, Pelham, Stamford, Thorold, Wainfleet and Willoughby in the County of Welland; and Ancaster, Barton, Beverley, Binbrook, Flamboro East, Flamboro West, Glanford and Saltfleet in the County of Wentworth;
- (b) On October 25th and 26th, 1946, in the townships of,—Marysburgh South in the County of Prince Edward; Pickering, Whitby and Whitby East in the County of Ontario; Gwillimbury North, King, Markham, Scarborough, Vaughan and Whitechurch in the County of York; Albion, Caledon, Chinguacousy, and in that portion of the Township of Toronto lying North of the Queen Elizabeth Highway, in the County of Peel; Esquesing, Nassagaweya, Nelson and Trafalgar in the County of Halton; Puslinch in the County of Wellington; Burford, Dumfries South and Onandaga in the County of Brant; Dereham and Oxford East in the County of Oxford; Aldborough, Bayham, Dorchester South, Dunwich and Malahide in the County of Elgin; and Westminster in the County of Middlesex (part);
- (c) On October 24th in Lambton county, except the Township of Plympton;
- (d) On October 31st and November 1st in Pelee Island, Essex County.

The bag limit was set at three cock pheasants per day except in Pelee Island where it was set at four cock pheasants per day.

Black and Gray Squirrels—An open season was established on November 15th and 16th, 1946, with a bag limit of five squirrels per day.

Deer—In addition to the deer season provided by statute open seasons were established whereby deer were hunted, killed or destroyed,—

- (a) On November 11th to November 26th, 1946, in Carleton County west of the Rideau River;
- (b) On November 18th to 23rd, both inclusive, in the Counties of Bruce and Grey; and in the Townships of Williamsburgh and Mountain, in the County of Dundas;
- (c) On November 27th to 30th, both inclusive, in the year 1946 in the Townships of Howard and Orford in the County of Kent; Blandford, Blenheim and Nissouri East, in the County of Oxford; Erin and Minto in the County of Wellington; and Esquesing and Nassagaweya in the County of Halton; Puslinch in the County of Wellington.

Rifles were permitted in Bruce and Grey Counties, and in the Township of Mountain in the County of Dundas. In all the other areas listed only shotguns with S.S.G. or buckshot loads, and bow and arrow, were permitted.

A special licence was used in isolated townships.

Beaver—An open season for beaver was established from December 1st to December 21st, both inclusive, in all of Ontario north and west of the French and Mattawa Rivers excepting the district of Rainy River and that portion of Kenora District south of the main line of the C.N.R. and west of the C.N.R. line running from Fort William to Superior Junction. South of the French and Mattawa Rivers, the same season was established in the districts of Parry Sound and Nipissing, the county of Lanark, and the townships of Artemisia, Bentinck, Euphrasia, Glenelg, Holland, Normanby, Proton and Sullivan in the County of Grey.

The bag limit was set at ten beaver per trapper.

Muskrat—Provision was made whereby (including extensions) muskrats were hunted, taken or killed, and the carcass, pelt or any part thereof possessed,—

- (a) On March 6th to April 12th, both inclusive, in the year 1947 in the Counties of Brant, Elgin, Essex, Haldimand, Kent, Lincoln, Norfolk, Oxford, Welland and Wentworth; and those parts of the Counties of Halton, Lambton, Middlesex, Peel, Perth, Waterloo and Wellington lying south of Highway No. 7;
- (b) On March 20th to April 26th, both inclusive, in the year 1947 in the Counties of Bruce, Carleton, Dufferin, Dundas, Durham, Glengarry, Grenville, Grey, Huron, Leeds, Northumberland, Ontario, Peterborough, Prescott, Prince Edward, Russell, Simcoe, Stormont, Victoria and York; and those parts of the Counties of Lambton, Halton, Middlesex, Peel, Perth, Waterloo and Wellington lying north of Highway No. 7; and those parts of the counties of Frontenac, Hastings and Lennox and Addington lying south of Highway No. 7; and that part of the County of Lanark lying south of Highway No. 7 and east of Highways No. 15 and No. 29;
- (c) On March 20th to May 5th, both inclusive, in the year 1947, in the County of Renfrew, the Provisional County of Haliburton and the Districts of Muskoka and Parry Sound; and that part of the District of Nipissing lying south of the Township of Widdifield and the Mattawa River; and those parts of the Counties of Frontenac, Hastings and Lennox and Addington lying north of Highway No. 7; and that part of the County of Lanark lying north of Highway No. 7 and west of Highways No. 15 and No. 29;
- (d) On April 1st to May 21st, both inclusive, in the year 1947, in the Districts of Algoma, Rainy River and Sudbury; and that part of the District of Nipissing lying north of the south boundary of the Township of Widdifield and the Mattawa River;
- (e) On April 1st to May 31st, both inclusive, in the year 1947, in the Districts of Cochrane, Kenora, Patricia, Timiskaming and Thunder Bay.

Migratory Birds—A summary of the Federal Regulations for 1946 as they applied to Ontario follows:—

Open Seasons (both dates inclusive) Woodcock, October 1 to October 31st.

Ducks (other than Eiders),
Geese (other than Brant), Rails, Coots, Gallinules.

Northern District (defined below): September 16th to November 29th.

Throughout the remainder of the Province: September 25 to December 9, except that in the Counties of Essex, Kent and Elgin the open season for geese (other than Brant) shall be from November 1 to January 10.

The Northern District of Ontario is defined as that part of the Province lying north and west of a line described as follows: Commencing at the southwest angle of Bruce County; thence in a general easterly direction along the southerly boundaries of Bruce and Grey Counties to the southwest angle of Nottawasaga Township in the County of Simcoe, along the south boundaries of Nottawasaga, Sunnidale and Vespra Townships to the line of mean high water of Lake Simcoe, along the said line of mean high water on the south side of Lake Simcoe to the northwest angle of Brock Township in the County of Ontario, and along the north boundary of Brock Township to the centre of King's Highway No. 12; thence southerly along the centre line of the said Highway to the centre line of the right-of-way of the Canadian Pacific Railway in the vicinity of Myrtle; thence in a general easterly direction along the said centre line to the city of Peterborough, along the centre line of King's Highway No. 7 to the west boundary of Lanark County, along the west and south boundaries of Lanark County to the line of mean high water on the north side of Rideau Lake, and along the line of mean high water on the north side of Rideau Lake and Rideau River to a point opposite the northeast angle of Grenville County; thence southerly along the east boundary of Grenville County to the northwest angle of Dundas County; thence easterly along the northerly boundaries of Dundas, Stormont and Glengarry Counties to the interprovincial boundary.

Eider Ducks—North of the Quebec-Cochrane-Winnipeg line of the C.N.R.: September 16 to November 15. *Close Seasons*—There is a close season throughout the year on Brant, Swans, Cranes, Wilson's Snipe, all other shore birds except Woodcock, and all migratory non-game and insectivorous birds.

The possession of migratory game birds killed during the open season is allowed in Ontario until March 31 following the open season.

Bag Limits—In any day: Ducks (exclusive of Mergansers), 12, of which not more than 1 may be a Wood Duck; Geese (other than Brant), 5; Rails, Coots and Gallinules, 25; Woodcock, 8. In any open season: Ducks (exclusive of Mergansers) 150; Geese (other than Brant), 25; Woodcock, 100.

Guns, Appliances and Hunting Methods

Forbidden—The use of any automatic (auto-loading) gun with a magazine that has not been permanently plugged or altered so that it cannot carry more than two cartridges, or rifle, or swivel or machine gun, or battery, or any gun larger than number 10 gauge, or any weapon other than a gun or a bow and arrow; and the use of live birds as decoys, or of any aeroplane, power-boat, sail-boat, or night-light, and shooting from any motor or wheeled vehicle or a vehicle to which a draught animal is attached. The hunting of migratory game birds by the use or aid of baiting with grain or other artificial food is prohibited.

Persons using blinds or decoys for hunting migratory game birds are urged to consult the Regulations for details of the restrictions upon this method of hunting.

For special restrictions about hunting on waters of Rondeau Bay, see Regulations.

The shooting of migratory game birds earlier than one-half hour before sunrise or later than one-half hour after sunset is prohibited.

The penalty for violation of the migratory bird laws is a fine of not more than three hundred dollars and not less than ten dollars, or imprisonment for a term not exceeding six months, or both fine and imprisonment.

Wildlife Surveys—

A study of various census methods with respect to the ring-necked pheasant, carried out by the Research Division in southern Ontario. This was extended by the Fish and Wildlife Division to include a study of the history of the pheasant in Ontario in relation to various factors affecting its survival, done by Head Office staff, and a field check of the birds through the pre-hunting season, done by one of the officers who had taken part in pheasant distribution during the summer. The results have already been mentioned. A study of cormorant colonies on Georgian Bay was also carried out. A special pre-season and hunting season check of pheasant numbers was also made on Pelee Island in order to arrive at a formula for estimating the pheasant population there.

Wildlife Harvest—

As a means of checking the success attending hunting in Ontario, a card for recording hunting effort and bag, known as the "Game Bag Census Card" was printed and distributed to hunters.

In addition to these cards we had checks of deer hunters on the highway and various reports of game shipped and exported.

During the hunting season of 1946 the Canadian Pacific Express Company reported handling over its lines in Ontario 689 deer, 41 moose and 41 bear.

Through the ports of Rainy River, Fort Frances and Rainier the following were exported: moose, 200; deer, 3002; caribou, 2; bear, 141; geese, 8; ducks, 2,493. Some of this game was taken outside Ontario, e.g. the caribou.

A check by overseers at the port of Windsor on November 16 (squirrel season) and November 23 showed the following exports of game:

	November 16	November 23
Total cars.....	198	199
Total hunters.....	533	569
European hares.....	575	588
Cottontail rabbits.....	616	576
Squirrels.....	494	...
Deer.....	11	6
Ducks.....	119	143
Bears.....	1	...
Raccoons.....	13	...

At the port of Windsor, the Essex County Sportsmen's Association also checked on four Saturdays in the fall for five hours each, and counted 3,002 hunters and 7,171 rabbits.

It is generally felt that the border area is over-hunted because of its proximity to population centres in the United States and, for that reason, there is strong local objection to non-resident hunters. This is directed impartially against the entire non-resident group.

The Gravenhurst road check showed the following for the period November 7th to November 21st. It is compared with a check from November 6th to November 19th, 1941.

	1946	1941
Hunters.....	7,389	4,264
Moose.....	2	5
Deer.....	3,280	3,001
Bear.....	62	48
Wolves.....	3	1

At Pelee Island, a complete count was made of the pheasants killed during the open season, and by means of certain additional counts, the following figures were ascertained concerning pheasants on Pelee Island:

Number of hens before open season.....	5,160
Number of cocks before open season.....	5,263
Number of cocks killed.....	4,615
Number of hens (illegally) killed.....	300
Number of hens after the open season.....	4,860
Number of cocks after the open season.....	648

All of these figures except the actual kill should be rounded off, but it may be taken that there were at least 10,000 birds on the island before the shoot, and at least 4,000 hens and 600 cocks left after the shoot.

The Game Bag Census Cards indicated that, by those reporting in 1946, there were 0.7 deer killed per hunter, and the number of deer killed per hunter-day was 0.09. The area covered was much larger than that funnelled through the road block and included portions where deer were very abundant.

Only 8% of the hunters reporting were hunting ducks, and some of these may have hunted only incidentally. Only 5% as much time was spent on duck-hunting as on deer hunting, by hunters reporting.

Wildlife Library

A start was made on the assembling of a library on wildlife management. Contributions and exchanges will be welcomed.

Wildlife Research

Close co-operation was maintained with wildlife research parties from the Research Division.

Technical Personnel

At present there is a serious lack in Ontario of men trained in wildlife management. A few service men have shown an interest in the subject and are taking up studies at universities which will give them basic knowledge, but they will not be available for employment for several years, during which time essential work is certain to be delayed.

Fur Farming

The decided slump in the raw fur market during 1946 was responsible for mink ranchers receiving up to 25% less for their furs than they received last year. The demand for long hair furs, principally fox, declined to such an extent that auction houses reported only 10 to 20% clearances and in some cases, the prices offered were so low that the entire offering of fox was withdrawn. Many fox ranchers realized prices equal only to production costs.

This condition, together with the rising costs of feed, building materials and labour has harassed the fur farmer, and caution in the purchase of breeding stock and production is the keynote for the coming year.

During the calendar year 1946, 1,502 Fur Farmers' licences were issued, 1,187 being renewals of previous licences and 315 for newly established fur farms.

Mink and fox continued to be the principal species propagated on ranches and Departmental records show that during the fiscal year 1946-47 fur farmers disposed of their production of these species in the following manner:—

Species	Tanned	Exported	Total
Mink	2,788	70,982	73,770
Silver Fox	3,294	23,058	26,352

The following table shows the location by County and Districts of licensed fur farms in Ontario:—

County or District	Number	County or District	Number
Algoma	21	Middlesex	51

Wolf Bounty

At the 1946 session of the Ontario Legislature, The Wolf Bounty Act and The Wolf Bounty Amendment Act, 1941, were repealed, and The Wolf and Bear Bounty Act, 1946 was enacted.

This Act authorized the payment of \$25.00 as bounty on a timber or brush wolf three months of age or over and \$5.00 as bounty on a timber or brush wolf under the age of three months.

It will be noted from the following comparative table that more wolves were taken during this last fiscal year than in any year shown, and it is interesting to note the marked increase in the number of brush wolves taken. The total number of wolves taken is unusually large and may indicate that the natural peak in population has been reached, and will probably recede during the next few years.

Period	Timber	Brush	Pups	Total	Bounty and Expenses
For year ending March 31, 1943	935	497	32	1,464	\$33,606.62
For year ending March 31, 1944	1,302	731	32	2,065	46,545.75
For year ending March 31, 1945	1,321	665	12	1,998	45,993.58
For year ending March 31, 1946	1,266	777	30	2,073	44,999.87
For year ending March 31, 1947	1,440	1,182	42	2,664	59,275.18

The following is a summary of the number of wolves taken in each of the Counties and Districts, on which bounty was claimed during the fiscal year ending March 31, 1947:-

COUNTIES

Total.....	1,370	816	16

A total of 1,812 applications for bounty on 2,622 wolves and 42 pups were submitted. However, bounty was allowed on 2,609 wolves and 38 pups with 13 applications concerning 13 wolves and 4 pups being refused for various reasons.

Bear Bounty

The Order-in-Council dated August 19th, 1942, which authorized the payment of Bear Bounty was superseded by the enactment of The Wolf and Bear Bounty Act, 1946.

The conditions on which bounty is paid under this Act however, are essentially the same. A \$10.00 bounty is paid on any bear 12 months of age or over and \$5.00 on any bear under 12 months of age, which has been killed between April 15th and November 30th in Townships located in certain Counties and Districts and of which 25% of the total area is devoted to agriculture. The Act further specifies that the bear must be killed in defence or preservation of live stock or property, by a bona fide resident of the Township.

The following table indicates the number of bears and cubs killed in each of the Counties and Districts on which applications for bounty have been received during the fiscal year ending March 31, 1947. Some 816 applications on 959 bears and 73 cubs were submitted. Of these, bounty was paid on 937 bears and 73 cubs and 13 claims concerning 22 bear were refused.

GAME FISH

During the fiscal year ending March 31, 1947, twenty-seven Hatcheries and Rearing Stations were operated successfully. No new plants or additions were established during the course of the year.

For the culture of game fish, the development of rearing stations or a combination of hatcheries and rearing stations instead of a hatchery only, is in keeping with the progressive developments in this field. A hatchery may be defined as a building in which is housed all the necessary equipment for hatching and rearing of fish to the fry or advanced fingerling stages. A rearing station is an extension of this arrangement, that is, large tanks, raceways or ponds being provided for accommodating fish from the fingerling to yearling or adult stages.

Of the twenty-seven stations, eleven are provided with hatcheries only, three with a combination of hatcheries and ponds, eight with a combination of hatcheries, raceways and ponds. Speckled trout are cultured at fourteen stations, rainbow trout at two, brown trout at six, Kamloops trout at one, lake trout at ten, largemouth bass at one, smallmouth bass at seven, maskinonge at one, perch at one, yellow pickerel at eleven, whitefish at nine, herring at two and minnows at one.

There are facilities at three rearing stations for retaining a selective stock of adult speckled trout for breeding purposes. These are maintained at Dorion, Sault Ste. Marie and Hills Lake Hatcheries. A breeding stock of brown, rainbow and Kamloops trout are provided for at one other station, namely, Normandale.

Practically all the speckled trout, brown trout and Kamloops trout distributed to suitable and publicly fished waters are yearlings or older fish. Black bass, maskinonge, rainbow trout and lake trout are, generally speaking, distributed in the fry or fingerling stages. The raising of lake trout to the yearling stage has been developed successfully at certain stations and when additional pond space is available, expansion of the culture of lake trout in this direction may be undertaken. Whitefish, herring, perch, yellow pickerel and blue pickerel are all distributed in the fry stage.

THE CULTURE AND DISTRIBUTION OF FISH

Fish culture may be defined as any procedure for increasing the stock of fish. One of the procedures used extensively in Ontario is the planting of hatchery raised fish. In the majority of cases, this procedure is a supplement and not a substitute for nature's means of replenishment.

A detailed account of the fish distribution from our twenty-seven stations by county or district, species, age class and numbers planted is given in appendices one to five inclusive. In the following paragraphs, comparison of the year's distribution with that of the previous year, and other pertinent data are given. The total output of all species for the year was practically the same as in 1945.

Speckled Trout

As in previous years, the objective was the distribution of 3,000,000 speckled trout yearlings, but the figures were somewhat lower, namely, 2,760,780. Due to congestion at two or three of our stations it was necessary to plant about 85,000 fingerlings. As our stock of breeders was quite good, we were able to

make a distribution of double that of the previous year. The plantings of this species by age group is as follows:

50,000 fry
84,730 fingerlings
2,760,780 yearlings
8,656 adults

Brown Trout

The plantings of brown trout yearlings were good, with a total of 268,940 being distributed. This was an increase of 20% over the previous year's distribution. In addition, we had a surplus of fingerlings which we could not hold for another year, and these made a distribution of 133,025. Taken together, the figures for this distribution were excellent, considering the number of ponds which we have available for the raising of brown trout.

Rainbow Trout

(a) *Steelhead*. It is only in the larger rivers and lakes that rainbow trout are normally found except in their immature stage. A river such as the Nottawasaga is a good example in which rainbows remain throughout the year. They survive chiefly in the larger lakes such as Lake Simcoe and the Great Lakes. Distribution this year was mainly confined to the larger rivers flowing into the Georgian Bay.

(b) *Kamloops*. This species was introduced to a number of carefully selected lakes in Ontario, and the Kamloops in these lakes are showing excellent results during the last few years. Up to now, the practice has been to distribute this species in the yearling stage, but this year there was a distribution of 4,850 as adults, which was an excellent contribution to the culture of this species in Ontario.

Lake Trout

For the last several years there has been a decline in the production in the spawn collection of this species. Steps are now being taken by the Department to ascertain the fact responsible for the decline, with a view to providing a remedy. The distribution in 1946 shows a sharp drop over that recorded in 1945. As stated above, this is wholly due to the fact that our hatcheries are not getting the spawn in such large numbers as previously. The distribution of 28,045 yearlings was a considerable decline over the previous year as the hatcheries were not able to retain as many fingerlings from the previous year as had been done formerly.

Whitefish

The spawn collection of this species was considerably down from the previous year. This gives the reason for the slight decline in the plantings, as shown in the tables.

Herring

In comparison with the last few years, the distribution of herring was really excellent. There was a total planting of 69,674,000. This large increase was wholly due to a very good run of herring in the spawning season, together with a week of good weather, when our spawn takers can work at their best.

Yellow Pickerel

There was a planting of 142,385,000 fry this year which was a decline of about 20% from the previous year. The drop in the distribution was accounted for solely from the fact that the fish could not be captured in large enough quantities during the spawning season. The chief spawn taking areas where

decrease in spawn occurred were Hay Bay in the Bay of Quinte, Echo Lake in Algoma, Whitefish Falls in the North Channel. All our other spawning grounds were as good or even better than in previous years.

Small-mouth Bass

The number of bass fry planted was approximately 14% less than planted in the previous year. The production of fingerlings was also down, but only 10% from last year.

Large-mouth Bass

There was an increase of 90% in the output of this species over last year. This was very gratifying as there is only one small pond available for this work at our Mount Pleasant Hatchery. Instead of planting some of these fish as fry we were able to hold over our stock until they were good sized fingerlings.

Perch

The take of perch spawn in Lake Erie is subject to wide variation. This spawn is collected mainly from the region off Kingsville. This year we had a good spawn collection and we were able to make a 70% increase in our fry distribution. The total fry planted was 20,450,000.

Maskinonge

The plantings of this species were as follows:

1,150,000 fry
6,875 fingerlings

There was a drop of 43% in the number of fry produced, but this was more than offset by the record production of fingerlings. The fingerling production was an all time record from our Deer Lake Hatchery. There is reason to believe that these figures will be sustained, or even increased, as greater facilities are being given the hatchery.

Atlantic Salmon

There was a distribution this year of more than double that made in the previous year. All the fish planted were fingerlings of good size. A more detailed report on Atlantic Salmon will be found under the heading "Biological Surveys".

CLOSED WATERS

In addition to the waters already closed for the natural production and propagation of fish, the following were closed during the period April 1, 1946 to March 31, 1947.

Adam Lake, located in unorganized territory, north of Clay Lake and between Fluke Lake and Segise Lake, District of Kenora.

The Bog, Newboro Lake, located in township of South Crosby, County of Leeds.

Deep Bay, Sparrow Lake, township of Matchedash, County of Simcoe.

Harvey or Nogies Creek (Part), located on lot 10, Con. 2, Township of Galway, and lot 28, Con. 17, township of Harvey, County of Peterboro.

Long Lake, located in the township of Lansdowne, County of Leeds.

Landons Bay, located on the St. Lawrence River, township of Lansdowne, County of Leeds.

Maskinonge Creek flowing from Maskinonge Lake to Little Vermillion Lake; Maskinonge Lake (Part); Little Vermillion Lake (Part) located in the township of Pickerel, District of Kenora.

Moose Lake located in unorganized territory west of the Township of Smellie, District of Kenora.

BIOLOGICAL SURVEYS

The Game Fish Section expanded their work, especially in respect of biological surveys. Surveys were conducted on a great many lakes and streams to obtain data basic to the fish management plan. This included four lakes in Frontenac County, one in each of Lennox and Addington and Hastings Counties, three in Nipissing District, five in Parry Sound District and several minor waters.

A project was undertaken to assess the value of planting streams in Bruce County with hatchery raised speckled trout. The trout were planted as yearlings in parts of the Sydenham River, Eugenia Hydro Pond and Williams Lake, and were marked by removal of the adipose fin. A careful check on all of the fish taken from these waters is being obtained by means of the creel census. The experiment is being continued.

An experiment begun in 1945, was continued at Round Lake, Renfrew County, to determine the effect of removal of coarse fish in quantity, from a lake. The lake was heavily fished by means of trap and hoop nets, the coarse fish removed and the game fish returned to the lake. This experiment is continuing.

Creel census surveys and assessment of waters was continued in Sibley Provincial Park.

Preliminary investigations were begun to obtain information concerning the life history and possible means of control of the Sea Lamprey. Deterioration of the lake trout fishery of the Great Lakes, particularly in Lake Huron and Georgian Bay, is attributed to the abundance of this fish parasite. This most important work was begun in the waters of Lake Huron adjacent to Bruce County, and is continuing.

An extensive survey of lakes in which Kamloops Trout have been introduced was undertaken. These waters included Lake Bernard and Poole Lake, Parry Sound District, Echo Lake, Rill Lake, Clear Lake, Red Chalk Lake, Lake Wascosa, Round Lake and Deep Lake, Muskoka District and Lake Timagami, Nipissing District. Assessment of fishing for this excellent game fish was made. With the exception of Lake Timagami, the Kamloops trout appears to have become well established in all of the lakes noted and is providing fair to good fishing.

The Atlantic Salmon experiment, which was begun in 1944 in Duffin's Creek, Ontario County, was continued. The experiment is being conducted for two reasons. First, an effort is being made to establish the Atlantic Salmon in Lake Ontario and its tributary streams, where it was formerly abundant, and second, an effort is being made to secure an appraisal of the efficiency of restocking streams with hatchery raised fish. As this is a long term investigation, it is too early to draw conclusions, though it may be stated that some of the fish that were planted in 1944 have been recaptured, and are showing satisfactory growth. Generally speaking, the results are encouraging.

Coarse fish removal was undertaken and results shown as follows:

Removal of Burbot (Ling) from Bobs Lake in 1947.

Location, Frontenac and Leeds County, township of North Crosby.

APPENDIX No. 1

SUMMARY OF FISH DISTRIBUTION
For fiscal year April 1, 1946 to March 31, 1947

Whitefish	205,590,000
Herring	69,674,000
Lake Trout	5,902,240
Pickeral	142,385,000
Perch	20,450,000
Maskinonge	1,156,875
Atlantic Salmon	88,210
Brown Trout	401,965
Kamloops Trout	4,850
Rainbow Trout	1,610
Speckled Trout	2,904,166
Small-mouth Bass	702,128
Large-mouth Bass	9,527
Total	149,270,571

APPENDIX No. 2

COMMERCIAL FISHING

Insofar as the Commercial Fisheries Section of the Division of Fish and Wildlife is concerned, the fiscal year ending March 31, 1947, was largely devoted to reorganization, with a view to establishing more direct contact with the fishermen themselves and thereby increasing the service rendered to them, both individually and through their organizations. Particular attention was given to matters concerning legislation and toward the securing of an adequate statistical set-up to use as a basis for the development of a sound management policy.

The commercial fisheries maintained in our Northern Inland waters caught and marketed over 14 percent of the total catch for Ontario in 1946. Since most of this fishing is done in small inland lakes, it is obvious that commercial fishing operations, unrestricted as to size of catch, could quite easily result in depletion of certain species. With this in mind, a system of budgeting the catch of individual licences was instituted in the spring of 1947. Based on the previous production records the catch was limited for certain species. This ceiling on catch was placed on a level at which it was thought production could be maintained by leaving sufficient stock in the lake. This limit was set on a flexible basis and with a view to changing it from year to year, as conditions warranted. The possibility of the level being raised at a future date, is as great as that it will be lowered, or maintained at the level previously set.

At the time the Department of Game and Fisheries was taken over by the Department of Lands and Forests and formed into what is now known as the Division of Fish and Wildlife, it was decided to bring into being a new method of obtaining statistical data regarding the commercial fishing industry of the Province. This new system would thus enable the Department to have on hand a more detailed collection of data, which heretofore was not available.

Up to the present time the only information obtainable is the data submitted by each holder of a commercial fishing licence at the end of each year. These returns are totalled and made up into an Annual Report, as shown in the two appendices under the headings "Equipment" and "Quantities of Fish Taken". There is, however, no way of obtaining from this Annual Report under the heading "Quantities of Fish Taken" any information as to what month the fish were taken, or from what area or district of a lake the fish were taken. There is also no way of obtaining from this Annual Report, under both the "Equipment" and "Catch" heading, any information regarding the type of gear used to take any particular species, or the amount of gear used to take any particular species. This Annual Report, therefore, gives only the total catch by lake or area of each species of fish taken that year, which is of value in itself, but is not sufficient for a further statistical analysis.

It was felt, therefore, that in order to properly administer the commercial fisheries, it was essential to have statistical data on hand that would show an indication of the changes in the abundance of the commercial species. It was essential that this data must, therefore, include a record, not only of the quantities of fish taken, but also of the extent of the fishing operations that led to that catch or, in other words, the effort that was put forth to obtain that catch. The true condition of the fisheries, therefore, cannot be measured accurately by statistics of catch alone but should be expressed in terms of production in relation to fishing intensity, that is, "catch per unit of fishing effort".

With this in mind the Department created a new system by which all licensed fishermen were required to report their daily fishing activities. Under this system all commercial fishermen must submit at the end of each month a

complete record of their daily fishing activities. This plan of reporting was adopted from the monthly report system now in effect in the State of Michigan and other states bordering the Great Lakes, where it has been enforced now for some fifteen years with very satisfactory results. The monthly report includes such required data on each day's fishing activities as, the month in which the fishing was done, the fishing locality (that is, lake and the section of that lake), the kind and amount of gear fished and the catch in pounds of each species taken.

In order to be able to obtain data for individual areas or districts within a lake, all of the Great Lakes have been divided into statistical districts, in such a way so as to make the districts on the Ontario side of the Great Lakes comparable to the similar districts on the United States side. Therefore, it is hoped that data on the commercial fishing in the Great Lakes will be on a more uniform basis, as many of the States bordering the Great Lakes as well as the Province of Ontario, have adopted this statistical system of collecting records. By having our districts coinciding as near as possible with those on the United States side of the Great Lakes, a more complete picture can be presented.

The reports are sorted according to the month, the district, and the type of gear, and at the end of each year a complete statistical analysis will be made from these reports. This analysis will make possible an estimation of the annual fluctuations and the abundance of the different commercial species in the various statistical districts, as these fluctuations are reflected in the "catch per net". It is hoped, therefore, to have on hand, data for each of the commercial species of fish in the Province, as to the quantity of fish taken, the amount of gear used to take that catch, the month in which it was taken, and the area of a district of a lake from where it was taken.

These monthly reports do not include any information such as the number of men employed per licence, the amount of gear on hand and the value of same, and with this in mind it has been decided to continue with the Annual Report, as it will be used to obtain these facts and also to show the total catch of a lake by species by year.

At first, the monthly reports were incomplete and individual reports were often faulty. It is not felt that any reliable data will be obtained from the reports of 1946 and 1947, as it will take some little time before the system is properly functioning and all fishermen are reporting correctly each month. It is hoped that by the beginning of 1948 this system should be sufficiently established to be able to make an analysis of the data obtained during the months of 1948.

The overall picture of the commercial fisheries in Ontario in 1946, showed a net decrease of 1,277,624 pounds as compared with 1945. This reduction in catch was spread throughout the fishery in general and at the same time there was an increase in the gear used. This would indicate that the fisheries throughout the Province were even less productive than the statistics of catch alone would indicate when comparison is made with 1945.

In 1946, Lake Erie produced over half the total catch for the whole Province. The productive capacity of this lake is fairly stable, although there are, of course, some years in which the catch drops to a low ebb and in other years, reaches a peak. However, this catch in general tends to level off since the reduction in numbers of one species, in any one year, usually is replaced by an increased production of another or several other species in that year. It is notable that although there was a decrease of 4,649,899 lbs. in the catch of blue pickerel in Lake Erie, the net decrease in total catch for the lake was only 24,233 lbs.

Lake Superior and Lake Ontario are also maintaining a fairly stable level, despite the fact that the catch is down in each case this year. While these lakes are not as productive as Lake Erie and they do not have as great a variety of fish entering the catch, the fishing effort is not as intensive. The latter may account in part for the relative stability of the total catch.

The fisheries in Lake Huron, Georgian Bay and North Channel are at a very low ebb at present, due to the fact that the lake trout and whitefish catches have decreased tremendously during the past six years.

The total catch from northern inland waters was less in 1946 than in 1945, whereas the total catch from southern inland waters (largely bullheads, carp and other coarse fish) shows a slight increase.

DIGGING A FIRE LINE IN AWREY TOWNSHIP

DIVISION OF FOREST PROTECTION

FIRE AND HAZARD CONDITIONS

The fire season was, on the whole, a fairly moderate one. The number of fires was above the average, but the area burned over was relatively small. The warm weather at the end of March created a fairly high hazard in the eastern part of the Province for a short period, but in general the weather was favourable during April and May. There was a high hazard in the western part of the Province during the first part of June and in the Sudbury and Parry Sound Districts during the latter part of July and first part of August, but apart from a short period of high hazard in the early part of October in the same two districts, there were no acute or prolonged hazards in the latter part of the summer.

LEGISLATION

An Act to amend The Forest Fires Prevention Act (Bill No. 98) was passed at the 1946 session of the Legislature and became law on June 5, 1946. The more important changes are:

1. The office of Provincial Forester is abolished.
2. Provision made to enter into agreements with municipalities for prevention and control of fires.
3. Provision for the entire cost of extinguishing fires confined to Crown Land to be borne by the Department.
4. Onus of proof placed upon permittee where fire originates in an area in which summer operations are being carried on.
5. Section 24 requiring employees of operators to wear badges was repealed.

An Order-in-Council revising the Regulations under The Forest Fires Prevention Act was passed on July 4th, 1946. This made some changes in the general regulations and in the boundaries of the fire districts and travel permit areas.

Due to hazardous fire conditions, eight areas in Cochrane District were closed to travel for ten days in the first part of August and a section of the Mississagi Road in Sault Ste. Marie District was closed to travel from August 5 to September 13.

The number of prosecutions for breaches of the Forest Fires Prevention Act was seventeen, all but three of which resulted in convictions.

ORGANIZATION

On December 1, 1946 Mr. C. R. Mills resigned as Chief of the Division of Forest Protection and was replaced by Mr. T. E. Mackey, who was formerly Regional Forester at North Bay.

By Order-in-Council dated July 4, 1946, Manitoulin and Cockburn Islands and Lots 16 to 53 of the Wild Land Reserve in the Municipality of Atwood were removed from the Fire District and the townships of Morson, McCrosson and Tovell were added to the Fire District.

On April 1, 1946, Chapleau and Biscotasing Divisions of Sudbury District were formed into a new district known as Chapleau District, with headquarters at Chapleau, and Gogama and Foleyet Divisions and part of Capreol Division were formed into a new District known as Gogama District, with headquarters at Gogama.

On May 1, 1946, Mr. J. W. Jones and Mr. R. K. Strang were transferred from the Main Office of the Department of Game and Fisheries to the Division of Forest Protection. Mr. Jones will continue in the capacity of Superintendent of Construction and Mr. Strang as Mechanical Supervisor.

During July and August the fire ranging staff was again augmented by some eighty high school students who did valuable work on improvements and on fire suppression.

EQUIPMENT

There were no new developments during the past fiscal year.

IMPROVEMENTS

Some ranger cabins and smaller headquarters buildings were constructed and some telephone lines built but no extensive building programme was carried out due to shortage of materials.

The Department of Public Works continued the construction of buildings at the Forest Ranger School. The buildings completed to date are a dormitory, boiler house and heating plant, dining hall and kitchen with living quarters for kitchen staff. Underway are a workshop and garage, the Director's house and Administration Office, the school building and two fire hydrant and hose houses.

Total Improvements Completed to March 31, 1947

Cabins	547
Storehouses	152
Boathouses	60
Combined Storehouses and Boathouses	27
Bunkhouses	62
Offices	36
Garages & Car Houses	89
Other Buildings	213
Hose Towers	63
Wooden Lookout Towers	52
Steel Lookout Towers	227
Telephone Lines (miles)	3740

An additional four radio equipped aircraft were added to the Division of Air Service bringing the total to 20, with the following distribution:

CF-OAV—Kenora District
 CF-OAW—Geraldton District
 CF-OAY—Cochrane District
 CF-OBA—Sault Ste. Marie District
 CF-OBB—Sioux Lookout District
 CF-BGJ—Kapuskasing District
 CF-BGM—Algonquin District
 CF-BGN—Sioux Lookout District
 CF-OBC—Sioux Lookout District
 CF-OBD—Kenora District
 CF-OBE—Port Arthur District
 CF-OBF—Sudbury District
 CF-OBG—Port Arthur District
 CF-OBH—Sault Ste. Marie District
 CF-OB I—Sioux Lookout District
 CF-OB J—North Bay District
 CF-OB L—Port Arthur District
 CF-OB M—Fort Frances District
 CF-OB N—Geraldton District
 CF-OB O—Sudbury District

Fourteen Model 30, four frequency transmitters were constructed in the Department's shops, with distribution as follows:

Fort Frances District.....	1	Kapuskasing District.....	4
Kenora District.....	1	Cochrane District.....	1
Sioux Lookout District.....	1	North Bay District.....	1
Port Arthur District.....	2	Sault Ste. Marie District.....	1
Geraldton District.....	2		

Seventeen all-wave communication receivers were purchased for the above transmitters, and eight High Frequency tower trans-receivers obtained and distributed throughout the Algonquin District.

HAZARD DISPOSAL

A certain amount of hazard clearing was carried out. The fire guard at Larder Lake was extended by an additional 30 acre clearing and work was done on the fire guard at Biscotasing. Hazard clearing was carried out along the Nipigon-Beardmore Highway and along three roads in Sudbury and Gogama Districts.

INSECT CONTROL

The Forest Insect Laboratory at Sault Ste. Marie was in full operation during the year, the Department of Agriculture, Canada carrying on investigative work in forest entomology throughout the Province and administering the forest insect survey.

BEAUTIFUL COTTAGE SITES ARE AVAILABLE ON CROWN LANDS.

DIVISION OF LAND AND RECREATIONAL AREAS

The volume of work completed in connection with certain phases of land administration increased during the last fiscal year, as will be seen by the tables and graphs forming part of this Section. This is due to more advanced methods of administration, a properly trained staff, and improved inspection facilities. More rapid handling of current transactions and a continued increase in the number of long outstanding cases brought to a satisfactory conclusion have been gratifying.

Summer Resort Lands

Sales of summer resort lands, for both private and commercial use, increased over an all-time high during the fiscal year 1945-46, and although the number of patents issued also increased, the increase would have been considerably greater had it been possible to secure the services of Ontario Land Surveyors to do the necessary survey work.

Agricultural and Allied Uses

An increase in the number of transactions completed involving lands for special use, agricultural lands in sale townships, and agricultural lands in free grant townships, collectively, is shown. It was expected that the sale of land for this purpose would decrease, in that it was assumed that the demand would fall off, due to continued favorable economic conditions. The large percentage of sales and patents completed, especially under the special use section, is the result directly of improved methods of administration, inspection facilities, and more efficiently trained staff, as stated above.

Provincial Parks

There was no change made in the status of Provincial Parks, of which there are six, as follows:

Algonquin.....	2,741 Sq. Miles
Quetico.....	1,720 Sq. Miles
Rondeau.....	8 Sq. Miles
Lake Superior.....	540 Sq. Miles
Sibley.....	63 Sq. Miles
Ipperwash Beach.....	109 Acres

Veterans' Lands

An agreement was concluded between the Dominion and Provincial Governments, which became effective on April 10th, 1966, and which provides for the establishment of qualified veterans on Crown lands in Ontario. The agreement is generally known as "The Ontario Dominion-Provincial Agreement" and it was made under and by virtue of Section 35 of the Veterans' Land Act (Dominion) 1942. The Provincial Government is responsible under the agreement for the allocation of Provincial lands, providing inspection reports and extending all services ordinarily provided for persons other than veterans. At the close of the first year of operation, agreements for sale and licenses of occupation, completed, total nineteen. Twelve applications are pending, and two were cancelled. These transactions are summarized in the table included herein. It is expected that the number of cases which will be referred to this Department for consideration during the ensuing year will be considerably increased. The opportunities available to qualified veterans have been more fully advertised, resulting in steadily increasing interest to participate, particularly due to the fact that the

assistance granted is not repayable; payment of purchase price of land in the case of first-land application is waived by the Province, and in the case of the veteran, who has actively served in the armed services overseas, or one full year in Canada, and has resumed residence and settlement duties, he is absolved from payment of all amounts of principal and interest which may be owing in respect of land purchase price and improvement charges.

Tourist Outfitters' Camps

A prosperous tourist trade during the 1945 season, exceeding the pre-war volume, served to stimulate the growing interest in post-war expansion. Whereas the erection of 149 new camps was authorized the previous year, over 400 applications for permits were considered in 1946, of which 328 were granted as at March 31st, 1947. There was also much activity in the rehabilitation and expansion of established camps. The acute shortage of basic building materials did, however, retard the anticipated expansion in the industry, as only 171 new camps were completed and licensed to operate. 856 current licenses were issued, an annual increase of 35%, including 51 camps which had not operated during the war. 111 licenses were issued at a non-resident fee of \$25.00 each, and 745 at a resident fee of \$10.00 each. (See table).

DIVISION OF LAW

The primary duties of the Division are as indicated in the Administrative Chart.

As a result of the previous Department of Game and Fisheries coming under the administration of the Department of Lands and Forests, as the Division of Fish and Wildlife, the work of the Law Division was considerably increased. The Game and Fisheries Act, 1946, is a revision of the Act which formerly was in effect, and considerable time was necessary in connection with the preparation of the many regulations which are required under the provisions of the Act.

Amendments were made to ten Acts governing the administration of the Department, and The Forest Management Act was created. This Act permits the Minister to require timber operators on Crown land to submit estimated inventories of the timber on the cutting-area respecting age, species, size and type, and management plans concerning the utilization of the timber.

An amendment to The Townsites Act provides that the Crown shall not claim any percentage of land in a subdivision plan of land which has been patented for upwards of five years prior to the time of making the subdivision.

An amendment to The Crown Timber Act permits the Minister, with the approval of the Lieutenant-Governor in Council, to enter into long-term timber concession agreements concerning all species of timber.

An amendment to The Cullers Act allows the Lieutenant-Governor in Council to make regulations with respect to standardization of the measurement of timber cut on Crown lands.

An amendment to The Public Lands Act allows the issue of letters patent to the widow of a locatee.

During the year, the policy of dealing with trespass cases, where a person committing a trespass had no authority to cut, by laying a charge of theft of trees under the Criminal Code, was actively followed. In the majority of such charges convictions were made, and it is felt that this policy will reduce unauthorized timber-cutting.

The following is a recapitulation of charges laid under the Criminal Code and for offences against provincial statutes and regulations:

<i>Acts</i>	<i>Charges</i>	<i>Convictions</i>	<i>Acquittals</i>
Game and Fisheries Act.....	1,510	1,433	77
Forest Fires Prevention Act.....	17	14	3
Provincial Parks Act.....	2	2	0
Crown Timber Act.....	1	1	0

During the year one timber concession agreement and two supplementary agreements concerning main agreements previously in force were prepared.

Various field trips were made by the Chief of the Division to District Offices concerning matters requiring legal attention.

DIVISION OF OPERATION AND PERSONNEL

The termination of hostilities with Germany in May, 1945, and with Japan in August, 1945, initiated the retooling of industry and diverted the flow of personnel from the Armed Forces and industry to other channels. As a result of the processes of reconversion in the personnel and supply fields, the situation, as far as the Department is concerned, has been greatly eased. Urgently needed supplies have been a little more readily obtained and in somewhat greater volume, but still do not entirely meet our requirements.

For some time there was considerable difficulty in obtaining suitable qualified stenographic personnel, and desks and other office furniture are still most difficult to obtain. As younger people return to pre-war perspectives and as adolescents who have been obtaining the wages usually paid to adults are eliminated from industry, this situation may be considerably bettered. It is anticipated, too, that the training programmes of the Canadian Vocational schools will be a means of providing numbers of properly trained personnel.

During this year, eight new administrative districts were created, with the result that the greater part of the Province south of the Albany River is now under administrative district organization. The creation of these new districts will provide more effective administration.

On November 28th, 1946, the Honourable H. R. Scott was appointed Minister of the Department in succession to the Honourable W. G. Thompson, who had resigned.

In April, the Department of Game and Fisheries was amalgamated with the Department of Lands and Forests, and a new Departmental Division known as the Division of Fish and Wildlife was created. Certain functions of Fish and Wildlife Management both at Head Office and in the field were centralized in this Division. Other administrative functions of the Department of Game and Fisheries have been allocated to the appropriate Divisions already established in this Department.

The staff of the former Department of Game and Fisheries was redistributed, the majority of them being allocated to the Division of Fish and Wildlife and the remainder to the other Divisions of the Department. The field staff became a part of the various administrative district organizations. By this process, the Department of Lands and Forests became responsible for the administration of the natural resources within the Province of Ontario with the single exception of those within the purview of the Department of Mines. Changes effected are dealt with in that part of this annual report devoted to the Division of Fish and Wildlife.

A Forest Resources Inventory organization was created in the Division of Timber Management. The details of this organization appear in the section of this report devoted to that Division.

Due to over-crowding at Head Office where the per capita space is at an absolute minimum, the Aerial Surveys section of the Division of Surveys and Engineering was transferred from the Parliament Buildings to the DeHavilland plant on Sheppard Avenue, where it continues to function as a section of that Division.

The organization as of the end of the fiscal year, therefore, is as follows:

HEAD OFFICE, TORONTO

Minister—HON. W. G. THOMPSON (to November 28, 1946)

Game fish management.
Supervision of hatcheries
and spawn collection.
Distribution of young fish.
Removal of coarse fish.
Closure of fishing waters.
Biological studies.
Surveys and investigations.

Supervision of—
Prevention and suppression
of forest fires and insect
disease damage.
Construction and mainte-
nance of Forest Protection
and Fish and Wildlife
buildings, towers and tele-
phone lines.
Maintenance and storage of
fire fighting equipment.
Disposal of fire hazards.
Staff appropriations and
expenditures.

Control of—
Radio and telephone com-
munication systems.
Use of equipment, buildings
and other improvements.
Expenditures pertaining to
forest protection.
Statistics and records.
Requisitioning of equip-
ment.
Compilation of estimates.

Administration of—
Forest Protection under the
Forest Fires Prevention
Act.
Railway fires under Board of
Transport Commissioners.
Agreements with organized
municipalities.
Travel and hunting permit
systems.

Maintenance of—
Records of all land disposi-
tions.
Examining and checking all
documents issued.
Issuance of instructions to
Field offices.
Interpretation of the Acts.

Selling, leasing and licensing of
Crown Lands for—

Farming and allied uses,
summer resorts and all other
purposes excepting for dam
sites, rights-of-way for elec-
tric power and telephone
lines, or for hydro-electric
power developments.
Maintenance and storage of
fire fighting equipment.
Disposal of fire hazards.
Staff appropriations and
expenditures.

Administration of all Provincial
Parks—
Leasing and licensing of
land for summer resort use.
Collection of fees.
Directing administration.

Land Use Planning—
For summer resort, agricul-
ture and other uses.

Land Inspections—
To ensure proper use of
land.
Eligibility to acquire patent
lease or licence.

Preparation of—
Land Manuals, pamphlets,
forms, legislation, patents,
leases, licences of occupation
and land transfers.

Preparation of—
Legislation, regulations,
timber agreements and vest-
ing orders.
Recommendations to Legis-
lative Council.
Special patents, land trans-
fers, deeds, leases; and
various agreements and
other miscellaneous docu-
ments of a legal nature.

Legal advice on—
Interpretation and applica-
tion of statutes, regulations
and orders-in-council.
Consulting with and advis-
ing Head Office and Field
Staff on all Departmental
matters of a legal nature.
Correspondence with and
attendance upon private and
corporate interests having
various grievances which are
extra-Departmental.

Arbitration of—
Disputes—Claims.
Appeals re Land Tax col-
lections.
Conducting litigation.
Examination and checking of
patents, leases and licen-
ces-of-occupation.

Maintenance of—
Records of all land disposi-
tions.
Examining and checking all
documents issued.
Issuance of instructions to
Field offices.
Interpretation of the Acts.

Preparation of—
Legislation, regulations,
timber agreements and vest-
ing orders.
Recommendations to Legis-
lative Council.
Special patents, land trans-
fers, deeds, leases; and
various agreements and
other miscellaneous docu-
ments of a legal nature.

Personal Management—
Interviewing, selection, ap-
pointment, classification.
Staff welfare, salary rating.
Administrative statistics.
Attendance, staff and per-
manent records.
Workmen's compensation.
Maintenance—Messengers.
Training, Order-in-Council.

Office Management—
Purchase and distribution of
all equipment and supplies,
and stock control.
Inventory. Locating and
expediting supplies.
Disputing. Issue—Re-
ceipts.
Distribution printed matter.
Sealing—Space adjust-
ments.

Information and Education—
Correspondence—
General Inquiries.
Departmental Routine
Publications—
Editing, writing, rewrites,
printing, distribution.

Public Affairs—
Principally in forest fire pre-
vention and Fish and Wild-
life Conservation.
Lecture tours in schools,
logging camps, outfitters'
camps, fish and game asso-
ciations, on conservation.
Photographs, slides, motion
pictures for lecture tour
purposes.
Articles, press, radio, ex-
hibits, signs and posters on
conservation and fire pre-
vention.

School Work—
Co-operation with educa-
tional authorities on text
books, teachers' aids; poster,
radio and essay contests as
required by them.

Administration of—
Provincial Forest Stations.
Forest Tree Seed Supply:
Seed collection, extraction,
germination and storage.
Forest Tree Nurseries.
Experimental and Demon-
stration Forest Plantations.
Forest Tree Distribution.

Extension Work Through Zone
Foresters—
Municipal reforestation.
Inspection of private wood-
lands and plantations.
Rural school plantations.
Roadside windbreak plant-
ing.
Lectures on reforestation to
schools, county councils,
service clubs, etc.

Correspondence—
General Inquiries.
Departmental Routine
Publications—
Editing, writing, rewrites,
printing, distribution.

Public Affairs—
Principally in forest fire pre-
vention and Fish and Wild-
life Conservation.
Lecture tours in schools,
logging camps, outfitters'
camps, fish and game asso-
ciations, on conservation.
Photographs, slides, motion
pictures for lecture tour
purposes.
Articles, press, radio, ex-
hibits, signs and posters on
conservation and fire pre-
vention.

Preparation of—
Legislation, regulations,
timber agreements and vest-
ing orders.
Recommendations to Legis-
lative Council.
Special patents, land trans-
fers, deeds, leases; and
various agreements and
other miscellaneous docu-
ments of a legal nature.

Research in—
Forest Management: Re-
generation, Cutting Prac-
tices, Growth Studies, Vol-
ume Tables, Yield, Drains.
Forest Protection: Fire,
Insects, Disease, Smelter
Fumes investigation.
Fish and Wildlife: Inventory
Management, Genetics,
Stream Pollution, South Bay
Experiment.
Soil Surveys: Land Use
Surveys, Chemical, Physical
and Biological Analysis of
Forest Soils.
Forest Economics.
Mechanical-Electrical De-
velopments: Pumps, Hose,
Nozzles, Communications
Equipment, Reforestation
Equipment, Woods Utiliza-
tion Equipment.

Co-operation with—
University of Toronto, Na-
tional Research Council,
Science Service, Defence
Research, Ontario Research
Foundation, etc.

Operation of—
Southern Research Station.

Preparation of—
Photostatic copies of maps
and survey records and
other data to Government
Departments and the public.

Preparation of—
Photostatic copies of maps
and survey records and
other data to Government
Departments and the public.

Ground Section Administration
of—
Water Powers and stream
control.
Selection of official Geo-
graphic names.
Matters relevant to Provin-
cial Boundaries.
Fish and Wildlife: Inventory
Management, Genetics,
Stream Pollution, South Bay
Experiment.
Soil Surveys: Land Use
Surveys, Chemical, Physical
and Biological Analysis of
Forest Soils.
Forest Economics.
Mechanical-Electrical De-
velopments: Pumps, Hose,
Nozzles, Communications
Equipment, Reforestation
Equipment, Woods Utiliza-
tion Equipment.

Examination and Checking of—
Plans, descriptions and re-
ports of all types of surveys
of Crown Lands, Dams and
other structures as required
by the Lakes and Rivers
Improvement Act.
Preparation of—
Maps issued by the Depart-
ment.
Plans of Crown Land Sur-
veys.
Description of areas for
Government Departments.
Water Power Leases.
Licences for transmission,
telephone and railway rights-
of-way, flood areas and
dam sites.

Publication and
Distribution of—
Provincial, Township and
Topographical Maps.
Custodian and Recorder of—
Original survey notes and
plans, selected Geographic
names.

Supplies of—
Photostatic copies of maps
and survey records and
other data to Government
Departments and the public.

Air Survey Section—
Photography required for
Forestry, Highway and
Power purposes.
Processing films and prepa-
ration of types of maps re-
quired.
Supplying prints of areas
photographed to various
Departments and the public.

Timber Sale and Licences—
Application, Sales, Tenders.
Licences and renewals.
Transfers, additions, exten-
sions, abandonments.
Statistics, Map records.
Timber Returns—
Preparation timber dues ac-
counts.
Statistics, records of cut.

Pulpwood Exports—
Analysis of contracts.
Records of wood exported.
Mills Licensing—
Saw mill, pulp and paper
and other mill licences.
Records of mill production.

Scaling—
Courses and examinations.
Registration of scales.
Surveys and Inventories—
Organization and super-
vision.
Preparation of maps.
Maintenance of inventory.

Management Plans—
Master and annual plans
required under agreements.

Supervision of Woods
Operations—
Inspection and supervision.
Logging methods—technique.
Costs, compilation—analysis.
Integrated operations.
Liaison between government
and industry.

Total.....	126,397,240 acres

PERSONNEL MANAGEMENT

Selection and Placement:

Applications for employment with the Department come to us, for the most part, through the Office of the Civil Service Commission. A considerable number, however, are received direct. All persons making application at Head Office are interviewed by the Personnel Officer or his representative and a report on each applicant is made summarizing all essential details concerning the applicant's qualifications, experience and personal history and, as well, the interviewer records his impression of the applicant and makes his recommendation to the Chief of this Division.

The testing and rating of applicants for stenographic, typing and clerical positions by the Office of the Civil Service Commission has been of great assistance to us in recruiting competent persons in these classes.

The Department, has, wherever possible, placed ex-service personnel as positions or replacements became necessary. Of those appointed to the staff during the fiscal year, 70.5% were ex-service personnel. A statement appears which indicates the relative number of male and female employees.

Twenty Fish and Wildlife Specialists were appointed to give immediate, close supervision to enforcement matters in the various administrative districts under the respective District Foresters. The fish hatchery staffs became part of the District organizations.

On November 28, 1946, the Honourable H. R. Scott succeeded the Honourable W. G. Thompson as Minister of Lands and Forests.

On April 1, 1946, J. M. Taylor was appointed District Forester at Gogama. On the same date F. J. Dawson was appointed District Forester at Chapleau.

On June 3, 1946, Dr. W. J. K. Harkness was appointed Chief, Division of Fish and Wildlife.

On July 15, 1946, F. E. Sider, after his release from the Armed Services, was appointed District Forester at North Bay.

On August 22, 1946,

W. E. Steele was appointed District Forester of Rideau District.

A. Crealock was appointed District Forester of Quinte District.

A. B. Wheatley was appointed District Forester of Trent District.

I. C. Marritt was appointed District Forester of Lake Huron District.

F. S. Newman was appointed District Forester of Lake Erie District.

On September 28, 1946, J. F. L. Simmons was appointed District Forester of Lake Simcoe District.

On November 1, 1946, W. D. Cram was appointed Regional Forester of the South Eastern Region.

As of November 1, 1946, T. E. Mackey, formerly Regional Forester, North Bay, was appointed Chief, Division of Forest Protection.

As of March 1, 1947, W. D. Cram became Chief, Division of Land and Recreational Areas in addition to his duties as Regional Forester.

The following members of Staff were superannuated during the fiscal year:

<i>Name</i>	<i>Division or District</i>	<i>Date</i>
Barran, J. G.	Fish and Wildlife	April 22, 1946
Taylor, D. J.	Fish and Wildlife	May 16, 1946

CHART OF AGE CLASSES

DEATHS

The following are regretfully reported:

- J. St. Louis, Forest Ranger at Kapuskasing, on July 8th, 1946.
 C. E. Binkley, Game Overseer at North Bay, on November 6th, 1946.
 H. W. Crosbie, Chief, Division of Land and Recreational Areas, on
 November 2nd, 1946.

Investigations:

Constant liaison work has been conducted and essential investigations made from time to time throughout the service as required, through which the Head Office Relations with the field and vice versa have been facilitated.

Accident, Health and Safety Measures:

Medical and X-ray examinations have been continued. As a result, a large number of the staff have been done, and in this connection, it may be observed that it is now essential for employees recommended for promotion to the Permanent Staff to be categorized by the Health Clinic, or under their supervision. Health and Accident Prevention literature has been circulated and arrangements are being made for this to be followed by motion picture propaganda.

Attendance Records:

These are compiled monthly and are necessarily maintained with considerable care due to the fact that sick leave accumulations of employees with over five years service are worth half pay on their separation from the service.

Staff Suggestion Plan:

The interest of both employee and official in this plan has been maintained and on January 13, 1947, thirteen prizes for suggestions were awarded by the Committee as follows:

<i>Name</i>	<i>Suggestion</i>
R. H. Keenan, Sudbury.....	Display Cards in Railway Stations.
George E. Knight, Parry Sound.....	Statement of Fire-Fighting Expenses.
P. H. Foley, Kenora.....	Battery Tester Holder.
J. B. Thompson, Toronto.....	Publicity Parke Township.
Quimby F. Hess, Kapuskasing.....	Use of Fire Hazard Indicators.
Miss V. Molesworth, Toronto.....	Manual of Timber and Pulpwood Agreement Clauses.
J. A. Wynd, Armstrong.....	Pulpwood Rule.
W. H. Porch, Algonquin Park.....	Birds of Algonquin Park.
B. R. Somers, Sudbury.....	Chalk Holder.
Sydney Yavner, Toronto.....	Defect Calculator for Scaling.
H. E. Kedey, Sudbury.....	Paint Record Form.
Walter C. Davidson, Air Service, Sault Ste. Marie.....	Valve Depressor Tool.
Fernand De Sourdy, Port Arthur.....	Fine Spray Water Nozzle.

STAFF MEETINGS

Regional Meeting:

Regional Conferences including all the senior administrative officers of each region respectively, were held as follows:—

Western Region.....	Kenora.....	Oct. 7-8
Thunder Bay.....	Port Arthur.....	Oct. 10-11
Southern.....	Ranger School.....	Oct. 31—Nov. 1

District Foresters' Meetings:

The annual District Foresters' Conference was held in Toronto, January 20th to January 25th, 1947. It was attended by Field and Head Office officials, and with an organized time table and classified agenda, the proceedings resulted in a most beneficial conference.

Supplementary Conference:

A supplementary conference was held from February 17th to February 21st, 1947, attended by field foresters other than District Foresters. This conference provided an opportunity for Assistant Foresters and other senior officials to discuss current and other problems in open forum, for which suitable provision could not be made on the agenda of the Regular Conference. Definite benefits were immediately apparent, and because of this and the reactions of those who attended, it is proposed to continue the practice in an endeavour to bring about closer relations between the Field and Head Office and facilitate the efficient discharge of the responsibilities of all concerned.

TRAINING

The following are the details of First Aid Training, Job Instruction Training and the Head Office Staff Courses for the fiscal year. The favourable reaction of the staff and their hearty interest in the instruction as given, to say nothing of improved performance, is reflected in the ratings obtained by those instructed under the various headings.

The number of employees that completed First Aid Training successfully, as provided by the St. John's Ambulance Association, was 80.

The number of employees that completed the Job Instruction Training Course was 72.

The number of employees that completed the Head Office Staff Course was nine.

Ontario Forest Ranger School:

All of the buildings have not yet been completed, but the results obtained so far are most gratifying and it is hoped that the building programme will have been finished towards the end of 1947. The second term began October 1st, 1946, and concluded October 31st, 1946.

The following members of the staff attended from the various districts:

<i>Algonquin</i>	<i>Gogama</i>	<i>Port Arthur</i>
M. Getz	E. Barnes	W. J. Gibson
F. P. McIntyre	L. Morin	T. J. Buerard
J. Orme		W. H. Jarvis
J. Tait	<i>Kapuskasing</i>	C. W. McDonald
	E. A. Boice	
<i>Chapleau</i>	H. E. Hutchinson	<i>Quinte</i>
E. Collard	J. M. McDougall	K. Legris
G. T. Godemair		
	<i>Kenora</i>	<i>Sault Ste. Marie</i>
<i>Cochrane</i>	P. Borup	J. Bennett
S. E. McWhirter	J. A. Murphy	C. MacDonald
O. K. Welsh	J. MacKay	H. MacLeod
P. M. Dolan	F. Nicoll	C. Tregonning
<i>Fort Frances</i>	<i>North Bay</i>	<i>Sioux Lookout</i>
D. C. Baldwin	D. Burns	J. E. Anderson
R. H. Pattison	R. Laurin	P. Maskerine
S. V. Ryan		J. B. Rorke
	<i>Parry Sound</i>	
<i>Geraldton</i>	S. Booker	<i>Sudbury</i>
S. Maki	H. W. LaBrash	W. Wetow

During the period December 2nd to December 19th, 1946, inclusive, a Fish and Wildlife course was held at the Ranger School. It was attended by the Specialists and Enforcement Officers from the various districts, with obvious benefits.

Scaler's Course:

Under the direction of the Division of Timber Management, five courses were given at Minden, Thessalon, Fort William and Swastika respectively. Details of the results of examinations which followed these courses are reported by the Division of Timber Management on page 156.

Workmen's Compensation:

The provisions of the Act are available to the staff of the Department, many of whom are from time to time engaged in hazardous work—benefits in pay, medical aid and pensions.

For the past fiscal year the cost to the Department was \$22,051.73. The administrative charge of the Board was \$754.50. Last year these figures were \$12,458.04 and \$334.50 respectively.

Over the period back to 1938, these costs have varied from a minimum of \$12,850.33 in 1944 to \$17,129.85 in 1939.

The variations seem to be compatible with the intensity of the fire hazard, as the number of accidents and the incidence of these rise in the dry months and decline in the fall.

Every effort is made to eliminate dangerous or careless practice and so reduce cost, man day losses and job delay.

Chief Forest Rangers and their Divisions as of March 31, 1947.

ROYAL COMMISSION ON FORESTRY

Under Order-in-Council, dated April 16, 1946 and pursuant to the Public Inquiries Act, R.S.O. 1937, chapter 19, Major General Howard Kennedy, C.B.E., M.C., B.Sc. (McGill), was appointed a Commissioner to investigate, enquire into and report upon the forest resources of Ontario and their conservation, management, development and beneficial utilization for all purposes, and was given power to summon any person and require him to give evidence on

oath, and to produce such documents and things "as the commissioner deems requisite for the full investigation of the matter into which he is appointed to examine, by subpoena signed by the commissioner."

Pursuant thereto, the Commissioner conducted public hearings at various points throughout the Province in subsequent months, and submissions to the Commissioner of relevant material from the public were invited. In due course hearings were conducted at the Parliament Buildings, Queen's Park, Toronto, at which briefs were presented at the request of the Commissioner. Briefs presented by the various divisions of our Department, included charts, graphs and explanatory information.

OFFICE MANAGEMENT

Outside Storage Space

It became evident some time ago that the space in the Outside Storage Building, erected at the Southern Experimental Station, would not be adequate to house the increased volume of records brought about by the amalgamation of the Department of Game and Fisheries with the Department of Lands and Forests.

Consequently, it was decided to add two new wings of brick and concrete, similar to the original building. Each wing is thirty feet long by twenty feet wide, one at each end of the main structure, and running at right angles to it. The southern wing was constructed with a basement to accommodate a heating and air conditioning plant with fuel bins. This installation has been completed.

Due to the extreme shortage of sheet steel, it was found to be impossible to obtain our total requirements of steel transfer cases in which to house the records sent for storage. However, about one-third of our requirements were obtained, and these cases are now installed and will meet immediate needs.

Office Space

Due to a great expansion of staff, space adjustments became increasingly necessary, in order to make the utmost use of the offices available. Despite planning for effective utilization of space many offices are badly over-crowded.

Permanent Records.

In addition to the transfer of older records to the Outside Storage Building at Maple, the Records Office Staff had the problem of taking over the files of the Department of Game and Fisheries, and including in the Permanent Records-Filing System, those files which should properly be maintained there. At present there are over 140,000 Permanent files and the average mail in connection with these is 200 letters daily, in addition to other mail on various Divisional matters.

Supply Records

A visible index card system is maintained to record the receipts, issues and stock balance of all equipment and supplies handled by this sub-section. This entails a clerk's full time work. The system reflects the quantities and location of all equipment.

Equipment Records

(a) This comprises a perpetual inventory of non-expendable equipment held by Head Office and all Districts, Forest Stations, Regional Caches, etc., in the Department.

(b) With the incorporation of the Department of Game and Fisheries with this Department, and the organization of five new Districts, the amount of work involved has become much greater. It is necessary to pick up all items of non-expendable equipment from invoices passed for payment, to record them in their proper classification and location, and to be able to render a completely priced statement at any time this might be required. The work of absorbing into our system the Game and Fisheries forms and licences was difficult and protracted, but in due course accomplished.

(c) The expansion of Department Staff, together with the inclusion of the Department of Game and Fisheries as a new Division, increased tremendously the volume of equipment and supplies purchased and distributed. This increase was accentuated by the concentration of all Main Office purchasing under the Division of Operation and Personnel, as of December 1st, 1946.

The volume of requisitions from Field and Main Offices, during the year, was more than double the number processed in the previous year.

(d) Distribution of Technical Circulars and Publicity Material:—

A vastly increased quantity of informative literature, in the form of Technical Circulars and Publicity material was distributed during the year.

Distribution and Stock Storage

These functions are detailed jointly rather than individually because they are so closely allied. All the equipment and supplies mentioned above received in our stockroom are closely checked against King's Printer requisitions, Public Works requisitions or purchase orders, as the case may be. Goods which are required for the immediate filling of an outstanding order are checked against that order and prepared for shipment, in the case of Field Offices. Requirements for Head Office needs are checked against the Divisional requisition and delivery is made to the office of origin where signature is obtained.

Goods for long term supply, such as printed forms (of which nearly 1,000 different types are in actual use) maps, advertising and publicity material, bulk stationery and office supplies and certain smaller items of equipment, must be carefully placed in stock in orderly fashion to be readily available when required.

In addition to the foregoing, our duplicating machines are located in the stockroom and all duplicating work for the Department is carried out there by means of mimeograph or multilith processes. This work includes the production of a large percentage of the Departmental forms now in use, numerous technical and other reports, form letters, and a large volume of Technical, Policy, Divisional and Information Circulars. A record of cost on all duplicating work is maintained.

The foregoing items must be assembled, stitched, folded where necessary, placed in envelopes and dispatched to Parliament Buildings' Post Office. In addition, a heavy flow of educational literature is dispatched in a similar manner.

Some idea of the volume of work carried on in this stockroom may be given from the following figures covering activities of the past twelve months:

- 140 tons of goods handled annually.
- 8,500 booklets dispatched quarterly.
- 2,000 pamphlets dispatched semi-monthly.
- 144,000 circulars produced, assembled and dispatched annually.
- 250,000 mimeograph impressions made annually.
- 1,768,000 multilith impressions made annually.
- 21,280 orders, received, filled, checked and shipped.

(This figure of 21,280 is made up of 6,280 orders of stationery and supplies, and 15,000 shipments containing 469,700 Fish and Game Licences).

In addition to the recording of all incoming requisitions and outgoing shipments, a permanent record is maintained of all serially numbered forms such as Cutting Permits, Land Permits, Cash Receipt Books, for casual payroll and extra Fire Fighting staff, Main Office receipts, and Rental Due Notices.

1.—*Servicing—Messenger Service*

A messenger service is maintained and these duties are carried out by junior members of the Record's Staff.

2.—*Space Adjustments*

Many adjustments must be made in order to accommodate a greatly increased staff in already crowded office space. The situation has become critical and even with the removal of certain sections of the Department to other quarters outside the Parliament Buildings, space is still at a premium. This is considered most important in order that the administration of the Department may be facilitated properly.

3.—*Relations with Building Superintendent, Department of Public Works and Special Arrangements.*

It is difficult to detail the duties carried out under this heading, but they nevertheless consume a considerable proportion of the time of the officer in charge of the section and certain members of the staff. This includes arrangements for moving of office furniture, accommodation for special conferences, etc., major moves of section as mentioned in (2) above, and the handling of specially large incoming or outgoing freight shipments.

[INFORMATION AND EDUCATION]

Introduction

The eagerness with which the people of Ontario have sought information concerning their natural resources during the past year has been remarkable indeed.

The merger of the Departments of Lands and Forests and Game and Fisheries on June 2nd, 1946, increased considerably the scope and volume of work of this section. It is felt that good management of our fish and wildlife resources depends largely on the understanding and consequent co-operation of anglers and hunters. Enforcement of the fish and game laws and regulations is in itself economically impossible without such active co-operation. Therefore, the increased volume of appeals for observance of the fish and game laws during the year was considered to be justified.

Staff

(1) The clerical-stenographic staff was increased from three to four during the year.

(2) The man appointed in charge of appeals in February, 1946, was transferred to the field staff in November, 1946, and was not replaced at head office.

(3) In May, 1946, a former member of the Department of Game and Fisheries took over the duty of answering general inquiries regarding fish and wildlife.

(4) In the early part of the year, two field lecturers were added to the staff.

and one more at a late date, bringing the full-time field staff up to four. Two other lecturers operated during the summer season.

(5) One full-time photographer and a photo-processor were engaged in the fall of 1946.

PUBLICATIONS

Twenty-three new booklets were published during the year, and ten others were reprinted, with revisions. Four issues of the Department's magazine "SYLVA", started in the previous year, were published.

The demand for publications increased, in many cases exceeding the supply. A great volume of letter writing by administrative officers was eliminated through the use of these publications.

LECTURE TOURS

The lecture tours were highly successful in the past year. It is considered that the showing of motion pictures is one of the best means of influencing the public to become more careful in the use of fire in the woods, and in observance of the fish and game laws.

The feature pictures used were "To-morrow's Timber" and "Portage", supported by a number of short subjects. Towards the close of the year a fish and wildlife picture, entitled "Realm of the Wild" was purchased from a U.S. source. There is a great need for the production of conservation pictures in Ontario locale.

One picture, "Timagami Ranger" was produced under Department direction during the year, and will be available for showing at the start of the next fiscal year.

Articles

Forty-one press releases were issued during the year. In addition, data was supplied to reporters and editors for numerous articles. The 24,000 column inches of space given by Ontario newspapers to Department activities and interests represented a 20 per cent. increase over the previous year.

Fifty articles written by the staff of the Department, were published in magazines, in addition to over 1,000 news items. Several articles by feature writers were published in national magazines, based on material supplied by the Department.

LECTURE TOUR RECORD
APRIL 1, 1946 TO MARCH 31, 1947

Region	District	SCHOOL MEETINGS		BOYS' & GIRLS' CAMPS		(1) PUBLIC MEETINGS		TOTALS 1946-7		TOTALS 1945-6

						13	1,321	13	1,321	70	3,036
								781	93,423	734	83,474

(1)—"Public Meetings" has reference to meetings at service clubs, various types of associations, logging camps, and forest communities.

(2) and (3)—The Gogama and Chapleau districts formerly formed parts of the Sudbury district.

(4)—The 65 meetings with an attendance of 5,000 were not included in last year's report. These meetings were put on by members of the head office staff.

POSTERS

The following cards were issued during the year, for posting in Northern Ontario forests:

Campsite
Do Not Set Out Fires
Forest Fire Law
Forest Fires are Caused By
A Good Sportsman Stops to Smoke
He Is Burning Your Forest
Look Before You Leave
Timber Seizure Notice
Settlers and Others Burning Brush
Stop—Have You Got Your Travel Permit
Stop—Did You Put Out Your Campfire
Trespassing is Forbidden
Your Campfire

Radio

Seven 10-minute interview broadcasts were given over a Toronto station, and discs distributed to 16 Ontario stations for recording. All of these were informative.

Radio stations in Ontario rendered valuable assistance to District Foresters in broadcasting spot messages in connection with forest fires.

Advertising

A total of 98 advertisements were placed with Ontario daily and weekly newspapers, calling for tenders for the sale of Crown Timber. Sixty additional advertisements were placed in connection with the Railway Fire Charge Act, Culler's Examinations, sale and purchase of equipment, etc. An announcement of the opening of the hunting seasons for game birds was published in 350 Ontario daily and weekly newspapers.

Conservation appeals in the form of display-type advertisements were published in four Ontario dailies in connection with special events of associations.

Sixty-one conservation appeal display advertisements were published in magazines. Fourteen of these were in timber journals, and seven in special timber issues of business and financial periodicals. Of the balance, twenty-five were placed in fishing and hunting and outdoor magazines or sports programmes, three in farm journals, and twelve in war veterans, police, labour and like journals.

School Work

A forest fire prevention poster contest was conducted, in co-operation with the Department of Education, in the 34 School Inspectorates of northern Ontario. After preliminary selections by the schools and local committees, 285 posters were submitted to the final judging committee. The excellence of the posters, the instruction received by the pupils, and the fire prevention publicity accorded by the press and magazines fully justified the contest.

In addition to the lecture work by the staff in the schools and the general type of literature provided to teachers, it is felt that a limited variety of publications, specially prepared as teachers' aids, would be of great assistance in developing a greater natural resource consciousness in our oncoming generations.

EXHIBITS

Many of the larger fairs, exhibitions, and sportsmen's shows which had been inoperative since early in the war, reopened in the 1946-47 season. A record of the exhibits placed by the Department during the year follows:

EXHIBITIONS	SPONSOR	PLACE	DATE	AREA	TYPE
International Plowing Match	Ontario Plowman's Assoc.	Goderich	Oct. 14-18, 1946	75' x 25'	Reforestation, Fire Prevention, Fish and Wildlife.
Royal Winter Fair	Royal Agricultural Winter Fair Association.	Toronto	Nov. 12-20, 1946	83' x 42'	Reforestation, Fire Prevention, Fish and Wildlife.
Barrie Winter Fair	Barrie Winter Fair Association	Barrie	Dec. 5-6, 1946	32' x 12'	Reforestation.
Northern Ontario Outfitters' Assoc. Annual Meeting and Sports-Carnival	Northern Ontario Outfitters' Assoc.	Sudbury	Feb. 2-4, 1947	35' x 40'	Fish and Wildlife, Recreation Land Sales, Fire Prevention.
Hamilton Sportsmen's Show	Hamilton Angling & Hunting Assoc.	Hamilton	Feb. 28, 1947	30' x 10'	Fish and Wildlife, Fire Prevention.
Western Sportsmen's Fair	Thames Boat Club	London	Mar. 17-22, 1947	72' x 20'	Fish and Wildlife, Reforestation, Fire Prevention.
Brantford Sportsmen's Show	Brant Rod & Gun Club	Brantford	Mar. 28-29, 1947	40' x 15'	Fish and Wildlife, Fire Prevention.

In addition to the above, a number of small exhibits were placed by the reforestation field staff at County fairs.

With the re-opening in the coming year of the Canadian National Exhibition at Toronto and the Central Canada Exhibition at Ottawa, together with the prospect of very large scale sportsmen's shows in these same cities, the staff will be heavily taxed in the planning, construction and servicing of exhibits.

Correspondence

The volume of correspondence in response to letters of inquiry for information increased considerably over past years, due particularly to the inclusion of general inquiries concerning fish and wildlife, amounting to approximately 4,200 letters with reference to this subject alone.

Miscellaneous Activities

In addition to other duties in connection with preparation, statistical compilation, research, distribution, and business routine, the Information and Education staff conducted tours of inspection with visitors, gave public relations training to other staff members, and attended meetings and conventions.

NORTHUMBERLAND FOREST AN AREA REFORESTED BY THE DEPARTMENT OF LANDS AND FORESTS.

DIVISION OF REFORESTATION

Distribution of Trees

The distribution of trees for the year under review reached a figure of 13,175,000, an increase of 2,000,000 over that of the previous season. This increase was largely due to the increased demand by private landowners.

On a cross-section study made of the results of this distribution, it was found that on private planting a very large percentage of loss had occurred. This was especially true of those trying to develop hardwood plantations on heavy clay soil. The losses sustained are attributed to a large number of causes, the outstanding being improper or careless planting, grass and weed competition, along with loss from rodents such as mice and rabbits, and a large percentage of loss from grazing.

It should be emphasized that the successful distribution of forest trees, and their proper development, is dependent on correct plans being made, through experienced forest officers or trained men in the field.

Distribution to Schools

Interest has continued in school planting through the competitions organized by the Ontario Horticultural Association. Trees sent out under these Competitions numbered 560,000.

Seed Collection and Extraction

This past season's seed crop was disappointing, as our important conifers, such as Red Pine and White Spruce, produced a very poor crop. There was a good crop of White Pine seed. This condition was brought about owing to the abnormal temperatures of early Spring, when hot weather and following freezing occurred during the flowering stage.

Provincial Stations

A new Forest Nursery and Provincial Forest Station has been established in North Western Ontario, near Port Arthur and Fort William. This Station, containing 400 acres, is located in the Township of Paipoonge. It is expected that this Nursery will provide planting stock for reforestation projects in North Western Ontario. It was found unsatisfactory to ship material from the older Stations in Southern Ontario.

TABLE No. 1
SUMMARY OF TREES DISTRIBUTED
(July 1, 1945 to June 30, 1946)

DIVISION OF RESEARCH

The Research Division completed a year of expansion during 1946 despite the fact that competent research personnel are difficult to obtain at any time, and particularly so under existing conditions of active competition from industry and educational institutions.

During the year three additional staff members were given full time employment; a botanical geneticist, a mammalogist, specializing in wildlife; and a fisheries biologist. It is hoped to be able to add further to the staff when competent, thoroughly trained people are available.

Because of the nature of research work, and the Division's stage of development, it is felt that only the highest grade of staff available should be considered for permanent appointments.

The urgency of many of the investigations looking to the expansion and continuity of forest operations, remains unchanged, and in many cases has been accentuated by the cumulative results of war wastage and the growing need for more efficient utilization and protection.

The Division's whole field of work has been broadened by the amalgamation of the Game and Fisheries and Lands and Forests Departments.

The following is a summary of the work carried out during the fiscal year 1946-47. Separate special reports have been made on all completed phases of the work.

The following is a summary of people employed by this Division during the year:

<i>Permanent</i>	4 Foresters 1 Mechanical Engineer 1 Soils Specialist
	—
	6
<i>Continuous Temporary</i>	1 Forester Geneticist 1 Chemist 3 Draughtsmen 3 Mechanics 1 Building Superintendent
	—
	9
<i>Casual (Students)</i>	30 Forestry undergraduates 18 Biology undergraduates 6 Other Course undergraduates 9 High School Students
	—
	63

The program covered during the year is outlined under the following headings:

- I. *Biological Studies*
 - Silviculture
 - Soils
 - Smelter Fumes
 - Forest Genetics

ANALYZING THE SULPHUR-DIOXIDE CONTENT OF THE AIR FROM AN AIRCRAFT.

Artificial Reforestation by Seeding
Game and Fisheries
Forest Pest Control

II. *Economic and Management Studies.*

III. *Mechanical and Electrical Investigations.*

I. BIOLOGICAL

Silviculture:

The general object of these studies is to obtain information for sustained forest management. The work of the Research Division in the period reported on was undertaken to determine the adequacy of stocking of desirable species following cutting and fire and to devise methods to correct deficiencies. Experiments are or will be set up to check the results from recommended procedures in actual practice.

Surveys under this heading were carried on in the following areas in 1946:

- (1) Northern Clay Belt in the Kapuskasing District. This survey was under the direction of Professor R. C. Hosie and was originally organized in 1945 as a cooperative effort with the University and the Spruce Falls Power & Paper Co. The 1946 survey was intended to complete the work of 1945. A report has been published on both seasons' work.
- (2) In the Goulais River area north of Sault Ste. Marie. This work was undertaken in 1945 to study the effects of logging on a mixed stand and was undertaken as a cooperative effort with the Dominion Government. The main effort during the past summer was to relocate sample plots set out during the late 20's. No report has as yet been issued by the Dominion Forest Service who control this project.
- (3) In the Port Arthur and Kenora Districts. These surveys were undertaken to study regeneration following logging and fire. The species studied were mainly spruce, jack pine and poplar. The work was organized by the Research Division and was under the general direction of Mr. Peter Addison and Mr. Wilson Cram, Regional Foresters at Port Arthur and Kenora respectively. The field work was conducted by A. P. Leslie and H. C. Larsson, assisted by 18 students. Some 150,000 acres were examined during the season.

Soils:

The main object of this work is the separation of agricultural and forest soils and the classification of forest soils to ensure their most productive use. It was carried on under the direction of G. A. Hills. Field work was mainly in the Cochrane District and covered approximately 50,000 acres. A soil analysis laboratory was established at the Southern Research Station near Maple, Ontario. The results of these soil surveys can be used as a guide to land settlements and will also define the area of the Province which should be used for the growing of forest products.

Smelter Fumes:

This study is a continuation of the work of 1944-45 to determine damage to the forest by fumes from smelters at Sudbury and Falconbridge. Field work consisted of aerial sampling in the smelter smoke and on the ground using an

automatic recorder in the plane. Automatic ground recorders have now been set up at Bear Island, Emerald Lake, Skead, Capreol, Crystal Falls, Burwash and Lake Penage. The assistance of Mr. A. W. McCallum, Pathologist of the Dominion Department of Agriculture, and Dr. George Duff, of the University of Toronto, was obtained in studying pathological effects on trees and the deterioration of killed material. Meteorological effects were studied by the Dominion Meteorological Service. A secondary laboratory site was selected near Thessalon for controlled experiments in fumigation to be made in 1947.

Forest Genetics:

The services of a competent geneticist, Dr. C. C. Heimburger, were obtained in August of 1946. Dr. Heimburger will proceed with his work on the selection of a blister rust resistant strain of white pine and an aspen which will combine good growth, disease resistance and good pulping qualities. He has also started the establishment of an arboretum at Maple of all declimatized trees.

Artificial Reforestation by Seeding:

This project dealing mainly with the use of coated seed on burned areas commenced in the fall of 1946 and several burned areas were sown experimentally by hand and from an airplane. Seeds were coated at the Maple station using a combination of insecticides, rodent repellents and fertilizers.

A study of the seeding habits of pines, particularly red pine, was started this year under the direction of Dr. George Duff, of the University of Toronto, assisted by two undergraduates. This work is necessary because little is known of the seeding habits of trees or why their seed production is sporadic. It is thought that as a result of this work it may be possible finally to produce regular cone crops from plantation pine at an economic cost. This will reduce the uncertainty now attending naturally grown supplies of seed.

Game and Fish:

The main object of these studies is to increase the game and fish resources of the Province. Fisheries surveys were carried out during this season under the direction of Dr. W. J. K. Harkness and Dr. F. E. J. Fry in Algonquin, Sibley and Quetico Parks and in Lake Eric and Lake Ontario. The principal studies were directed towards the effect of coarse fish on game and commercial species and the improvement resulting from a balanced removal of all species or, in some cases, a heavy removal of coarse fish and restocking with desirable species.

Studies of habitat relationships such as water temperatures and food content in relation to fish numbers and health were continued at the Fish Laboratory near Whitney. Studies of planting Atlantic salmon were made in Duffin's Creek near Pickering, Ontario.

Wildlife studies were carried out under the direction of Dr. C. H. D. Clarke, assisted by 8 students, in Algonquin Park. A wilderness area of 30.5 sq. miles for the study of wildlife under natural conditions was established in Algonquin Park in 1944 and work was continued in this area. The principal study was directed towards obtaining a method of assessing animal populations that can be applied in forest and game management. The problem of animal diseases also received attention.

Forest Pest Control:

The object of this project was a thorough investigation of the possibility of controlling major forest insect infestations by the use of insecticides applied from aircraft. Following the program of 1945 when 100 square miles were sprayed, an additional 40 square miles were sprayed in the Thunder Bay district. This work organized by the Department received important contributions from the R.C.A.F. and the Science Service of the Dominion Department of Agriculture. The efficiency of the experiment was greatly increased over 1945, when five Canso planes under contract were used. In 1946 one Canso plane owned by the Department covered almost half the area sprayed in 1945. The total cost of the spraying operation amounted to \$3.23 per acre. Application of DDT ranged from 2 to 4 pounds per acre and a kill of budworm of over 90 per cent resulted from the 2 pound per acre application. A report has been issued.

II. ECONOMIC AND MANAGEMENT STUDIES

Some further work was carried out in connection with the study of stumpage as a basis for charges in timber disposal. All operators in Southern Ontario were canvassed as to willingness to cooperate in these studies, but no proper field work could be carried on because staff with the proper qualifications for this work are not yet available.

A study of the economics of cutting small pine was commenced in the southeastern part of Ontario by Mr. M. V. B. Ardenne, assisted by two students. This work would aid the Department and the operators in determining where profit ends and loss begins in the cutting of small timber. The result should make it easier to retain small timber for its full economic rotation.

III. MECHANICAL AND ELECTRICAL INVESTIGATIONS

The main mechanical building of the Research Station near Maple was completed and mechanical work was undertaken. Tests of various commercial forest fire pumping units were carried out as well as tests of fungicides for preventing decay of fire hose. A prototype cone extracting machine using infra red heat lamps was constructed. Some 40 jeeps and vehicles purchased by the Department were overhauled before being put into field use.

A superintendent's residence was completed, also a garage for storage of eight vehicles. A complete soils laboratory for physical and chemical analysis of soils was set up. A start was made on a fisheries research laboratory which will feature the unique "artificial lake", where any condition found in natural lakes may be recreated in the laboratory and thus aid in obtaining knowledge of fish that will facilitate artificial and natural stocking and fish culture of all kinds. A test well for water supply to this laboratory was drilled and an adequate supply of high quality water assured.

A LOW ALTITUDE VERTICAL AERIAL PHOTOGRAPH OF THE SOUTHERN EXPERIMENTAL STATION
AT MAPLE, ONTARIO.

DIVISION OF SURVEYS AND ENGINEERING

The further development of the natural resources increased the activities of the Department as a whole and this was reflected in the work undertaken by this Division. In so far as qualified personnel were available, efforts were made to cope with the backlog of field and office work that had accumulated as the result of personnel shortages during the past years.

In the Forest Inventory Project as undertaken by the Department over a five year plan, the Division of Surveys and Engineering is responsible for covering 18,000 square miles by vertical photography and the preparation of planimetric maps to a scale of four inches to one mile. An area of 5,054 square miles has been photographed during the past fiscal year. Ground control surveys were undertaken in the Districts of Cochrane and Thunder Bay to provide accurate and sufficient ground control points in areas previously unsurveyed.

The preservation of our survey records, representing land surveys carried out over the length and breadth of the Province over the past 150 years, is most important. The work of microfilming the field books was commenced this year and the films stored in fireproof containers.

The following aerial and ground surveys were undertaken during the fiscal year ending March 31st, 1947:

GROUND SURVEYS SECTION

Survey instructions were issued for the following surveys:—

Crown Surveys

1. Base line survey in the District of Cochrane, extending from Maund Township to the boundary between the Provinces of Ontario and Quebec. This survey required to provide ground control for aerial photography in connection with the forest inventory project.
2. Re-establishing an original survey corner on Gold Island, Township of Cody, District of Cochrane.
3. Survey of additional building lots at Longlac, in the Township of Daley, District of Thunder Bay.
4. Survey of additional building lots in the Townsite of Alexandra, Township of Shackleton, District of Cochrane.
5. Resurvey of part of the boundary between townships 83 and 84, District of Thunder Bay.
6. Survey to locate building encroachments on Crown Lands, below high water mark, in the Improvement District of Wasaga Beach, Township of Sunnidale.
7. Retracement Survey of the boundaries of the Township of Hearst. (Survey costs borne by the Department of Mines).
8. Retracement survey of the north, west and south boundaries of the Township of McElroy (Survey costs borne by the Department of Mines).
9. Control traverse of part of the Aguasabon River, District of Thunder Bay.
10. Retracement survey of part of the third concession from lots 1 to 12 inclusive, Township of Methuen, County of Peterborough.

11. Retracement survey of certain boundaries in the Townships of Rolph, Head, Maria, Clara, Cameron, Papineau and Mattawan. (Survey costs borne by The Hydro-Electric Power Commission of Ontario).
12. Retracement of boundary between concessions VII and VIII from lot 31 to the west boundary of the Township of Cornwall and the establishment of certain corners of Township lots.
13. Retracement survey to delimit the boundaries of lots 37, 38, 39 and 40, Con. II, N.R. Township of Watten, District of Rainy River.

Municipal Surveys

- No. 818—Jarvis Street, between King and Queen Streets, City of Toronto.
- No. 820—Parts of the line between concessions IX and X, Township of North Walsingham, County of Norfolk.
- No. 821—South boundary of the township of Lake, County of Hastings, across Concession 5 and the line between Concessions 1 and 2, Lots 1 to 32 inclusive.
- No. 822—Boundary line between the townships of Methuen and Belmont in the County of Peterborough, from the 5th concession line easterly to the boundary between the Townships of Marmora and Lake.

Private Surveys on Crown Lands

Under authority of Section 37 of the Public Lands Regulations, 388 summer resort locations were surveyed and the returns of survey filed in the Department. One hundred and thirty surveys of this number were surveyed under direct departmental instructions to the surveyor where the applicant paid in the sixty dollar survey fee as specified in Section 37 of the Public Lands Regulations.

Under provisions of the Mining Act, the survey returns of 840 mining claims were filed in the Department for examination and approval.

Townsite Subdivisions

The following subdivisions of land affected by the provisions of the Townsites Act were surveyed on privately-owned lands, and approved by Orders-in-Council. A cash consideration was accepted by the Crown in lieu of selecting one quarter of the number of lots as surveyed.

<i>Designation of Subdivision</i>	<i>Date of Order-in-Council</i>
1. Part of Mining Claim MR 6252, Township of Cairo in the Townsite of Matachewan, District of Timiskaming.....	April 9th, 1946.
2. Part of mining claim T.B. 4882, Township of Summers, Dillabough Townsite, District of Thunder Bay.....	Oct. 15th, 1946.
3. Part of Lot 7, Concession 5, Township of Merritt, District of Sudbury.....	Oct. 15th, 1946.
4. Part of mining claim MR 9947 and MR 10263, Township of Cairo, in the Townsite of Matachewan, District of Timiskaming.....	Oct. 15th, 1946.
5. Part of lot 1, Concession 3, Township of Mountjoy, District of Cochrane.....	Nov. 14th, 1946.

Map Publications

The following maps and booklets were revised and printed:—

Map 21c—District of Timiskaming and Parts of Sudbury and Nipissing. 5,000 copies of 1944 edition reprinted with some revisions to township names and district boundary colour scheme changed to full colours.

Map 23a—District of Thunder Bay, revised edition; 5,000 copies lithographed in full colours.

Map 21a—Southern Part of Province of Ontario. Reprint edition of 5,000 copies.

Booklet—"List of Townships" revised and reprinted. 1,000 copies.

List of—Maps and plans issued by the Division of Surveys and Engineering—revised and reprinted 5,000 copies.

A group of five maps was compiled, reproduced and lithographed relative to the book "Algonquin Story" published under the supervision of the Division of Operation and Personnel—10,000 copies of each of the following maps printed:

- (a) Topographic map of Huron and Ottawa Territory.
- (b) Area of Algonquin Provincial Park.
- (c) Exploration map of Huron and Ottawa Territory.
- (d) Map showing colonization roads in and around Algonquin Provincial Park.
- (e) Watershed map of Algonquin Provincial Park.

Distribution of Maps

This Division is the central point for map distribution covering all Provincial issues and also the National Topographic Series for Ontario, as published by the Department of Mines and Resources in Ottawa. These maps are for sale to the public and distributed without charge for official Departmental use and publicity purposes. The acquisition of Crown Lands for summer resort purposes has increased considerably over past years, which, together with additional tourist activity, has resulted in an increased demand for maps as compared to the number distributed during the previous fiscal year.

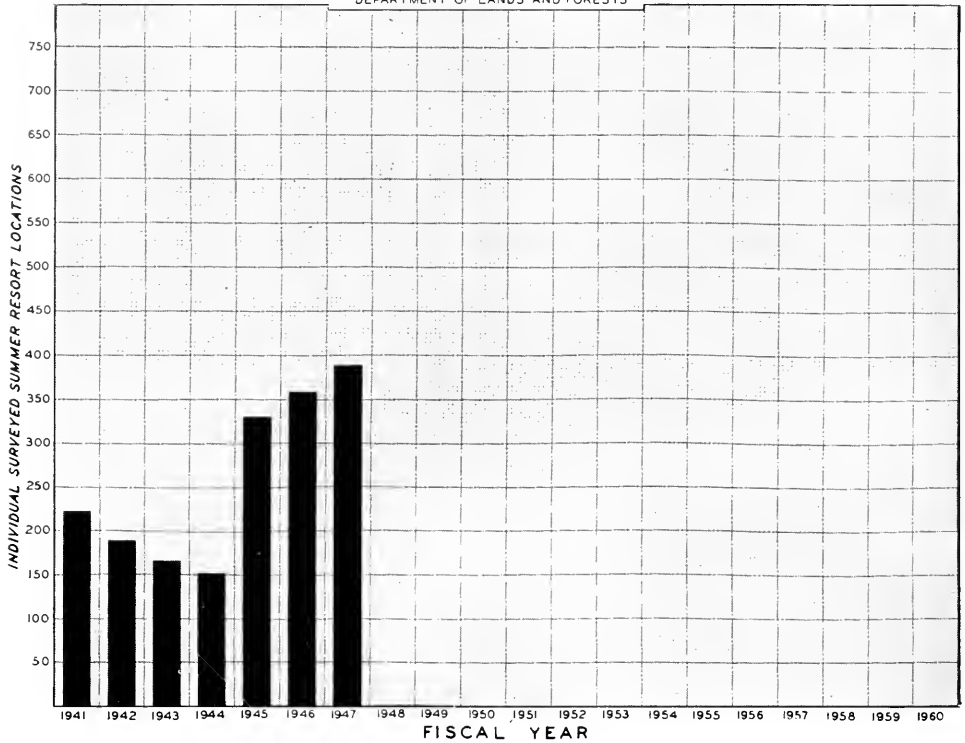

Distribution of Maps

National Topographic Series	10,535
---------------------------------------	--------

Provincial Maps

20A (Free Issue)	3650	
District Maps	7378	
Island Maps	600	
42A (Township)	1772	
33A (Electoral)	141	
Miscellaneous	3103	
Total	16,644	16,644
Grand Total		27,179

SURVEYED SUMMER RESORT LOCATIONS ON CROWN LAND EXAMINED BY THE
DIVISION OF SURVEYS AND ENGINEERING
DEPARTMENT OF LANDS AND FORESTS

Of the total number of maps distributed, approximately twenty per cent were distributed, without charge, for the official use of Provincial and Dominion Departments, Clergy, Red Cross and for educational and publicity purposes.

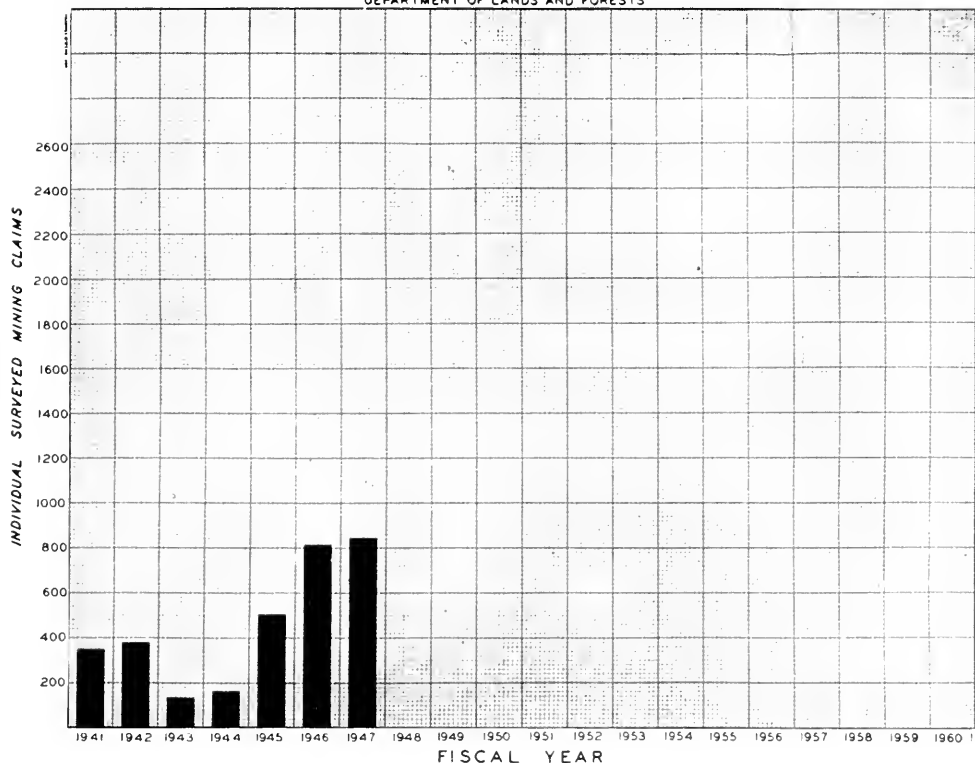

Cash receipts "over the counter" for maps, photostats and printing show an increase of approximately 30% over the previous year. The "over the counter" receipts represent 3,000 customers. Approximately an additional 5,000 over-the-counter enquiries were made by Departmental or Divisional personnel relative to maps and survey records.

5,000 letters of request for maps and copies of survey records were received and dealt with during the year. Revenue from this source shows an increase of 20% over the previous year.

Survey Records

This office has custody of all survey records of surveys made under instructions from this Department and other types of surveys affecting Crown lands. Copies are available to the public at the prescribed rates, and for official Departmental use. The returns of survey made each year comprising plans and field notes are registered, indexed and the field notes bound and filed. Numerous requests for copies or information pertaining to these survey records are received each year for Ground Survey purposes and as ground control for Aerial Photography and many other uses.

**SURVEYED MINING CLAIMS ON CROWN LAND EXAMINED BY THE
DIVISION OF SURVEYS AND ENGINEERING
DEPARTMENT OF LANDS AND FORESTS**

Number of Survey Records on File

Municipal Survey Plans (Approximately)	800
Municipal Survey Field Notes (Approximately)	800
Crown Land Survey Plans, mounted, filed flat, comprising original Townships, Townsites, Islands, Indian Reserves, and Miscellaneous	2,500
Rolled Plans- Same as above, and including Railways, Power Transmission Lines, Flooding Lakes and Island Traverses, Subdivisions, etc.	4,300
Filed Flat in Volumes- Partial Township Plans, Island Plans, Mining Location Plans	7,000
Crown Land Survey Field Note Books (Representing some 2800 surveys)	2,700
Miscellaneous Volumes- including Crown Land and Municipal Instruction Books, Letters Written, Letters Received and Letters Relating to Surveys, Field Note Volumes, Surveyors Letters, etc.	350

In order to ensure preservation of the survey records, many of which are over 100 years' old and fast deteriorating with age, plans are being formulated for the treatment of original maps by a chemical process and the services of a bookbinder were obtained with the work of repairing and recovering all field note books and other volumes commenced in the latter part of January, 1947. Under this plan, the microfilming of all of the original survey records was also commenced in the latter part of January. By the end of this fiscal year, 1881 field note books and 94 other volumes representing a total of 259,000 pages had been microfilmed. For the present, it is planned to continue to use the original records and have the microfilmed negatives available for reproduction purposes in the event of the original records becoming indistinguishable with age.

It is planned to re-index and catalogue all of these records as time permits. In this connection the only progress made during this fiscal year was on the re-indexing of the field note books and the separation of all municipal survey records from the Crown Land Surveys. Plans only were formulated on the card index system for the re-indexing and cataloguing.

Photostating

In November, 1946, the Photostat Section was transferred from the Aerial Survey Section to the Ground Surveys under the supervision of the Map Office, which is the central point for the ordering of all photostatic material for this Department. A notable item was the supplying of some 25,000 photostatic copies of pages of field notes for the aerial mapping portion of the Forest Resources Inventory Programme.

The photostat service is available to other Departments of the Government, insofar as the copying of their records is concerned, at the prescribed rates. This service extends also to Commissions of the Government and the public for copies of records held in this Department and work pertaining thereto.

It is estimated that it costs 15c to produce one square foot of photostat copy. Some 45,000 square feet of photostat paper was used during the fiscal year. The following is the approximate square footage of photostatic paper used for Departmental Divisions and District Offices, other than this Division, during the year:—

The balance or approximately 51% of the paper used was for the official work of this Division and for reproduction work for other Departments of the Government and the general public.

Blue and OCE Printing

The making of Blue and OCE prints is done through sources other than this Department. The orders placed through the Map Office represented some 116,000 square feet of paper for the whole Department, including the District Offices. Ground Surveys alone used approximately 57,000 square feet of paper, for office use and re-sale purposes.

Through public demand a stock of prints taken from Township plans, covering Parry Sound District are now available in this office. These plans are a compilation of the original survey with the Aerial Photography work as taken from the National Topographic Series maps.

AERIAL SURVEYS SECTION

This Section covered 10,708 square miles with vertical photography during the above Fiscal Year.

Of this total, 9,772 square miles were for our own and other Departments of the Provincial Government, (including H.E.P.C.) while the remaining 936 square miles were for outside concerns.

Below is a table giving a breakdown of these figures.

DIVISION OF TIMBER MANAGEMENT

During the season of 1946-47 there was still a strong demand for all kinds of forest products, resulting in continued activity in timber operations throughout the Province.

Although labor conditions were affected by the fact that prisoners-of-war were no longer available, this condition was to some extent offset by the return to bush operations of war service personnel and available civilians. As a consequence the timber operators were able to maintain production.

Weather conditions were generally favorable throughout the season enabling the operators to get their timber to the mills without delay.

A statement of timber cut during 1945-46 season and returned in 1946 is shown on Page 158, Table No. 1.

Statements showing production by administrative districts of the Province for the 1945-46 season are also shown on Pages 159-171, Tables No. 2 to 2L inclusive.

FOREST RESOURCES INVENTORY

A post war project of considerable importance "The Forest Resources Inventory" was organized and placed in operation early in the year. The method adopted after a thorough study of existing methods and the remarkable advances in aerial photography during the war involved a complete coverage of the forested area of the Province by the most up to date aerial photography. From this, planimetric base maps were to be prepared and volumetric estimates made from a combined use of aerial photographs and the standard methods of ground survey.

The area to be covered consisted of 140,000 square miles. Of this area the aerial photography and planimetric mapping on 125,000 square miles was let by contract to the Photographic Survey Company, Ltd., the balance of 15,000 square miles to be done by the Aerial Surveys Section of the Division of Survey and Engineering of the Department of Lands and Forests.

The Aerial Photography was underway by June 1st and continued throughout the summer and fall season. An area of 29,777 square miles of aerial photography was completed under contract and an additional area of photography was completed by the Department.

Planimetric mapping was underway by November and by February delivery of base maps from the contractor were started and 4,429 square miles were delivered by the end of the year.

Type mapping from aerial photographs was started on receiving delivery of base maps. An area of 3,600 square miles being completed by the end of the year ready for field checking and final checking of maps and completion of the inventory.

MANAGEMENT PLANS AND CONTROL

In writing more recent pulpwood and timber concession agreements in accordance with the Forest Management Act of 1947, clauses have been incorporated which provide for the submission of plans for the operation and management of the concession areas on a sustained yield basis or to maintain their production capacity. In order to supervise the preparation of these plans, the work has recently been put under the direction of a forester appointed for that purpose. It is his duty to prepare the outlines of the minimum requirements

LOADING TIMBER ON A TRUCK FROM A BOOM ON HERDRIDGE LAKE.

for the compilation of plans to work in co-operation with the operators in their preparations, to analyze them when submitted, and put into effect the control necessary to assure the application of the plans as approved by the Department.

Additional foresters have been assigned to supervise current management projects in the Districts, and as the plans of the various operators are approved and additional Crown management units are established, management foresters will take over active control of this phase of timber management.

As at the end of March, 1947, fifty agreements have been written, covering approximately 60,000 square miles, which contain clauses providing for some form of management control through the submission before beginning operations.

During the past year the available information on the preparation of management plans of other forest authorities was reviewed, as were the agreements, to obtain a basic understanding of their requirements. A manual was prepared outlining the minimum requirements for working or management plans, operating plans, and annual cutting applications and the compilation of forest survey data collected to form a basis for such plans and applications. When completed this manual was forwarded to all the operators concerned.

Plans are now being received from operators, a substantial indication that the industry is prepared to co-operate in this program. Many more are actively engaged in the preparation of plans, but owing to the shortage of foresters available for conducting this work as a result of war conditions, there has been considerable delay. Now that the war is over it is expected that the conditions will be stabilized considerably and a great expansion in this program will become evident.

Arrangements have been made to have a closer check on proposed operations through the requirements of more detail in annual cutting applications and the subsequent inspection of woods operations. By means of the control planned there will unquestionably be much better utilization and less opportunity for the continuation of wasteful practices which were difficult to control under war conditions.

TIMBER SALES—1946-47

Details of the 78 new sales of timber made during the season, indicate that 560 square miles of timber limits were sold.

During the season 53 timber licences, comprising 158.25 square miles, were abandoned.

The status of the timber licensed areas in Ontario as at March 31st, 1947, was therefore as follows:

	Area	
	No.	Sq. Miles
Licences and Renewals Issued 1946-47.....	878	11,276.25
Licences, in Suspense:.....	28	433.75
Total	906	11,710.00

This is 702.25 square miles less than that under licence as at March 31st of the previous year. The 934.25 square miles not accounted for by new sales and abandonments, is the result of adjustments in the areas of individual timber licences.

Pulpwood and Timber Agreements—1946-47

Area under pulpwood concession and timber agreement as at March 31st, 1947—56,745 square miles.

MILLS LICENSED 1946-47

The mills licensed during the season under the Mills Licensing Act were as follows:

Less than 5,000 ft. daily capacity.....	506
5,000 ft. to 30,000 ft. daily capacity.....	655
Over 30,000 ft. daily capacity.....	42
Number of Paper Mills.....	35
Total	1238

PULPWOOD EXPORTS

Detailed statements of pulpwood exports are shown on Pages 172 and 173.

SCALING

Scalers examinations were held during 1946 as follows:

(1) Fort William (2).....	June 29th Sept. 28th
(2) Minden.....	May 10th
(3) Swastika.....	Nov. 2nd
(4) Thessalon.....	May 31st

The results were as follows:

	Fort William	Minden	Swastika	Thessalon
Number of Candidates.....	95	46	47	48
Number obtaining full licences....	29	10	9	19
Number obtaining Sawlog licences	2	5
No. obtaining Pulpwood licences..	10	3	8	8

The remainder of the candidates were either recommended for licence after further experience, or were not successful.

REPORT
of the
INSPECTOR OF LEGAL
OFFICES
ONTARIO
1947

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER NO. 5, 1948

ONTARIO

TORONTO
Printed and Published by Baptist Johnston
Printer to the King's Most Excellent Majesty
1948

TO THE HONORABLE RAY LAWSON,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned begs respectfully to present to Your Honour the Annual Report of the Inspector of Legal Offices for the year ending 31st December, 1947.

L. E. BLACKWELL,
Attorney-General.

Toronto, March 19th, 1948.

Report
of the
Inspector of Legal Offices
Ontario, 1947

Parliament Buildings,
Toronto, Ontario.

THE HONOURABLE L. E. BLACKWELL, K.C.,
Attorney-General, Province of Ontario.
Parliament Buildings, Toronto.

SIR:

I have the honour to present to you my Report as Inspector of Legal Offices for the year ending December 31st, 1947.

It was expected that there would be a slackening off in the volume of business in the Land Titles and Registry Offices, and this has been the case regionally, in that in Southern Ontario, the volume was down, and in Northern Ontario the volume was up. The latter, of course, did not affect the former, but the total was still considerably in excess of the total for the year 1945. While the cost of operation of these offices is up, the surpluses paid to the various municipalities remain very substantial.

The volume of business in the various court offices was larger than ever. There were only two small deficits in operating costs. Some of the surpluses paid to the Province have increased.

It appears that the County and District Court business is on the increase. Large numbers of registrations of liens, bills of sale and chattel mortgages appear on the records in all the more populous centres in the Province.

The number of cases heard in the Magisterial Courts has increased, particularly in the cities, and the volume of fines, while seasonal, appears to be growing uniformly in most jurisdictions.

Division Court actions are on the increase, but this is confined to the large centres of population. The rural courts seem to have only a few cases each, and do not vary in good times or bad. It is most difficult to obtain the services of suitable individuals for these rural courts, as the earnings do not provide any incentive.

The total revenue from all sources is over two and three-quarter million dollars.

Mr. Moore has had a busy year in the Land Titles and Registry Offices. He has had a number of interesting problems to solve. We find it difficult to obtain and keep suitable personnel in the Land Titles Offices. Mr. Moore has revised the Land Titles Rules, Forms and Tariff, and it is

hoped this will be effective April 1st, 1948. For this excellent piece of revision and simplification he deserves much credit. Mr. Corey has been very valuable in his work in various offices, revising plans, descriptions, and helping out where the office was pressed with work.

The Auditors have all been very busy. Messrs. Dignam, Reddin and Gourley have not only adhered to their schedules, but have done extra audits when required, and have kept the outside staff to a point of efficiency where the work has been carried out promptly and well.

The outside offices have all kept their work up to date, and have co-operated with the public, who have had occasion to use these offices. While there are, of necessity, some complaints, these are minor, and few, and have been ironed out without difficulty.

Our own office here is just as busy as ever, and all the members have played their part faithfully and well. To all I express my deep appreciation, especially to Misses Kearney and Bailey, and to Miss Irish, who has taken the responsibility of handling all financial matters for many years and has performed this arduous task most capably.

The following is the total revenue collected by the Legal Offices of the Province and the disposition of such money:

**TOTAL REVENUE COLLECTED DURING 1947
LEGAL OFFICES, PROVINCE OF ONTARIO**

Magistrates' Fines	\$ 484,441.57
Magistrates' Fees	42,568.29
(The above amounts do not include statutory amounts paid to municipalities, nor fines and fees paid direct by Magistrates to the Federal Government and The Liquor Control Act.)	
Registrars of Deeds and Local Masters of Titles, Fees	87,106.03
Registrars of Deeds and Local Masters of Titles, Land Transfer Tax	1,039,877.96
Local Registrars, S.C.O., County and District Court Clerks and Surrogate Registrars, Cash Fees	287,282.53
Local Registrars, S.C.O., County and District Court Clerks and Surrogate Registrars, Law Stamps	600,405.85
Crown Attorneys and Clerks of the Peace, Fees	72,932.61
Crown Attorneys and Clerks of the Peace, Fines and Estreated Bail	2,983.45
Sheriffs' Fees	110,713.10

Department of Lands and Forests	\$ 60,663.09
Department of Highways	110,468.96
	<u>\$ 171,132.05</u>

I attach hereto the schedules and statements in reference to the specific details of the offices and administration:

1. Statements—Osgoode Hall Offices (Surrogate Clerk, Administrative Branch, Appellate Division and Master's Office).
2. Financial Statement of Judicial Offices, namely, Sheriffs, Surrogate Judges, Local Masters, S.C.O., County and District Court Clerks and Surrogate Registrars, Crown Attorneys and Clerks of the Peace.
3. Financial Statement respecting Local Masters of Titles and Registrars of Deeds.
4. Financial Statement respecting Magistrates.
5. Statement re Juvenile Courts.

Statement re Division Court Clerks and Bailiffs.

7. Appointments.

All of which is respectfully submitted.

I have the honour to be, Sir,

Your obedient servant,

HUGH H. DONALD,

Inspector of Legal Offices.

RULES

Made under

THE LAND TITLES ACT

(Effective April 1st, 1948)

THE LAND TITLES ACT

O. Reg. 45 48.

New.

General.

Made—10th March, 1948.

Filed—11th March, 1948, 3.15 p.m.

RULES MADE UNDER THE LAND TITLES ACT

PART I

FIRST REGISTRATIONS

APPLICATIONS FOR FIRST REGISTRATIONS

1.—(1) The application for a first registration of land under the Act shall be in form 1.

(2) Where the application is for the registration of,

(a) a nominee, under subsection 1 of section 5 of the Act; or

(b) a person referred to in subsection 2 of section 5 of the Act.

the consent in writing of the nominee or his solicitor, or of the vendor or his solicitor, shall be lodged with the application.

(3) Where the application is made under subsection 1 of section 6 of the Act, the consent in writing of the persons, if any, whose consent is required shall be lodged with the application.

POSSESSORY TITLE

2.—(1) Where the application is for registration with a possessory title only, there shall be lodged in the office with the application an affidavit made by,—

- (a) (i) the applicant;
- (ii) one of the applicants, if more than one; or
- (iii) some person whose consent is required to the application; and
- (b) the solicitor where the application is made through a solicitor;

to the best of their respective knowledge, information and belief, verifying the description.

(2) The affidavit shall be to the effect that,—

(a) the applicant, either alone or with the person, if any, consenting to the application and either subject or not to incumbrances, is well entitled for his or their own benefit, or as holding the land on trust for sale, or as a trustee, or otherwise having a power of selling the land, as the case may be, to an estate in fee simple, or the power of disposing by way of sale of an estate in fee simple in the land;

(b) the actual possession, or receipt of the rents and profits thereof is in accordance with the applicant's title, stating who is in actual occupation of the land and if a tenant of the applicant is in occupation for what term he claims to be entitled;

(c) the applicant or his nominee is entitled under the Act to be registered as the owner of the land; and

(d) the documents of title, if any, mentioned in the schedule to the affidavit comprise amongst others, if the fact be so, the last conveyance or other document under which the applicant's title is derived.

(3) The affidavit shall give,—

(a) the particulars of any mortgage or charge on the land; and

(b) where the mortgage or charge is registered in the registry office, the registration number.

3. The entry of the first registration shall state the title of the applicant to be subject to the incumbrances mentioned or so many of them as shall subsist at the time the entry is made.

4.—(1) Where the application is not made through a solicitor, the applicant shall file the certificate of a justice of the peace of the county or district in which the land is situate, stating that the justice is acquainted with the applicant, and that he believes him to be the owner of the land mentioned in his application, or is otherwise entitled thereto as set out in the certificate.

(2) Where the application is made through a solicitor, a certificate of the solicitor to the like effect or the certificate of the justice of the peace shall be filed.

ABSOLUTE OR QUALIFIED TITLE

EVIDENCE

5.—Where the application is for a first registration with absolute or qualified title it shall be supported, unless any be dispensed with by the master of titles at Toronto by the following particulars,—

- (a) the title deeds, if any, and all evidence of title relating to the land which is in the possession or power of the applicant;
- (b) certified copies of,—
 - (i) All other registered instruments affecting the land or of the memorials thereof; or
 - (ii) all since the last judicial certificate, if any, under *The Quietting Titles Act* was given;
- (c) the certificate of the registrar of deeds of the registry division in which the land lies, showing what instruments are registered affecting the land and giving shortly the particulars thereof;
- (d) proofs of any facts which are required to be proved in order to make out the title and which are not established by the other produced documents, unless dispensed with by the proper master of titles until a future stage of the investigation; and
- (e) an affidavit, form 2, of the person whose title is to be investigated.

AFFIDAVIT OF APPLICANT

6. The affidavit may be made by some person other than the person whose title is to be investigated, or as to part may be made by one person and as to the other part by another person.

MODE OF PROOF

7.—The proofs required may be,—

- (a) by affidavit or certificate;
- (b) given viva voce; or
- (c) in any other manner or form satisfactory to the proper master of titles.

SHERIFF'S CERTIFICATE

8. Before the application is granted, the certificate of the proper sheriff shewing what writs are in his hands affecting the land shall be filed.

PAYMENTS OF TAXES AND ASSESSMENTS

9. Before the application is granted, where an examination of title is required, satisfactory evidence shall be given by certificate, affidavit or otherwise, that all

taxes rates and assessments, for which the land is liable, prior to the date up to which it is desired that the land shall be declared free from taxes, have been paid or as the fact may be.

PRODUCTION OF FURTHER EVIDENCE

10. Where the proper master of titles is not satisfied with the evidence of title produced in the first instance, he shall give a reasonable opportunity of producing further evidence or of removing defects in the evidence produced.

PUBLICATION OF NOTICE

11.—(1) Before the completion of a first registration the proper master of titles shall direct that notice, form 3, of the application be published in *THE ONTARIO GAZETTE*, and may direct that the notice be published in any newspaper or newspapers for such period as he thinks expedient.

(2) Proof of the publication of the notice shall be in form 4.

(3) The registration shall not be completed until after the expiration of at least four weeks from the first publication of the notice, or such other period as the proper master of titles may appoint.

(4) Notice of any number of applications may be included in one publication if the proper master of titles thinks fit, and in that case the expense of the publication shall be borne by the applicants in such proportions as the proper master of titles may direct.

(5) The proper master of titles instead of causing notice of the application to be published shall direct that a printed or typewritten general notice, or several copies be,—

- (a) posted upon the property in a conspicuous place or places, and a copy left at the residence of the occupant of each contiguous property which is occupied; or
- (b) where any contiguous property is unoccupied, left at the residence of the occupant of the nearest occupied property lying at the same side as the unoccupied contiguous property.

(6) Where several persons belonging to the same family occupy any property, the head of the family for the time being shall be deemed the occupant within the meaning of this rule, and where there is any doubt as to the occupant the proper master of titles shall give directions in respect thereof.

(7) The proper master of titles may dispense with the notice,—

- (a) where the applicant,—
- (i) is the original grantee from the Crown;
 - (ii) produces all the title deeds by which the title is traced from that grantee; or
 - (iii) produces all the title deeds by which the title is traced for forty years by a registered title; or
- (b) where the applicant or some one through whom he claims has obtained a certificate of title under *The Quieting Titles Act*, or a tax deed which has been validated by an Act of the Legislature, and the applicant produces all the title deeds subsequent to the certificate or tax deed; and
- (c) where the applicant is in actual possession of the land or where every other person in actual possession of the land is notified or where the land is vacant.

NOTICE TO ADVERSE CLAIMANT

12. Where there appears to exist any claim adverse to, or inconsistent with, that of the applicant to, or in respect of any part of the land, the proper master of titles shall direct a notice, form 5, to be mailed to or served upon the adverse claimant, his solicitor or agent.

ADDITIONAL NOTICES

13. The proper master of titles, before granting the certificate of registration may require from time to time any further publication or any other notice to be mailed or served.

OBJECTIONS

14.—(1) A person having an adverse claim, or a claim not recognized in the application may, at any time before the registration is completed, file and serve upon the applicant, his solicitor or agent, a short statement of his claim.

(2) The claim shall be verified by an affidavit to be filed therewith and shall contain an address in Ontario at which service upon the objector may be made.

HEARING OF OBJECTIONS

15.—(1) The applicant or his solicitor shall obtain an appointment before the proper master of titles for hearing any objection which shall have been duly lodged in the office.

(2) Service of the appointment shall be made on the objector or his solicitor seven clear days before it is returnable.

(3) The parties may be heard in person or by counsel.

COSTS

16.—(1) The proper master of titles may fix costs or order costs to be paid by any person after taxation by a taxing officer of the Court.

(2) Upon taxation the like fees shall be payable to the taxing officer in stamps as are payable upon a taxation under an order of a judge of the court and the practice and rules applicable to a taxation under a judge's order shall apply.

CHANGE OF INTEREST

17.—(1) In case of death or change of interest pending registration, the proceedings shall, subject to the provision of the Act, be available to such person as the proper master of titles an application, having regard to the rights of the several persons interested in the land, may direct.

(2) The court or the proper master of titles may,—

(a) require notices to be given to persons becoming interested; or

(b) make an order for discontinuing or suspending or carrying on the proceedings, or otherwise in relation thereto, as under the circumstances may be just.

CAUTION AGAINST FIRST REGISTRATION

18.—(1) A caution to be registered against first registration shall be in form 6 and an affidavit, form 7, in support shall be lodged therewith.

(2) The period to be limited by the notice, form 8, to be served on the cautioner shall be 7 days, or such other period of not less than 4 days as the proper master of titles may direct.

(3) The notice may be served either personally or by mail as the proper master may direct.

PART II

DEALINGS AFTER REGISTRATION

NOTICE BY MASTER TO SHERIFF

19. The notice to be given under subsection 1 of section 162 of the Act shall be in form 9.

CAUTION AGAINST DEALING WITH LAND

20.—(1) A caution to be registered under section 74 of the Act shall be in form 10 and an affidavit, form 11, in support of the caution shall be lodged therewith.

(2) The period to be limited by the notice, form 12, to be served on cautioner under section 75 of the Act shall be 7 days or such other period, not less than

4 days, as the proper master of titles may direct.

21.—(1) The proper master of titles may withdraw or cancel the entry of any caution upon receiving the consent in writing, form 13 of the cautioner or his solicitor.

(2) The consent shall be attested and verified by an affidavit in form 14.

(3) The application to terminate a caution shall be in form 15.

(4) At any time before the expiration of the period limited by the notice given under rule 20 or given on account of any dealing lodged for registration, or any extension thereof which may be granted by the master, the cautioner may show cause why the caution should be continued, or why the dealings should not be registered.

INHIBITIONS

22.—(1) An application to the proper master of titles for an inhibiting order under section 80 of the Act shall be in form 16.

(2) Where the application is to the court it shall be entitled "In the Supreme Court of Ontario."

RESTRICTIONS

23.—(1) An application under section 81 of the Act shall state the particulars of the directions or restrictions required to be entered on the register.

(2) An application to withdraw or modify a direction or restriction shall be attested and verified.

24. Before an entry is made upon the register under subsection 2 of section 99 of the Act the consent in writing of the persons to be entered as the registered owners of the land or charge, stating the particulars of the entry required, shall be lodged in the office.

CHARGE OF LAND

25.—(1) The instrument by which any charge of freehold or leasehold land, form 17, is made under section 29 of the Act shall be lodged in the office and the execution by the registered owner of the land shall be attested and verified.

(2) Where it is desired that an entry be made on the register,—

(a) negating the implied covenants referred to in sections 30 and 31 of the Act;

(b) contrary to the powers given to a registered owner of a registered charge by sections 32, 33 and 34 of the Act; or

(c) contrary to the provisions of section 35 of the Act;

a separate written application in that behalf shall be filed giving the particulars of the entry required to be made, and shall be signed, attested and verified.

(3) The verification may where practicable be made by the same affidavit as that verifying the charge

(4) Where a foreclosure or sale has been enforced by the registered owner of the charge, the proper master of titles shall, upon the application of the person entitled to the benefit of the foreclosure or sale, and upon proper proof, make all necessary entries in the register.

(5) The applicant shall lodge a draft of the entry to which he considers himself entitled.

TRANSFER OR POSTPONEMENT OF CHARGE

26. A transfer of charge, form 18, shall be attested and verified.

27. A postponement of charge shall be in form 19 attested and verified.

CESSATION OF CHARGE

28. Where a charge is created after the first registration of the land, the cessation thereof shall be in form 20 attested and verified.

29. Where the cessation of a charge entered on the register is required to be noted under section 36 of the Act, and the application, form 21, is not made or concurred in by the registered owner of the charge, proof of the satisfaction of the charge shall be lodged with the application.

CANCELLATION OF ENTRIES IN EXECUTION BOOK

30.—Where a copy of a writ of execution affecting the land of the registered owner has been received by the proper master of titles and there is afterwards filed by or on behalf of the owner or any person interested in the land,—

(a) a subsequent certificate of the sheriff shewing,—

(i) that there is at the date thereof no execution in his hands against the lands of the owner and that none is outstanding for renewal or outstanding with a return of lands on hand for want of buyers or to the like effect; and

(ii) that no lands have been sold by the sheriff under an execution against the owner within six months preceding the date thereof; or

(b) any other certificate of the sheriff shewing that the executions previously entered in the execution book have ceased to affect the land of the owner,

the master may cancel in the execution book all previous entries of writs against the owner.

TRANSFER OF LAND

31. A transfer of land shall be in form 22 attested and verified, with an additional affidavit as to the identification of parties and marriage status in form 23.

LAND NOT REGISTERED BUT INCLUDED IN TRANSFER OR CHARGE

32.—(1) Where a transfer or charge affects land or a charge of which the transferor or chargor is the registered owner, and also land or a charge of which he is not then the registered owner, the proper master of titles may register the instrument in respect of the land or charge of which the transferor or chargor is the owner.

(2) Where the transferor or chargor subsequently becomes the registered owner of other land, or of another charge included in the transfer or charge, the master may register the transfer or charge as to the other land or charge.

ENTRY NEGATING IMPLIED COVENANTS ON TRANSFER OF LEASEHOLD LAND

33. An application requiring an entry to be made on the register negating the implied covenants under section 52 shall be in form 24, signed, attested and verified.

EVIDENCE OF TRANSMISSION OF REGISTERED OWNERSHIP

34. Where it is required to prove the fact of a person having become entitled to any land or charge, in consequence of the death of a registered owner, the application shall be in form 25 or 26.

RECORD OF DEATH OF OWNERS

35. Where application for the entry of a transmission upon death of a registered owner has been granted, and a copy of the will of the owner, or of letters of administration to his estate, has been filed upon the application, the name of the deceased owner shall be entered in the alphabetical index of owners in the column headed "owner" with the word "deceased" appended thereto, and in the column headed "no. of instrument" shall be inserted the number in the receiving book of the application for transmission.

DEATH OF REGISTERED OWNER, AND ESTATES IN DOWER OR BY THE CURTESY

36.—(1) An application for 25, 26 or 27 under section 56, 57, 58 or 73 of the Act, shall be supported by the affidavit of the applicant, shewing the existing rights of the persons interested in the land or charge, as the case may be.

(2) Where there is an intestacy the affidavit shall be in form 28.

REGISTRATION OF A LEASE OR NOTICE OF A LEASE

37.—(1) Where a notice of a lease or agreement for a lease is to be registered under section 72 of the Act, the lease or agreement, when verified and lodged with the application, form 29, shall be entered in full in a book to be kept for the entry of leases.

(2) Notice of the lease shall by a short memorandum be entered in the register of the land, stating the fact of the lease and the length of the term and referring to the entry in the book kept for the entry of leases.

(3) Where the registered owner of the land concurs he shall be a party to and sign the application, or consent in writing thereto, and his signature shall be attested and verified.

(4) Where the registered owner does not concur such notice shall be given him under section 72 of the Act as the proper master of titles deems reasonable.

TRANSFER OF LEASEHOLD LAND

38. A transfer of leasehold land shall be in form 30 signed attested and verified.

ENTRY AS TO EXCEPTIONS, ETC., UNDER SECTION 24 OF THE ACT

39.—(1) An application requiring an entry to be made on the register under section 24 of the Act shall state the particulars of the entry required.

(2) The evidence in support of the application shall be lodged therewith and the application shall be proceeded with in such manner as the proper master of titles directs.

CONDITIONS AND COVENANTS ANNEXED TO LANDS

40. An application under section 101 of the Act may be according to form 31.

LAND CERTIFICATES

41. A land certificate, form 32, shall,—
(a) be under the seal of the office;
(b) contain a copy of the registered description of the land;

- (c) contain the name and place of residence of the registered owner; and
- (d) contain a short statement of such other matters as may for the time being be entered on the register as affecting the land.

CERTIFICATE OF CHARGE

42. A certificate of charge shall be under the seal of the office, and may at the option of the applicant contain a copy of the entry on the register of the charge with a reference to or a copy of the registered description of the land or the like particulars as in a land certificate.

ABSTRACTS AND DOCUMENTS TO BE RETAINED IN OFFICE

43. Abstracts and copies of documents and documents for registration lodged in the office shall be retained pending completion of the registration to which they relate, and afterwards shall be dealt with as the proper master of titles directs.

APPLICATIONS, TRANSFERS, ETC., HOW WRITTEN AND FOLDED

44. Applications under the Act and material in support, and transfers, charges, cautions and other documents lodged for registration shall be written on one side of foolscap paper of good quality and shall be folded twice across, and neatly endorsed.

INSTRUMENTS EXECUTED UNDER POWERS OF ATTORNEY

45. Where a document lodged for registration has been executed under a power of attorney, the power of attorney, form 33, shall be produced and verified and evidence furnished in accordance with form 34.

LODGING THE POWERS OF ATTORNEY

46.—(1) A power of attorney, of which the original with proof of the execution, or a copy certified by,—

- (a) a registrar of deeds under *The Registry Act*;
- (b) the master of titles, or a local master of titles;
- (c) the Provincial Secretary or his deputy or assistant; or
- (d) the Registrar under *The Loan and Trust Corporations Act* where the instrument is filed in his office;

lodged with the proper master of titles shall be copied into a book for that purpose, and the provisions of rule 45 shall, as far as may be, apply to the powers and instruments executed thereunder.

(2) The proper master of titles may use the same book for the entry of leases

under rule 37 and powers of attorney under this rule except where the Inspector otherwise directs.

DOCUMENTS EXECUTED BY CORPORATIONS

47.—(1) Where a document is executed by or on behalf of a corporation the execution shall be proved by the affidavit of a subscribing witness.

(2) An affidavit of an officer of the corporation, form 35, shall also be lodged.

(3) A copy of the by-laws conferring the authority to execute the documents shall be lodged.

TRANSFER BY SHERIFF

48. A transfer by a sheriff under section 67 of the Act shall be in form 36.

DESTRUCTION OF EFFETE INSTRUMENTS

49. A proper master of titles may direct the destruction of any instrument in his possession or custody where superseded by entries in the register or where it has ceased to have any effect.

STATIONERY CHARGES

50. All copies, entries, or engrossments or other writings and all stationery and forms supplied by the office in the course of registration, shall be paid for by the applicant.

VERIFICATION OF DOCUMENTS

51.—Where the signing or execution of any document is required to be verified, the signing or execution shall be attested and the verification shall be by affidavit,—

- (a) in form 37 in the case of a transfer of land where the transferor is unmarried, and
- (b) in form 38 in the case of execution of documents with bar of dower.

52.—(1) The register shall be made in such mode that where there is a registered owner of any parcel of land, that land and any transactions relating thereto authorized to be entered on the register shall be entered on a page or succession of pages so as to form a separate record in the register, hereinafter called the register of the parcel.

(2) Each parcel of land separately entered on the register shall be identified by a separate number, and where the land originally registered is dealt with in separate parcels, each new separate parcel shall refer to the number of the original parcel.

(3) The proper master of titles shall note upon the register of the parcel of the transferor the number of the parcel of the transferee's title, and upon that of the transferee the number of the parcel of the transferor.

(4) The proper master of titles may enter the whole or any part of a parcel of land as a new parcel either alone or with other land and may call in the outstanding land certificate for the purpose of making thereon all proper entries or memoranda or for cancellation, and upon making the entries shall note in the register of the old parcel the fact of the entries, shewing in the note the land so entered; and thereafter the page on which the land is newly entered and the page or pages succeeding it set apart for the entry of dealings in respect thereof, shall be deemed the register of the title of the land.

(5) The proper master of titles may withdraw from the register, by cancellation or otherwise, any notice or entry which he is satisfied no longer affects the registered land.

THE COMPANIES REGISTER

53.—(1) There shall be kept in every land titles office a register to be called "the companies register."

(2) There shall be entered in the companies register short particulars of the powers of companies in respect of land, of the amalgamation or absorption of companies or of changes in the names of companies or copies of or extracts from the instruments by which the amalgamation, absorption or changes are affected, in case a company affected by any such instrument desires the registration thereof, or in case any person interested requires the registration of an instrument.

(3) Where a company desires to be entered as owner of land or of a charge, or transfers or charges land it shall produce to the proper master of titles the charter or other instrument conferring the authority to hold mortgage or transfer land, or an exemplification, or a copy thereof, certified by the proper officer in that behalf, or shall produce such other evidence as is satisfactory to the proper master of titles.

(4) Where the original or exemplification is not lodged, a copy of the original or exemplification shall be lodged, and such copy shall be compared in the office with the original or exemplification, and a note of such comparison having been made shall be written upon the copy by the master or clerk who makes the comparison.

(5) The proper master of titles shall copy into the companies register any instruments produced as aforesaid, or shall enter into such register extracts therefrom, with such particulars as are required to show the powers of the company to hold, transfer or mortgage land.

(6) The entries by this rule authorized or required may in the offices at St. Thomas and Ottawa be made in the same book as powers of attorney until the Inspector otherwise directs.

DESCRIBING LANDS IN DOCUMENTS

54. Where land is described by courses which are not stated to be astronomic, the proper master of titles may require the governing line for such courses to be stated.

SUBSTITUTED DESCRIPTION IN REGISTER

55. Where the registered owner of any land is desirous that a revised description be substituted for the registered description, the proper master of titles may cause a revision of the description and the revised description shall henceforth be the registered description of the land.

WITHDRAWAL OF LAND

56. An application for the withdrawal of land from the operation of the Act shall be in writing, shall describe and identify the land proposed to be withdrawn, and shall set out the circumstances which render the withdrawal expedient.

PREPARATION AND SERVICE OF NOTICES

57.—(1) All notices and summonses required to be given or served shall be prepared by the applicant, and be legibly written.

(2) Copies of notices shall be under the seal of the office.

(3) If the service of a notice or summons is personal, it shall be proved by affidavit.

(4) Every notice required to be given shall, if sent by post and not returned, be deemed to have been received within seven days exclusive of the day of posting.

(5) On the return of a letter containing a notice, the proper master of titles shall direct service of the notice,—

- (a) personally;
- (b) substitutionally; or
- (c) by publication.

(6) Service on the solicitor or the solicitor's agent of any person shall be deemed good service on that person.

NOTICES TO BE PREPARED AND SERVED BY APPLICANT

58. Where in any proceeding a notice is required to be given the applicant shall pay the proper fees for preparing the notice, and prepare the requisite copies, and see that the notice is served.

SERVICE WHERE A SOLICITOR ACTS

59.—(1) Where a party is represented in the office of a master by a solicitor, all notices, orders, appointments and other documents which do not require personal service, may be served,—

- (a) upon the solicitor; or
- (b) where the solicitor does not reside in the county or district where proceedings are conducted, upon his agent named in "The County Solicitors and Agents' Book" under rule 197 of the rules of practice and procedure of the Supreme Court, or upon his Toronto agent named in "The Toronto Solicitors' and Agents' Book" under rules 195 and 196 of the rules of practice of the Supreme Court.

(2) Where a solicitor has not named an agent in either of the books mentioned in subrule 1, the mailing of any notice, order, appointment or other document, addressed to the office of the solicitor, post-paid and registered, shall be deemed sufficient service as of the date of mailing.

ADDRESS BOOK

60. The addresses furnished under section 115 of the Act shall be entered in an address book to be kept in each land titles office for that purpose.

DISCRETIONARY POWER OF MASTER

61. Where the signing or execution of any document or instrument, or any act is required by these rules to be attested, verified or done by a solicitor, the proper master of titles if he thinks fit, may accept the document or instrument though not so attested or verified, or may give directions in respect of the act though not so done; and he may

- (a) accept an instrument though not verified by an affidavit of a subscribing witness if satisfied of the execution thereof;
- (b) accept a covenant or other indemnity to protect the Assurance Fund in respect of any matter as to which a question may arise; and
- (c) accept and register documents which are irregular in form.

INDEXES, INSPECTION, COPIES AND EXTRACTS

62.—(1) The proper master of titles shall keep alphabetical indexes corresponding as nearly as may be to the indexes provided under The Registry Act.

(2) Any person may inspect the indexes.

(3) Subrule 1 shall not apply to,—

- (a) a transferor of land or the maker of a charge or document by virtue of which cessation of incumbrances or leases is noted;
- (b) a claimant of a mechanics' lien; or
- (c) a claimant under The Conditional Sale Act.

CERTIFICATE OF SEARCH

63. The proper master of titles may issue a certificate of search in such form as he thinks fit.

RECEIVING AND FEE BOOK AND SUSPENSE BOOK

64.—(1) The master of titles at Toronto and each local master shall keep books to be called the "receiving and fee book," and the "suspense book," in the form used in the office of land titles at Toronto.

(2) There shall be entered in the receiving and fee book forthwith upon receipt,—

- (a) all instruments lodged for registration; and
- (b) all fees, whether payable in money or stamps, shewing the separate items of service.

(3) Where the Inspector so directs the particulars of searches shall be entered in a separate book, and only the daily total of fees for searchers shall be entered in the receiving and fee book.

(4) Upon the completion of the entry of an instrument in the register, a note thereof shall be in the receiving and fee book, and from time to time the proper master of titles shall enter from that book into the suspense book all instruments where registration is delayed.

(5) As the registration of instruments entered on a page of the receiving and fee book or their transfer to the suspense book is completed, the master shall rule a diagonal line across the page of the receiving and fee book so as to indicate all instruments previously entered therein have been registered, rejected or entered on the suspense book.

(6) The pages of the suspense book shall be dealt with in like manner where the instruments entered are disposed of.

BOOK FOR CAUTIONS BY EXECUTORS AND ADMINISTRATORS

UNDER THE DEVOLUTION OF ESTATES ACT

65.—(1) In each land titles office there shall be kept a book called the "Executors and Administrators Caution Book,"

in which shall be entered all cautions lodged by executors and administrators under sections 12, 13 and 14 of The Devolution of Estates Act, and the caution need not be entered on the register of any particular parcel of land.

(2) The entries in the book shall be indexed under the name of the testator or intestate.

TARIFF OF FEES

66. The fees set forth in schedule 1 shall be the fees payable to the proper masters of titles.

FEES

67.—(1) Fees payable to the master of titles at Toronto shall be paid in law stamps and no entry shall be made on the register by him before the stamps have been affixed.

(2) Fees payable to local masters shall be paid in money.

68. Fees received in respect of applications for first registration and other matters entered in the procedure books shall, upon the application or other matter being disposed of, be entered in the receiving and fee book, and a note made in the procedure book.

69. The master of titles and every local master shall, on or before the 15th day of January in each year, make a return in duplicate to the Inspector of legal offices under oath of all fees received by him up to and including the 31st day of the previous December.

APPLICATIONS TO COURT AND APPEALS

70.—(1) On an application to the court being made on the requirement of, or appeal from, the proper master of titles or under section 118 or 119 of the Act, a statement, form 39, shall be prepared by the applicant and settled and signed by the master of titles at Toronto.

(2) Applications to the court and appeals from the proper master of titles shall be in the same manner and subject to the same rules as appeals from the master of the Supreme Court, except that the notice of appeal shall be served within 7 days after the decision complained of, or within such further time as may be allowed by a judge of the court or by the master of titles at Toronto and the motion shall be returnable within 14 days after the decision, or within such other time as may be allowed.

(3) No appeal from a decision or order of the proper master of titles or of the court shall affect any registered dealing for valuable consideration before a notice in writing of the appeal has been lodged and a note thereof made in the register.

HOURS OF ATTENDANCE

71.—(1) The office of Land titles at Toronto shall be open from 10 a.m. until 4 p.m. each day except Saturday and holidays.

(2) On Saturday the office shall be open from 10 a.m. until 1 p.m.

(3) Except on Saturday and holidays the office of a local master shall be open from 10 a.m. until 4 p.m.

(4) On Saturday the office of a local master shall be open from 10 a.m. until 1 p.m.

(5) During long vacation, the office at Ottawa shall be open from 9 a.m. until 1 p.m.

(6) Nothing in this rule shall limit the office hours of the office staff.

TERRITORY SEPARATED FROM REGISTRY DISTRICT

72.—(1) Where any territory has been separated from a registry district the local master of that district shall prepare and certify true copies of the existing registers of the parcels of land in the territory so separated and he shall state in his certificate whether there is in his office any execution which affects the land, and if there is any execution shall give the particulars.

(2) The proper master of titles shall deliver to the local master of titles of the registry district in which the separated territory is situate,—

- (a) all original instruments in his hands relating exclusively to the lands;
- (b) certified copies of all documents relating to the lands and to other lands; and
- (c) a certified copy of executions affecting any of the lands so separated.

(3) The local master of titles of the separated territory shall upon the receipt of the certified copies of the registers, register as owners of the several parcels the persons who appear to be the owners thereof subject to the charges, cautions, inhibitions, qualifications and other incumbrances affecting the parcels

73. Land in unsurveyed territory shall not be registered unless the land is described in a manner that the proper master can lay it down on a map of the district in which it is situated.

SURVEYOR'S CERTIFICATE ON PLANS

74. The certificate and verification by an Ontario land surveyor under sections

107 and 109 of the Act shall be in form 40.

75. These rules shall come into force on the first of April, 1948.

FORM 1

The Land Titles Act

To—

(name of proper master of titles at) A.B., of , being entitled for his own benefit to an estate in fee simple in the land in ,

containing by estimation acres and described in the schedule appended applies to be registered (or where applicable, to have registered in his stead C.D., of) as owner of the land (or leasehold land) with (in the case of freehold land) a possessory title (or with an absolute title, or, in the case of leasehold land with or without a declaration of the lessor's title to grant the lease, as the case may be).

Subject to the following charges and incumbrances (if any):

The address of the said A.B., (and C.D. respectively) for service is at (if the application is made through a solicitor, give his office address).

Dated at this day of 19 .

(Signature of the applicant or his solicitor)

C.D. approves this application.
(Signature of C.D.)

FORM 2

The Land Titles Act

I, of make oath and say:

1. I am the absolute owner in fee simple in possession (or as the case may be, repeating the words of the application) of the land mentioned in my application.

2. There is no charge or other incumbrance affecting my title to the land (except, stating any incumbrances).

3. I am not aware of any claim adverse to or inconsistent with my own to any part of the land claimed by me or to any interest therein (except, specify the adverse claim, giving the name and address of the claimant if known, and stating how the claim arises).

4. The deeds, instruments and evidence of title which I produce in support of my application, set out in schedule 1, are all the title deeds, instruments and evidence of title relating to the land which are in my possession or power.

5. The title deeds and evidence of title relating to the land, set out in schedule 2, are in possession or power of (naming the person and giving his address).

6. I do not know where, or in whose possession or power, are the title deeds and evidence of title set out in schedule 3. (Here set out the facts showing the searches made for the missing deeds upon which it is intended to rely as sufficient to let in secondary evidence; and where there are no other title deeds, or evidence except as in schedule 1, so state and omit sections 5 and 6).

7. I am (or A.B. is and show under what claim of title) in possession of the

land, and to the best of my knowledge and belief possession has always accompanied the title under which I claim, since the year when one through whom I claim, took possession, and prior thereto the land was in a state of nature (if possession has not always accompanied the title under which the petitioner claims, state the facts as to the actual possession).

8. I am now in actual occupation of the land (or if a tenant of the applicant is in occupation, state how he claims to hold and how he in fact holds; and if the tenancy is under an instrument in writing produce it; and if no person is in actual occupation so state).

9. To the best of my knowledge, information and belief this affidavit discloses all facts material to my title.

10. There are no arrears of taxes against the land, (or according to the fact) nor has the land been sold for taxes during the past eighteen months, nor under execution during the past six months, and I do not know of any writ of execution in the hands of the sheriff against me, or affecting the land.

11. To the best of my knowledge, information and belief, no person has any right of way, or of entry, or of damming back water, or of overflowing, or of placing or maintaining any erection, or of preventing the placing or maintaining any erection on, in, to or over the land, (except, giving the names and addresses of any person having any easement or right, and stating the particulars and nature thereof); and the land is not subject to any right of way or to any other easement or other dominant right.

12. The land is not worth more than \$, including the buildings and fixtures thereon, and the buildings and fixtures are worth at least \$ (Where more than one parcel is included in the application, give the value of each parcel).

13. I am married, and the name of my wife is (or I am not married); and we are each 21 years of age or over (as the case may be).

Sworn, etc.

Recent Legislation

and

Rules

The attention of all officials is directed to the following legislation passed in 1947:

The Children's Protection Amendment Act, 1947, chapter 13, which became effective on June 1, 1947.

The Coroners' Amendment Act, 1947, chapter 18, which increases the fees of a medical witness.

The County Courts Amendment Act, 1947, chapter 20, which increases the salary of the County Court Clerk for attendance at sittings of the court.

The County Judges Amendment Act, 1947, chapter 21, which provides for a percentage of Judge's fees payable in law stamps to the Surrogate Court Judge of the County or District on a yearly basis.

The Crown Attorneys Amendment Act, 1947, chapter 23, which increases the fees of the Crown Attorney on appeals from Magistrates.

The Highway Traffic Amendment Act, 1947, chapter 45, particularly Part 13A.

The Jurors Amendment Act, 1947, chapter 52, which deals with the number of jurors to be summoned in certain Counties and increases the per diem rate payable to the juror, as well as the mileage rate.

The Juvenile and Family Court Amendment Act, 1947, chapter 53, particularly clauses dealing with the expenses of the court.

The Planning Amendment Act, 1947, chapter 75.

The Police Amendment Act, 1947, chapter 77, and in connection with this, see also section 7 of the Statute Law Amendment Act, Number 2, 1947.

The Public Service Act, 1947, chapter 89, which became effective March 1st, 1948.

The Registry Amendment Act, 1947, chapter 95, which increases some of the fees on registration of documents, and in this connection, see the clauses in the Statute Law Amendment Act, chapter 101, 1947, sections 15 and 17, and see section 12, chapter 101, and section 4 of chapter 102, which deal with changes under the Land Titles Act. Section 6 of the same Statute dealing with changes under the Partnership Registration Act.

The Surrogate Courts Amendment Act, 1947, chapter 105, dealing with contested claims and jurisdiction.

CECIL SECORD, Grantham Township
GEORGE R. INGLIS, Niagara Falls

GENERAL MANAGER AND SECRETARY

MAXIM T. GRAY, O.L.S.

SIXTY-FIRST ANNUAL REPORT

OF THE

Niagara Parks Commission

TO THE HONOURABLE RAY LAWSON, O.B.E.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The Niagara Parks Commission begs to submit for the information of the Ontario Legislature, the Sixty-First Annual Report, covering the fiscal year ending October 31, 1947.

One change occurred in the personnel of the Commission during the above period. Commissioner T. F. Forestell, K.C., was appointed Crown Attorney for the County of Welland and submitted his resignation to the Commission on November 16, 1946. This was accepted (to take effect on December 31st) after an expression of appreciation for the able services of Mr. Forestell, during his term of office. The Provincial Government appointed Mr. Carl D. Hanniwell, M.L.A., to succeed Mr. Forestell as a member of the Commission. Mr. Hanniwell was Alderman for the City of Niagara Falls during 1934, 1935 and 1936, Mayor of the City during 1937, 1938 and 1939, and has represented Niagara Falls riding in the Provincial Legislature since June, 1945.

The Commission continued under the Chairmanship of the Honourable Charles Daley, Minister of Labour for the Province of Ontario.

The fiscal year under review in this report, from the standpoint of numbers of visitors to the Park system and the use by them of Park facilities, was the busiest year in the history of Niagara Parks. Relieved of the fetters of wartime travel restrictions, visitors from both the United States and Canada visited Niagara Falls and Ontario's Niagara Parks in great numbers. No doubt, a large proportion of these consisted of a new generation of people, grown up during the war years, who were visitors to Niagara Falls and to the Province of Ontario for the first time. At practically all of the eight places of business operated directly by the Commission, revenues during this year exceeded those for the previous year, which was a record breaker. This was and is to be expected. After all, the population of the United States has increased considerably in the last ten years. Then, again, the general public is more "travel minded" than heretofore. Another point affecting travel from the United States is that schools and school organizations sponsor and direct many tours for students. Ontario, particularly the Niagara Falls area, is a tremendous magnet for travel tours of this nature. On one or two occasions, the Commission provided area and facilities for an overnight bivouac for these parties, all under careful supervision.

All of this, besides affording your Commission considerable general satisfaction, justifying in a great degree the effort put forward to maintain the Park at a high standard and to provide facilities for the comfort of visitors, also provides the Commission with substantial funds for Park maintenance and improvement. The extent of these funds, being the net revenue from the operation of our various stores, scenic attractions and restaurants, is shown in the financial statement attached hereto. It is not the major portion of the Commission's revenues, but it is considerable. Keeping pace, to some extent, with increases in revenues are increases in costs of general park maintenance, which are also reflected in the financial statement.

The Commission provided free band concerts again, this year. There were thirteen, in all. Included in these were two concerts provided by the Welland Citizens' Band, three by the Lincoln and Welland Regimental Band from St. Catharines, and two by the Canadian Legion Band from Fort Erie. The balance of the concerts were provided by the Niagara Falls Kiltie Band.

PARK GUIDES

For many years, the Commission has given permission to certain individuals to act as guides for Park visitors and to solicit patronage of that nature. It came to the attention of the Commission that this privilege was being abused, in many cases, and the Commission decided that this enterprise, while providing to an extent a public service, was too difficult to control. The Commission decided to formally suspend this particular privilege, but to allow City licensed guides to escort visitors through or about the Park, if they also obtained a license from the Commission. Consideration of this matter of guides had some influence on the Commission's decision to erect a suitable building at the foot of Clifton Hill, where Park literature and information and advice to Park visitors might be given out under dignified conditions. Mention will be made of this, later.

AGREEMENTS

An agreement was entered into between Blue Water Airways, Limited and the Commission, giving the Company permission to construct certain buildings and docks and to operate an air harbour at the Shipyards area, just south of Miller's Creek. The agreement was of a temporary nature, terminable at the end of the calendar year, 1947, at which time, the Commission can terminate the agreement if not satisfied with the operation and the Company must then remove all buildings, dock, etc., and restore the property to its original condition, at no expense whatever to the Commission.

An agreement was also entered into during the year, with the Town of Fort Erie, covering construction and maintenance of the boulevard through the Town and the removal of snow and the sanding of same, the main provisions being that the Commission will construct and maintain the roadway and sidewalks where and when necessary and the Town will remove the snow and sand where and when necessary.

The Commission had prepared an amendment to the Park regulations covering (a) the speed limit of motor vehicles through the Park and (b) the matter of permits for trucks desiring to travel over the Boulevard.

Several capital projects, some of a major and some of a minor nature, were undertaken during the year.

At Queenston Restaurant, some additional work was done on the inside to complete the work of enlarging the kitchen, consisting of the ceiling, painting and electrical wiring. The steam table was equipped with a new and larger electrical element. A new, wooden dish table was installed. An opening was made from the pantry to the dining room to facilitate service. A wire partition was installed in the basement so that stores could be locked up. A shower was installed in the men's lavatory in the basement and a new dressing room, with sanitary facilities, was installed in the basement, for the female employees. The service yard at the rear was enlarged and paved with crushed stone. A drinking fountain was installed in the Park to replace an old pump. Some re-arranging of equipment was done at the pavilion.

At Niagara Glen work was commenced on construction of an eighteen-hole golf course. A more detailed description will be found in the report of the Horticultural Department. There is an area here on the westerly side of the boulevard—between the boulevard and the Queenston power canal, bounded on the south by the Whirlpool road and on the north by the Gardeners' School property, which consists of approximately one hundred and fifty acres. It is quite rolling and has been looked on, for many years, as a logical site for a golf course. The property has been maintained in an ordinary way and your Commission decided that the additional cost of maintaining a golf course would not be exorbitant. As well, it will provide an important recreational feature and make the property accessible to the public. Stanley Thompson, well known golf architect, was retained to design the route plan and detail plans of the individual greens and tees and, having these, the intention is to do the construction work with our own forces. Time is not the essence of the matter and it is expected that two or three years will be required to complete the course.

Administration Building

Mather Arch at Fort Erie

NEW PRINCESS ELIZABETH BUILDING

Work on the construction of this building commenced on October 1st. It is located at the northerly end of Queen Victoria Park, at the foot of Clifton Hill and practically at the head of the Incline Railway, which carries passengers to the Maid-of-the-Mist steamers. Care was taken in selecting the site to insure that the building would not interfere with a clear view of both cataracts from the Oakes Garden Theatre. Also, it is of a minimum height for the same reason. The Commission has operated, for several years, a small refreshment stand in the Incline Railway building, below ground. Park information and postcards, etc. have been dispensed in a tent at this point in the Park, all under rather crude conditions. This location is definitely a focal point in Niagara Parks. Toilet facilities have been desperately needed here. In the new building, there will be public toilets in the basement, a refreshment bar and souvenirs on the main floor, and a ticket booth for the Incline Railway and Maid-of-the-Mist tickets on the main floor. The new building will also be a headquarters for the issuing of Park literature and general information for Ontario visitors in collaboration with the Department of Travel and Publicity for the Province. It is expected that the building will be completed by May 1st, 1948.

At the request of the Commission, the Maid-of-the-Mist Company installed a drinking fountain and sanitary facilities on its leased dockage area.

The Commission also extended the Incline Railway building at the top of the bank, in order to provide cover accommodation for the incline railway cars, which now must stop at a more advanced point, due to complying with certain mechanical safety devices, installed upon the recommendation of the inspectors for the Ontario Department of Labour.

At the Park Restaurant, a new high pressure steam boiler, to supply steam for the laundry, was authorized and installation is presently taking place. This installation will eliminate the necessity of operating the low pressure heating boiler during the summer months.

The area under the building housing the female help was not excavated in the original construction. This resulted in an extremely damp condition affecting the first floor so that the first floor was not usable for dwelling purposes. Again, storage space for restaurant supplies was badly needed. Your Commission authorized the excavation of this area and this rather awkward work was carried out during the 1946-47 winter season by our own forces. It is a vast improvement. The intention is to install a furnace to provide separate heat for this building, in order to finally overcome this damp condition. A new Thermo-tainer unit was purchased for the cafeteria, in order to store prepared food from the kitchen above, to handle rush hours in the operation of the cafeteria.

In connection with the Park Restaurant, your Commission is investigating plans to remodel, in a major way, the restaurant areas, both in the cafeteria, where the major volume of business is done, and in the main dining areas above. To date, no decision has been reached as to ultimate plans. One of the main considerations is the necessity of providing more adequate public toilet facilities. In the present building space is not available for this. In addition to the restaurant patrons, there are the other vast numbers to be considered, including the patrons of the picnic grounds which are hard by.

At Fort Erie the bathing beach area at the northerly end of Mather Park was improved. Construction of a stone jetty was commenced. Improvement of the area has led to an extensive increase in its use by the public, so much so that the Commission employed during the summer season, a full-time police officer to maintain security and to enforce the Park regulations. A request was received from the local authorities for a lease of the area so that the beach could be operated by the Fort Erie Kinsmen Club and policed by the Fort Erie police, but the Commission refused this.

Mention has been made in previous reports of the earth fill operations at the southerly end of Mather Park, where it adjoins Old Fort Erie Park. This work has now been completed and rough grading for the road diversions here has been done. There remains now the completion of the stone parapet wall on top of the sea wall. The intention is to complete this during the 1948 season, with our own forces. Funds used for this work, earth fill and parapet wall, will come from the Mather Legacy funds.

Pergola, Oakes Garden Theatre

Whirlpool Rapids and Lower Arch Bridge

The property at the junction of the Dominion Boulevard and the Boulevard, directly across from Old Fort Erie, consisting of approximately two acres, was graded and seeded. This was also done with the three-acre parcel at the junction of Garrison Road and the Boulevard so that these two properties are now in shape to be properly maintained.

The custodian's dwelling over the pavilion at Old Fort Erie was altered to provide two small bedrooms, instead of just one. This work as of the end of this fiscal year, is proceeding.

At the greenhouses, the mower repair building was moved from its old location at the old greenhouses to the rear of the new greenhouses and a new garage and implement shed constructed adjoining, so that all of the mowing equipment and the horticultural department vehicles may be stored here and the equipment maintenance carried out here.

General maintenance work throughout the Park system was carried out; here again, some of the work was of a major and some ordinary maintenance. In Fort Erie, the boulevard roadway was resurfaced with two inches of sheet asphalt between Lewis Street and Gilmore Road. Surface treatment was carried out for approximately six miles at various points between Chippawa and Fort Erie, so that this entire stretch is now in good condition. Shore erosion protection involving the placing of approximately 7,000 tons of rubble was carried out between Fort Erie and Black Creek. To complete this work there remains now the area between Black Creek and Usher's Creek. Between Chippawa and Queen Victoria Park is the location where the large steel tower was constructed during the war in order to construct the submerged rock weir in the river. The Commission decided to leave the detour road at this point as it became very popular with the public as a vantage point from which to view the upper rapids. With this in mind, the original roadway was renewed and the detour roadway becomes a parking area. The resultant "island" between the two has been graded and the whole cleaned up and seeded, etc. Funds for this restoration were provided by the Hydro-Electric Power Commission.

Your Commission became concerned over the damage to foliage and trees throughout the Parkway, particularly in the Niagara Glen area and Paradise Grove area, and requested a thorough investigation and report from the Division of Botany and Plant Pathology of the Department of Agriculture at Ottawa. This was done, and the report received, the same stating that evidence shows considerable damage results from fumes and toxic gases from the plant of the North American Cyanamid Company. Other damage, particularly to the Oaks, is caused by a fungus disease which can be controlled by spraying.

STAFF

On January 24th, Mr. J. W. Archer, Chief Accountant, passed away, at the age of sixty-five. Mr. G. L. Anderson, a member of the accounting staff for many years, was appointed to replace him. Mr. Anderson is also purchasing agent for the Commission. Miss B. C. Martin, who was bookkeeper for the Commission, was appointed supervisor of the service department, work formerly done by Mr. Archer. Under the service department are co-ordinated the operations of the various stores, restaurants and scenic attractions which are directly operated by the Commission. All purchases of merchandise for sale—souvenirs, china and other items—will be approved by Miss Martin. As mentioned before, the work of the service department has increased through the years to a considerable extent, as can be seen from the annual financial statements.

Mr. James B. Liddell was engaged on a temporary basis as assistant to Mr. J. Oakes, who is superintendent of the horticultural department.

Wages of the staff in different categories were reviewed, in May of this year, and adjustments made.

The Chairman and the General Manager attended the Convention of the American Institute of Park Executives at San Francisco, California.

Early in the year, arrangements were made by the Honourable Charles Daley with the Netherlands' Ambassador to Canada, for the shipment to the Commission of a large quantity of rhododendrons, azaleas and other shrubs. This gift, under

Old Fort Erie Restored

Dufferin Islands

the title, "Flowers interpret Netherlands' Gratitude," was in turn, gratefully received. Several carloads were involved and the shrubs were planted in the area around the new greenhouses. Acceptance of this gift was made by Mr. Daley on behalf of the Canadian people, with an appropriate ceremony to which the public were invited and which took place on June 4th, at the new greenhouses.

Dr. J. H. van Roijen, Netherlands' Ambassador to Canada, made the presentation on behalf of the Dutch Government.

A description was given in previous reports of the construction of the new Park greenhouses, but it should be mentioned here that these were formally opened at a ceremony held at the greenhouses on November 9th, 1946.

Again, in October, 1947, a shipment of 30,000 tulip and daffodil bulbs were received from the Netherlands as a gift from the Netherlands' Government and have been planted in various locations throughout the Park system. More detailed description of these horticultural species will be found in the report of the horticultural department.

For the first time since prior to World War II, your Commission placed a flower exhibit, chiefly "Mums", at the Royal Winter Fair at Toronto.

The report from the horticultural department, which is under the supervision of John Oakes, follows:

Snow clearing, the removal of dead trees and branches, combined with maintenance, constitutes the work of the horticultural staff during the winter. A considerable amount of work was done during this period, clearing the rank undergrowth and dead wood from the woodlot south of the Queenston Power Plant and further clearance was undertaken at the Oak Grove, Niagara-on-the-Lake. This completes the clearing and grading of the grounds adjacent to the boulevard from Queenston Village to Niagara-on-the-Lake.

A severe sleet and ice storm visited the area on January 1st, causing considerable damage to the trees, particularly from Queen Victoria Park to Fort Erie. The clearing of the broken branches was commenced immediately, and much of the work had been completed before the heavy snows of late January and February suspended operations. The remainder of the work was carried out as soon as possible in the spring, and, before grass cutting commenced, the Boulevard had assumed much of its normal character.

A considerable amount of tree spraying was done during the summer months, commencing at the Oak Grove, Niagara-on-the-Lake, through to Queenston Village, using Bordeaux mixture. A small infestation of the Dutch Elm disease was noticed adjacent to the Jackson property, immediate steps were taken to control this outbreak, the trees being sprayed thoroughly. The affected trees will be kept under observation and further treatment applied as necessary.

The vegetation along the west side of the Boulevard in the vicinity of the Whirlpool is being seriously affected by the fumes and dust emanating from the Canadian Cyanamid plant. Trees and shrubs are being defoliated and killed in increasing numbers. The main reason for the high mortality in this area is due to the prevailing westerly winds driving the fumes in this direction, few days in the year being free from deposits of this nature.

Spring work was considerably delayed by the excessive rainfall, grass cutting equipment was bogged down and it was late in the season before the spring work and maintenance was brought under control. It was during this period that the National Committee of the Nurserymen of Holland presented the Parks Commission with approximately 6000 flowering and decorative shrubs, comprising Rhododendrons, Azaleas, Magnolias, Lilacs and conifers in many varieties. The consignment arrived on May 15th, in three box cars, and consisted of 120 cases.

Preparation of the ground in the vicinity of the Greenhouse was held up by constant rains, and it was with difficulty that planting could be completed in time to reap the benefit of the Rhododendron and Azalea flowers, which were well advanced.

River Path, Niagara Glen

Part of New Table Rock Tunnel Beneath Horseshoe Falls

A formal design was laid out immediately in front of the Greenhouse, using Rhododendrons, Azaleas and evergreens. The approaches were planted with an avenue of Magnolias and on the west side a mass planting of Azaleas was constructed with a background of evergreens for the formal pond.

Before accepting this gift, it was brought to the notice of our Dutch friends that the climate and soil conditions in this area are not ideal for the successful cultivation of Rhododendrons and Azaleas, and that a fair number of deaths must be expected the first season, and a gradual deterioration of the remainder. The planting plan was therefore arranged so that replacements of a suitable nature could be made without impairing the general layout.

The weather conditions, while they caused considerable delay, had their compensations. The resulting dull and damp weather proved ideal for the shrubs after their long journey in packing cases, so late in the year. The Azaleas and Rhododendrons gave a splendid display of colour when the formal presentation was made.

The plantings have been given a measure of protection for the winter, and with a fair amount of snow coverage, there is every indication of a good display in the spring of 1948.

A considerable amount of construction work was also carried out, some 200 maples being planted on the Golf course at Niagara-on-the-Lake, the new service entrance to the Park Restaurant was suitably designed with rock work and a field stone wall, planted to blend with the building and the grounds. The site of the hydro construction tower, between Dufferin Islands and Chippawa, was graded in preparation for spring seeding in 1948. The river bank in the Town of Fort Erie was given a much needed clearance of underbrush and a considerable quantity of debris removed, the result being much appreciated by the local inhabitants. The parcel of land at the intersection of Lakeshore Road and Albany Street, opposite the Peace Bridge, Fort Erie, was graded and seeded. Undergrowth and rubbish was cleared from the land adjoining the entrance to the Hydro canal at Chippawa, preparatory to the construction of a picnic ground in this area. The site of the proposed Princess Elizabeth Building was cleared of trees and shrubs in preparation for the construction work which is now in progress.

Spring and fall planting of the flower beds was carried out as in previous years, with the material propagated in the greenhouses.

This year, however, the fall planting has been greatly increased by the gift of bulbs, donated by the Dutch Bulb Growers' Association. This magnificent gesture was made up of some 30,000 bulbs, tulips predominating with narcissus also in quantity. With the addition of 12,000 bulbs purchased by the Park Commission, a brilliant display should be evident throughout the system in the spring of 1948.

Work was commenced in the fall on the construction of a golf course at Niagara Glen, in conformity with the plans and advice of Mr. Stanley Thompson, golf course architect. During the summer months the grass had been cut over the whole area and revealed a fair measure of turf over most fairways, which with the minimum of labour can be placed in playing condition. To date, satisfactory progress has been made in clearing the trees and underbrush from the fairways, and the sites of the proposed tees and greens. Materials for the raising of the tees and greens was obtained from the roadbed of the roadway used by the military on the Hydro canal during the war years. Number (1) tee and green has been raised and is ready for moulding and surfacing. Number (2) tee is raised and ready for top soil and the fairway cleared and stumped, the green which is in a depression is being raised by Cyanamid refuse, preparatory to being top dressed. Several thousand cubic yards are required to bring this to a suitable level. Number (3) tee is stumped and ready for grading, the fairway required considerable work, situated as it is on a rock pile, but is now graded ready for top dressing. The green is rough graded. Number (4) tee is raised and top dressed, the fairway clear, but as it comprises of a great deal of the old road, will need some additional work in the spring, the green is raised and ready for top dressing. Number (5) tee, a double tee, is raised and ready for top dressing, the fairway clear and the green which is sited on the side of the mound, has been rough graded. An 8" tile drain was placed under this green to take off the excessive water from the Hydro property. Number (6) tee on the mound has been graded. Number (7) green has been raised and is ready for top

dressing. Number (8) tee is in a similar state and the green ploughed and ready for completion. Number (11) tee is ploughed and ready for grading and seeding, the green (an armchair) is cut out from the mound and graded to the fairway. Number (12) green has been ploughed. Number (15) green cut out from the mound. Number (16) tee rough graded, fairway ploughed and the green cleared and stumped from the bush. Number (17) tee and part of the fairway has been stumped, cleared and ploughed.

The greens, tees and fairways not mentioned herein, are still awaiting attention, but with the exception of Number (14) fairway, all are clear of obstruction and ready for discing, rolling and seeding in the spring of 1948.

Following the official opening of the new greenhouses on November 9, 1946, when so many people were present, there has been a steady flow of visitors from all parts, more so on Sundays when the houses have been crowded. After the Chrysanthemum show, there followed a succession of floral displays, comprising Schizanthus, Cinerarias, Cyclamen, Bulbs, Begonias and a brilliant show of Calceolarias. In late summer the centre house was furnished with a display of coloured foliaged Caladiums, Ferns, Palms and exotics providing an interesting exhibit in the front wing houses at all times.

The labour involved in propagating and growing bedding plants has been reduced to a minimum and the results exceeded our expectations. All equipment is in a satisfactory condition, and with the addition of the new garage and machine shop, in the rear of the greenhouses, it will now be possible to centralize the activities of the horticultural department.

Equipment was extremely difficult to procure in the early part of the season and spares practically unobtainable, this refers particularly to grass cutting machinery. Later, however, it was possible to purchase a Toro Professional power mower for Mather Park and Fort Erie, a Toro 30" Parks Special for Queen Victoria Park, and a small Bob-o-Lawn for Lundy's Lane Cemetery. In the fall a five gang Toro mower and Worthington tractor were purchased for the golf course, a three gang Worthington mower and Ford tractor for Fort George and vicinity, and a Worthington three gang mower for Queenston Heights. This latter will be hitched to the McCormick-Deering tractor and will take care of both Queenston Heights and the school area.

The School for Apprentice Gardeners continues to fulfill its purpose. At the end of October, 1946, twenty-four students were in residence, of this number four left before the completion of their course. Fifteen of the remainder graduated in June, 1947, eleven of whom are gainfully employed in horticultural work. A further eleven students were admitted, bringing the total number in residence to fifteen, with one additional student taking post graduate work in the Parks greenhouses.

During the year under review, there has been a noticeable improvement in the work and interest of the students, and it is hoped that this standard will be maintained. This industry is not confined to the purely theoretical side, but is displayed in the interest taken in the practical work of the Parks and the greenhouse in particular.

The winter and summer schedules of instruction have been adhered to as closely as possible. Instruction both theoretical and practical has been given in vegetable growing, tree and shrub planting, grading and lawn making, drainage, greenhouse work, and the propagation of hardy trees and shrubs, as well as the normal subjects in the curriculum.

An active interest in sport was fostered and a keen and competitive interest was shown by the student body. The camera club had an added stimulus with the completion and equipping of a dark room. Instructional visits were arranged during the season, four members of the staff visiting the School of Horticulture, Farmingdale, Long Island. Their report indicated a worthwhile visit, where many interesting comparisons were made. Some students visited the lilac display at Rochester, New York, and all students the Canadian National Exhibition.

Outside work was greatly hindered by adverse weather conditions, particularly the growing of early vegetables, however, later crops showed very satisfactory results. Egg production and the raising of poultry for the table has proved a very profitable sideline at the school. Some 22,000 eggs were collected and 88 roosters and 100 hens graced the table. Six pigs were purchased and fattened on kitchen leavings, showing a profit on the investment.

Many improvements have been added to the school, making living conditions extremely comfortable. A tribute here to the dietician and her capable assistant would not be out of place.

Every effort is being made to maintain the present high level of the school and the curriculum is under constant revision. It is hoped by these efforts to raise the standard annually and to set the school in the position it should hold in the horticultural world.

PARK HISTORY

Early in the fiscal year, your Commission received from the printers the two thousand copies of the Park history. Consisting of twelve chapters with appendices, this 338-page volume sets forth the activities of your Commission from the time of the first establishment of the original Commission in 1885. The book has since been widely distributed gratuitously to schools, libraries and public institutions, not only in Canada, but in the United States, England and in many foreign countries. Reprinting of the Foreword in the book, by the Chairman, would seem appropriate:

"Just sixty years ago, the foresight of Ontario's Government gave birth to the Niagara Parks. Located in the famous Niagara Peninsula of the Province of Ontario, they border the Canadian bank of the Niagara River for its full length from Lake Erie to Lake Ontario. Thirty-five miles of magnificent parklands include internationally famed gardens, rare floral displays, ancient fortifications, old battlefields and historic sites of interest and significance to the whole world. Sentiment and history are here combined with the handiwork of nature and man at their best. The places for viewing the full majesty of the Niagara Falls and the virile grandeur of the Niagara River, above and below the mighty cataracts, are preserved in a state of natural beauty for the pleasure and advantage of countless visitors from every part of Canada, the United States and the world. The following pages tell the story of Ontario's Niagara Parks, the struggle for their genesis, the romance of their growth and the achievement they represent.

I am indebted to the author, Ronald Way, M.A., for the untiring effort that has gone into the preparation of this volume.

CHARLEY DALEY,
Chairman,
The Niagara Parks Commission."

PROPERTIES

There were no new purchases of property made during the year, but the Commission agreed to lease the Niagara Camp area from the Department of Mines and Resources at Ottawa. This property consists of 200 acres, closely, being the original camp grounds from which the buildings are now being removed. The lease is not yet prepared and therefore not finally closed. The property directly adjoins the Fort George Reservation and also adjoins, on the east, other lands already leased from the Federal Government.

The following grants were made during the year:

Niagara Falls Collegiate Vocational Institute—Scholarships of \$15.00
and \$10.00 to Donald Dimond and John Carr, respectively.

Niagara Falls Illumination Board	\$3,250.00
Women's Wentworth Historical Society.....	800.00
Greater Niagara Chamber of Commerce	300.00
Niagara Falls General Hospital	200.00
Greater Fort Erie Chamber of Commerce	100.00

The Commission entertained the following visitors:

Czechoslovakian Ambassador, His Excellency Frantisek Nemecek and party.

President Truman.

Party of school boys from South Carolina.

NIAGARA FALLS BRIDGE COMMISSION

During this fiscal year a reorganization took place in connection with the membership of this Commission. The following new members were appointed to the Commission by the Ontario Government:

Hon. Roland Michener

Hon. Charles Daley

Thomas H. Lewis, M.L.A.

Carl D. Hanniwell, M.L.A.

No conclusion has been reached, yet, with regard to the transfer to The Niagara Parks Commission of the "L" shaped property adjoining the bridge by the Department of Highways.

NIAGARA SPANISH AEROCAR COMPANY, LIMITED

On September 19, 1946, the death occurred of Mr. James Schiller, Manager of this Company. The Commission authorized its solicitor to investigate and report on what might be the resultant corporate position of this company and an examination is now being made of the company's books and accounts, in accordance with the terms of the existing agreement, in order to establish the revenue, up-to-date, which your Commission might expect to receive over and above the minimum rental, all in accordance with the terms of the said agreement.

All of which is respectfully submitted to Your Honour by:

THE NIAGARA PARKS COMMISSION,

Hon. Charles Daley, Chairman,

Fred M. Cairns, Vice-Chairman,

Wm. B. Rollason,

Harold G. Fox, K.C., Ph.D.,

T. H. Lewis, M.L.A.,

Carl D. Hanniwell, M.L.A.,

Cecil Secord,

George R. Inglis.

REPORT

OF THE

Minister of Public Works

FOR THE

Province of Ontario

FOR THE

Twelve Months Ending March 31st, 1947

Printed by Order of
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 8 — 1946

ONTARIO

TORONTO

Printed and Published by Baptist Johnston, Printer to the King's Most Excellent Majesty 1946

TO:

The Honourable Ray Lawson, O.B.E., LL.D.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

As required by law, I submit for the information of Your Honour and the Legislative Assembly, the Annual Report of the works under the control of the Public Works Department, comprising the reports of the Deputy Minister, Chief Architect, Engineer, Secretary and Accountant for the twelve months ending the 31st of March, 1947.

Respectfully submitted,

GEO. H. DOUCETT,
Minister of Public Works.

Department of Public Works, Ontario.
Toronto, March 15, 1948.

R E P O R T

OF THE

Deputy Minister of Public Works

THE HONOURABLE GEORGE H. DOUCETT, M.P.P.,
Minister of Public Works,
Parliament Buildings,
Toronto, Ontario.

Sir:

I have the honour to submit to you the accompanying reports of the Chief Architect, Engineer, Secretary and Accountant for the financial year, April 1, 1946, to March 31, 1947.

These reports indicate increasing activities in the commencement of new projects and the preparation for an expanding programme of construction, to provide facilities for the various departments to adequately serve the people of Ontario.

CHIEF ARCHITECT'S BRANCH

The construction of new mental hospitals, postponed during the war years, has been resumed and a new site selected in the Township of Montague. A contract has been awarded to Messrs. Anglin-Norcross, Ontario, Limited, and work is in progress for the erection of the first section of this Ontario Hospital School. This new Institution, when fully completed in accordance with present plans, will accommodate 1200 patients; these buildings now under way will have a capacity of 900 beds.

The work undertaken by this Branch has covered a multitude of varying jobs, but the transition from a wartime economy to peacetime, has brought many problems and the actual amount of work brought to completion has been limited by the available manpower and material shortages.

A considerable quantity of construction equipment and supplies was purchased from the Department of Mines and shipped from the Lignite Plant at Onakawana to the Stores Building at 1200 Sheppard Avenue and will be used as required on new construction projects.

While this report gives in detail the regular work carried out by this Branch, it should also be noted that a considerable amount of technical service has been rendered to assist other departments of the Government in administering Acts under their control.

ENGINEER'S BRANCH

The usual repair and maintenance of locks and dams has been carried out where necessary and the following new dams were constructed:

Naiscoot River Dam — Parry Sound District

Dollars Dam (South) — Parry Sound District

Municipal drainage work was carried out in the Northern Districts and financial assistance was given for drainage works to the Town of Capreol, Township of Duro, Township of Matchedash, Township of Orillia and Township of Sunnidale.

Under the Provincial Aid to Drainage Act, (Chapter 70, R.S.O., 1937) eight Townships were given financial assistance towards the cost of nine drainage schemes.

Grants were made to the City of Sudbury towards the cost of a flood control and drainage scheme, known as the Nolin's and Junction Creek Drainage Works and aid was given to the Grand River Conservation Commission to carry out preliminary work in connection with the proposed construction of the Conestoga Dam and the Township of Harwick was given a grant towards the cost of the Shrewsbury Dock.

SECRETARY AND ACCOUNTANT'S BRANCH

The statement of revenue shows an increase over the normal receipts which is occasioned by the sale of the following properties:

Town of Leaside

Sale of garage building. Sale price, \$75,000.00 less portion transferred to Department of Highways, \$14,610.00\$ 60,390.00

Toronto

Sale of land, Peter and Wellington Streets 3,200.00

Gravenhurst

Sale of Lot 23, North side of David Street, East side of Muskoka Road 150.00

Public Buildings, etc 1,419,087.19

Total Expenditure \$ 2,588,379.98

I have the honour to be, Sir,

Your Obedient servant,

GEORGE N. WILLIAMS,

Deputy Minister of Public Works and Chief Architect.

TORONTO, March 15, 1948.

REPORT OF THE CHIEF ARCHITECT

The Honourable Geo. H. Doucett, M.P.P.,
Minister of Public Works.

Sir:

I have the honour to report on the work done by the Architect's Branch of the Department of Public Works, Ontario, during the fiscal year, April 1st, 1946, to March 31st, 1947, as follows:

ONTARIO GOVERNMENT INSTITUTIONS LOANED
To
THE DEPARTMENT OF NATIONAL DEFENCE, CANADA

During this fiscal year the following Ontario Government Institutions, which were previously turned over, all or in part, to the use of the Department of National Defence for purposes of World War II, are still being retained for this purpose:

Ontario Hospital, London (portion of lands only)
Industrial Farm, Monteith
Normal School, Ottawa.

The following Institutions have been returned by the Department of National Defence to the Province following termination of lease arrangements:

Returned during this fiscal year:

Ontario Hospital, St. Thomas, as of May 31st, 1946
Boys' Training School, Bowmanville, as of June 13th, 1946
Ontario Hospital, Brampton, as of August 10th, 1946.

Returned previous to this fiscal year:

Ontario Hospital, Port Arthur (Administrative Bldg.) as of
February 15th, 1944
Ontario Reformatory, Mimico, as of May 1st, 1944
Agricultural School, Kemptville, as of May 1st, 1944
Normal School, Toronto, as of July 12th, 1944
Ontario School for Deaf, Belleville, as of July 15th, 1944
Training School for Technical Teachers, Hamilton, as of
September 1st, 1944
Ontario Agricultural College, Guelph, as of February 19th, 1945
Girls' Training School, Galt, as of April 20th, 1945.

Further remarks regarding the return and reconversion of these Institutions will be found in the body of this report under their respective sub-divisions.

A considerable amount of work was rendered by this Branch of the Department, in connection with the continued use of the enumerated Institutions still on loan to the Department of National Defence, as well as in connection with the above Institutions referred to as being returned to the use of the Province during this fiscal year.

Construction work carried on by this Department during this fiscal year, was adversely affected by continual shortages of skilled labour, essential construction materials and equipment and many projects were of necessity, deferred awaiting more favourable condition in the construction industry.

Persistent efforts to obtain additional skilled technicians met with little success and as a result this very important phase of our work was greatly hampered.

LEGISLATIVE AND DEPARTMENTAL BUILDINGS

Working drawings for the initial stages of remodelling the East Wing of the Parliament Buildings were further developed and preliminary arrangements to start the work were made. This work included plans for a new fire tower stairway at the north end of the east wing, new fire tower stairs and elevator shafts at the east entrance and at the grand stair case and plans for remodelling lavatories in this wing.

In this group of buildings, general routine repairs, replacements and changes were carried out in all trade branches but this work also was restricted by material and labour shortages referred to above.

Work in this category included general maintenance and repairs of roofs, plasterwork, masonry, windows, doors and other interior woodwork. A considerable amount of interior painting was done and storage shelves were built in offices and vaults as necessary.

General repairs and replacements were also carried out in connection with furniture, furniture upholstery, linoleum, blinds and other such equipment and finishes.

The mechanical systems and services throughout these buildings were kept in repair and general improvements were made, as required, in connection with plumbing, heating, ventilation, refrigeration and electrical systems and the elevators were regularly inspected.

The work of improving the electric lighting systems, started in the previous year, was continued and expanded during this fiscal year.

Numerous sectional partitions were installed in various offices throughout the Parliament Buildings and East Block to divide existing offices.

Included in the general work, as above described, the following items were considered of sufficient interest to warrant mention, for purposes of record, in this report:

Parliament Buildings:

Improvements were made in the Legislative Chamber including rearrangement of platforms and seating layouts in the Speaker's Gallery and the galleries immediately below to provide more comfortable arrangements. The front railings of the Public Galleries were increased in height by addition of a safety rail.

Extensive repairs were made to the copper finials and ridges of the roof over the Chamber.

Alterations were made in a group of offices at the main entrance to provide suitable office accommodation for the Honourable the Provincial Secretary.

A dark room was installed for the Photographic Division of the Department of Travel and Publicity.

The names of the members of the 20th and 21st Legislatures were inscribed in the marble panels located on the ground floor of the North Wing.

East Block:

The work of repointing the exterior stonework of this building was continued throughout this fiscal year, but progress was again limited by shortage of skilled labour.

Acoustical ceilings were applied in some offices where large groups of business machines were in operation and the noise level impaired the efficiency of the operators.

In addition to the routine maintenance and repair of office cabinetwork and other equipment, numerous items of special equipment were manufactured in the Department's workshops in the East Block, including special electrical installations for incubators, water baths and other laboratory equipment for the Department of Health. Packaging and crating of equipment and furniture, as required by various Departments for shipment to outside points, contributed a large volume of work to the carpenter shop.

The central boiler plant, located in the East Block, provides steam for heating and other special purposes to the Psychiatric Hospital and the Banting Institute as well as the Parliament Buildings and East Block and numerous smaller buildings in the vicinity. The plant was maintained and kept in repair for this important work.

Subsidiary Buildings:

General maintenance work and repairs in various trade branches were carried out in the following buildings:

Numbers 11, 13, 15 and 39 Queen's Park
112 College Street
454 University Avenue (Liquor Control Board)
307 Richmond Street, West (Sewage Laboratory)
Department of Highways' Garages, Surrey Place and Leaside
Department of Health, Serology Laboratory Annex, Mimico
Department of Health, Office Annex, 1011 Queen Street, West
1200 Sheppard Avenue.

The following items are listed for purposes of record:

At No. 13 Queen's Park, alterations were made to provide quarters for the headquarters staff of the Ontario Provincial Police.

At 112 College Street, alterations were carried out to equip this building for use as an Outpatient Clinic to be operated in conjunction with the Psychiatric Hospital and to relieve the crowded conditions of the Clinic in the hospital building. The Farm Service Force Branch of the Department of Agriculture, formerly housed in this building, were removed to leased premises at 9 Richmond Street, East, Toronto, and the premises there were fitted out for this purpose.

At 178 Queen's Quay, two buildings of fire resisting construction, which formed part of the R.C.A.F. Equipment Depot at this point, were purchased and extensive alterations carried out to fit one building for use as a central repair garage for Ontario Provincial Police cars. Facilities provided include workshops and equipment for mechanical repairs, upholstery, spray painting, parts stores and offices. The second building was altered to provide dead storage for cars and parts. As these buildings were formerly heated from the R.C.A.F. central heating plant it was also necessary to install a new boiler plant in the main garage building together with washrooms and other service rooms for staff.

At 454 University Avenue, improvements were made to the electric lighting system in some offices, repairs and replacements were made to the plumbing and heating systems and the elevator was inspected and kept in repair.

At 1200 Sheppard Avenue, a group of buildings owned by the Dominion and formerly a part of the Dehavilland Aircraft Plant, were purchased and extensive alterations carried out to provide much needed additional space in this district for offices, draughting rooms, laboratories and stores all as required by various Departments to relieve the overcrowded conditions in the East Block and to take care of their expanding requirements.

At 455 Spadina Avenue, new sectional partitions were installed, the electric lighting improved and the rooms painted to fit these leased premises for use by the Venereal Diseases Division of the Department of Health.

At 501 Wellington Street, West, partitions were erected to form two offices for the Department of Lands and Forests in these leased premises.

Osgoode Hall:

General routine repairs, replacements and minor changes were carried out at these premises. The following items are mentioned for purposes of record:

The old, unused, kitchen and pantry on the second floor were cleaned out and alterations made to provide two additional offices for Judge's Chambers.

Repairs were made to mosaic tile floors in the main halls and some rotted timbers were removed and replaced with steel supports.

The plumbing, heating and electrical systems were repaired and improved and the elevator was inspected and kept in repair.

EDUCATIONAL BUILDINGS

Normal and Model School, Toronto:

These premises were continued in use as a Rehabilitation Centre by the Department of Education under a Dominion-Provincial Training Programme.

Routine maintenance of these buildings was generally done by the School as part of the Vocational Training Programme but this Department arranged a contract and work was started on major repairs and replacements of roofing and sheet metal work over all buildings.

The former Earl Kitchener School on Pape Avenue, Toronto, leased from the City of Toronto during the war years as temporary quarters for Normal School work, was purchased during this fiscal year. General routine repairs were carried out including repairs and replacements of mechanical systems. The interior of the school, generally, was redecorated and the floors of the auditorium and ante rooms were sanded and refinished.

Normal and Model School, Ottawa:

These premises are still on loan to the Dominion Government and, as noted in my previous annual report, were loaned as of November 1st, 1939.

The Normal School classes are being carried on in temporary quarters located in the Mutchmor School, Ottawa.

Normal School, London:

Minor routine repairs were made to this building and to the master clock system and minor stoker replacements were made.

Normal School, Hamilton:

Minor repairs, as required, were made to this building; repairs were made to the programme clock system and the temperature controls were overhauled.

A new condensate return pump was installed on the heating system and minor repairs were made to the boiler.

Considerable damage was caused to the roof by a wind storm: this was repaired.

Normal School, North Bay

Routine repairs were carried out, the interior walls and ceilings were washed down and the auditorium seating was rearranged.

Fire brick lining of number 2 boiler was renewed, the room temperature control system was overhauled.

The electric lighting system was improved in some classrooms.

Normal School, Peterborough:

Routine repairs carried out at this school included the retubing of No. 2 boiler.

A new condensate pump was installed and improvements made to the heating system, generally.

Normal School, Stratford:

Routine repairs only were carried out at this School.

Ontario School for Deaf, Belleville:

General routine repairs and replacements were carried out including new shades for 124 windows and repairs to plaster in classrooms and Superintendent's Residence.

General repairs and replacements in connection with mechanical systems included, complete retubing of No. 1 and 2 boilers, rebuilding of front wall of No. 4 boiler, overhaul of boiler feed pump and installation of a new coal hoist. A new hot water convertor was installed in the Superintendent's Residence.

Ontario School for Blind, Brantford:

In addition to the normal routine repairs to buildings and mechanical systems at this Institution the following work was also carried out:

New roofs were laid over the gymnasium building and connecting passageways.

The brick and stone gable over the south entrance to the Main Building was taken down and rebuilt.

A new incinerator was erected at the base of the boiler plant chimney.

A new domestic hot water tank and heating element was installed in Main Building.

Two steam driven vacuum pumps were completely overhauled.

Provincial Institute of Textiles, Hamilton:

The former Ontario Technical Teachers' Training College at this location was converted during this year to provide facilities for the new Provincial Institute of Textiles under the control of the Department of Education. Routine repairs were carried out as usual.

Provincial Institute of Mining, Haileybury:

General Routine repairs were carried out in this building.

AGRICULTURAL BUILDINGS

Ontario Agricultural College, Guelph:

The work of restoring, to their former condition, the buildings and grounds, loaned during the war to the Department of National Defense, was carried forward during this fiscal year. This work as noted in my previous annual report was done under agreement with the Dominion Government whereby the cost of such restoration work was reimbursed to the Province.

The work started at this College in the previous year, to provide accommodation, of a temporary nature, for the greatly increased student enrolment was continued during this fiscal year but progress again was limited by the general shortage of labour and materials.

Work under this heading, started in the previous year and now completed or substantially completed included:

Conversion of former R.C.A.F. outstation building, to provide new accommodation for Bacteriological Department.

The large addition to the Chemistry Building.

The large addition to the Soils Building.

The addition to the Biology Building.

Alterations to Mills Hall to provide additional living quarters for students.

Alterations to Horticultural Building, top floor, also for students' quarters.

Work was also started and substantially completed, during this fiscal year on:

A new Animal Husbandry Pavilion.

Alterations to second floor of existing Animal Husbandry Building to provide accommodation for Economics Department.

Alterations to old Power House Coal Storage Building to provide additional storage areas for vegetables.

A start was also made during this fiscal year on the following projects not previously mentioned:

Alterations to old Farm Mechanics Buildings to provide more suitable accommodation for the Agricultural Engineering Department.

Alterations to old Storage Building to provide workshops for plumbers, steam-fitters, painters and storage for their materials, also to provide accommodation for the Exhibits Department and general storage.

Contracts were awarded for the supply and installation of a large new steam generating unit, extensions to the overhead coal hopper, extension of the boiler house chimney and other improvements and extensions required in connection with the increased demand for steam.

In addition to the foregoing items of restoration work, alterations and extensions, this Department also carried out general maintenance and repair and replacement work in all branches of construction on the various buildings of the College, beyond the scope of the staff maintenance mechanics at the College.

Ontario Veterinary College, Guelph:

Construction of the large permanent addition and extensive alterations to the Main College Building, started in the last fiscal year, have been continued, but the work has been hampered by the prevailing shortages of labour and essential materials.

Work also was continued on the new Hog Clinic, the new Fox and Mink Building and the new Laboratories for poultry and small animals, all of which are now nearly completed.

A former army hut was dismantled at Brampton and will be re-erected at this College to provide temporary classroom accommodation.

A new residence for the Principal of the College was planned and the work started.

In addition to the foregoing, routine repairs were made to the existing buildings.

Agricultural School, Kemptville:

The restoration work, following return of this School to the Province from the Dominion Government, started in the previous year, was completed this year.

To provide much needed additional temporary accommodation at this School, 10 wooden buildings at Kingston were purchased from the War Assets Corporation, removed to Kemptville and re-erected complete with plumbing, heating and electrical systems.

Routine repairs were made to the permanent buildings including repairs to roofs of several buildings and repairs and replacements to mechanical systems as required.

Experimental Farm, Ridgetown:

Routine repairs were made as required.

Demonstration Farm, Hearst:

Routine repairs were made as required.

Horticultural Experimental Station, Vineland:

Extensive repairs and replacements were carried out at this Institution including:

New shingle roofs on three staff cottages.

New stucco finish on two staff cottages.

Glass was removed from East and West range greenhouses, general repairs made, the glass replaced and the whole painted.

The exteriors of the main barn, ice house and cold storage warehouse and elevated water storage tank were painted.

Three hundred tons of large stone boulders were placed along the lakeshore to resist further erosion.

Nos. 1 and 2 boilers were retubed and general repairs made to mechanical system.

Demonstration Farm, New Liskeard:

Routine repairs were made, as required.

Fruit Inspection Building, Winona:

Plans were prepared, contracts awarded and a building erected for fruit inspection purposes on the Queen Elizabeth Way.

Rural Youth Training Centre, Cayuga:

Alterations were made to an existing building to provide temporary facilities for training purposes.

DISTRICT BUILDINGS

Algoma:

Court House, Sault St. Marie: Routine repairs were made.

Gaol, Sault Ste. Marie: Routine repairs were made.

Cochrane:

Court House, Cochrane: Routine repairs were carried out.

Lock-up, Hearst: Minor repairs were carried out.

Lock-up and Office Building, Matheson: Routine repairs were made.

Kenora:

At Kenora, a parcel of land adjoining the Court House property was purchased as a site for a proposed new office building.

Court House, Kenora: Routine repairs were carried out.

Gaol, Kenora: Routine repairs were made.

Gaoler's Residence, Kenora: Routine repairs were made.

Government Office Building and Lock-up, Sioux Lookout: Routine repairs were made.

Manitoulin:

Court House and Registry Office, Gore Bay: Routine repairs were made.

Lock-up, Gore Bay: Routine repairs were made.

Muskoka:

Court House, Bracebridge: Routine repairs made at this place included slate roof repairs and a new set of grates for the heating boiler.

Gaol, Bracebridge: Routine repairs were made.

Registry Office, Bracebridge: Routine repairs were made and a new wood counter installed.

Nipissing:

Court House, North Bay: Routine repairs were made, a new railing was installed in the library of the Judge's Chambers and a new hot water boiler was installed.

Registry Office, North Bay: Routine repairs were made.

Gaol, North Bay: Routine repairs were made, paint was furnished for application by prisoners, a safety screen purchased last year was installed in the visiting room and a cooking range brought from the Boys' Training School, Galt, was installed.

Parry Sound:

Court House, Parry Sound: Routine repairs were made, new lighting fixtures were installed in the Sheriff's Office and Provincial Police Office, and a basin installed in the Crown Attorney's Office.

Registry Office, Parry Sound: Routine repairs were made and new lighting fixtures installed.

Gaol, Parry Sound: Routine repairs were made, paint supplied for application by prisoners and new window shades installed.

Lock-up, Burk's Falls: Routine repairs were made.

Rainy River:

Court House, Fort Francis: Routine repairs were made, a new cooking range was supplied for caretaker's apartment, shelving was installed in library, and extensive repairs made to heating system including retubing of No. 2 boiler.

Registry Office, Fort Francis: Routine repairs were made.

Gaol, Fort Francis: Routine repairs were made.

Lock-up, Fort Francis: Routine repairs were made and office spaces painted.

Provincial Police Quarters, Red Lake: A heating stove and some furniture were purchased for the temporary quarters at this location.

Lock-up and Constable's Residence, Atikokan: Routine repairs were made.

Sudbury:

Court House, Sudbury: Routine repairs were made, new lighting fixtures were installed in the Court Room and the walls and ceiling washed.

Registry Office, Sudbury: Routine repairs were made.

Gaol, Sudbury: Routine repairs were made.

Lock-up, Foleyet: Routine repairs were made, an oil burning space heater installed and a new bath tub purchased.

Temiskaming:

Court House, Haileybury: Routine repairs were made, parapet walls and roofs were repaired and all exterior sheet metal work painted. No. 1 boiler was retubed.

Registry Office, Haileybury: Routine repairs were made.

Gaol, Haileybury: Routine repairs were made and new locks supplied for some rooms.

Lock-up, Elk Lake: Routine repairs were made.

Lock-up, Englehart: Routine repairs were made.

Mining Recorder's Office, Swastika: Routine repairs were made.

Thunder Bay:

Court House, Port Arthur: The general programme of renovation of the interior of this building was continued during this year but progress was retarded by shortages of labour and materials.

Registry Office, Port Arthur: Routine repairs were made.

Gaol, Port Arthur: Routine repairs and replacements were made including a new cooking range, 60 new prison locks, a vent canopy was installed in the kitchen and improvements made to the laundry heating system.

Registry Office, Fort William: Routine repairs were made.

ONTARIO HOSPITALS**Ontario Hospital, Brampton:**

This Institution, on loan to the Department of National Defence during World War II was returned to the Province on August 10th, 1946. The large army encampment was taken over with the property by arrangement with the Dominion Government as part of the settlement agreement. This Institution was then turned over to the Department of Reform Institutions for use as a reformatory for young prisoners as later referred to in this report.

Ontario Hospital, Brockville:

General routine repairs were carried out, a new pasteurizing machine installed and two food conveyors provided.

Ontario Hospital, Cobourg:

General routine repairs were made including repairs to boilers, chimneys and lightning rods on boiler room stacks.

Ontario Hospital, Fort William:

Routine repairs were made. The laundry was increased in size and equipment re-arranged. Arrangements were made to complete the new barn, work having been halted by material shortages during the previous year.

Ontario Hospital, Hamilton:

General routine repairs were made including repairs to the roofs of various buildings and repairs to passenger elevator in Infirmary Building.

Following a fire in the service wing of Orchard House, plans were made to remodel this wing including the kitchen and service rooms and the work was started immediately. Renovation of the staff dining room and servery in this building was also started.

A new pasteurizing machine was purchased for this Hospital.

Ontario Hospital, Kingston:

(Rockwood) General routine repairs were carried out including the application of insulating covering to two new domestic hot water storage heaters.

(Mowat) In addition to routine repairs at this division of this Institution a programme of renovation work was undertaken in pavilion No. 1. This work will include the complete rebuilding of the lavatory wings at the rear of this building, the structures of which have rotted out.

Ontario Hospital, Langstaff and Concord:

(Langstaff) General routine repairs were made including extensive repairs to plasterwork, repairs to roofs and the general overhaul of the deep wells and water pumps. Heating systems generally were repaired as required.

(Concord) Routine repairs were made as required and some new fencing material supplied.

Ontario Hospital, London:

Routine repairs were carried out including repairs to roof of rink and piggery. Defective tubes were removed from Nos. 3 and 4 boilers and replaced with new tubes.

Ontario Hospital, New Toronto:

General routine repairs were carried out.

In addition to the repair work the following items of major importance were also carried out:

The basement of cottage "A" was renovated to provide accommodation for workshops for clothing and shoe repairs.

The overhead primary electrical feeder supply line was found to be in poor condition and was replaced with a new underground service from the lake shore road to the main transformer station at the centre of the Institution.

A new hot water storage tank was installed in the laundry.

A system of underground piping was installed between the Nurses' Residence and the Greenhouse so that the Greenhouse could be heated from the central heating plant.

Ontario Hospital, Orillia:

General routine repairs were carried out including extensive repairs to metal flashings and eavestroughing on buildings generally, lightning rods were installed on the extension to the barn recently completed, No. 2 boiler was completely re-tubed and repairs made to the piggery boiler.

In addition to the foregoing, a wing of the Main Building, known as the Terrace Residence, was remodelled and equipped to provide necessary additional office space on the ground floor, a dispensary and drugs storage rooms in the basement and two apartments for married medical staff on the upper floors.

Ontario Hospital, Penetang:

General routine repairs were carried out.

Ontario Hospital, Port Arthur:

Routine repairs were carried out as required.

Ontario Hospital, Toronto (999 Queen Street, West):

Routine repairs were carried out.

In addition to the foregoing, a portion of the boundary wall at the south end of the hospital property was found to be leaning over and in serious condition, a contract was awarded and this section of the wall was rebuilt.

Psychiatric Hospital, Toronto:

General routine repairs were carried out and in addition the concrete pavement at the north and south entrances was removed and new pavement laid. Acoustical treatment was installed on the ceilings of single rooms, day rooms and corridors on the second floor of the south wing. New mastic tile flooring was laid in corridors on second floor.

Ontario Hospital, St. Thomas:

The arrangement made with the Dominion Government whereby the Province would take over the buildings as renovation work was completed by the Dominion Government, was continued during this fiscal year and the buildings, progressively taken over until this work was completed on May 31st, 1946.

General routine repairs were carried out on the buildings as taken over by the Province, the buildings were re-equipped and returned to the use of the Department of Health.

The work of repointing exterior stonework was continued during this fiscal year.

The work of changing the Chief Engineer's residence into a duplex residence with apartments for the Chief Engineer and his Assistant was carried on.

Plans were made and work started on the construction of a root house for this Institution.

An extensive programme of landscaping was undertaken including the purchase and planting of well developed trees.

Additional new laundry equipment was purchased and installed.

Ontario Hospital, Whitby:

General routine repairs were made including extensive repairs to tile roofs, tile entrance steps and interior tilework throughout the Institution. New roofs were laid over the garages and the roof of the piggery was repaired. Extensive repairs were made to the plasterwork in patients' dining halls.

Ontario Hospital, Woodstock:

General routine repairs were carried out including extensive repairs to brickwork of boilers Nos. 1 and 2.

Interior window guards were installed in 12 single room windows in the T. B. Division.

The farm under drainage system was extended by the installation of 1,850 feet of additional drainage tile.

Ontario Hospital, Montague Township:

Working drawings were completed, contracts awarded and a start made on the erection of the first section of this new Ontario Hospital School for mental defectives in Eastern Ontario.

Present plans call for an ultimate capacity of 1,200 beds for patients in this Hospital and the first projects now under way will provide beds for some 900 patients together with central dining halls and kitchen and other service wings.

EXAMINATION OF PLANS FOR THE DEPARTMENT OF HEALTH

Generally, plans were examined and recommendations forwarded to the Department of Health in connection with new construction, alterations and additions to General Hospitals, Hospitals for Incurables, Red Cross Hospitals, Sanatoria and Private Hospitals.

Proposals of various kinds were dealt with this fiscal year in connection with the following:

General Hospitals

Belleville, Belleville General
Blind River, St. Josephs
Brantford, General
Clinton, Memorial
Cochrane, Lady Minto
Dunnville, Haldimand War Memorial
Goderich, Alexandra Marine and General
Guelph, St. Josephs
Hamilton, General
Hamilton, Mount Hamilton
Hanover, Hanover Memorial
Kenora, General
Kingston, Hotel Dieu
Kitchener, Waterloo

Kitchener, St. Josephs
Leamington, District Memorial
London, Victoria
Mattawa, General
Newmarket, York County
Niagara Falls, General
North Bay, Queen Victoria Memorial
North Bay, General
Oakville, Trafalgar Memorial
Orillia, Soldier's Memorial
Oshawa, General
Ottawa, Civic
Pembroke, Pembroke Cottage
Petrolia, Charlotte E. Englehart
Port Colborne, Memorial
Southampton, Saugeen Memorial
Stratford, General
Sudbury, General
Toronto, St. Josephs
Toronto, Wellesley
Toronto, 10 Maynard Avenue (Proposed Alcoholic Clinic)
Toronto, Western
Trenton, Memorial
Walkerton, Bruce County
Winchester and District Memorial

Convalescent Homes

Fonthill, Devonia Convalescent
Hamilton, Infants Home
Kingston, St Mary's on the Lake
Kilworthy, Ontario Society for Crippled Children "Woodeden"

Red Cross Hospitals

Bancroft
Espanola
Huntsville
Mindemoya
Thessalon
Wiarton

Sanatoria

Fort William
Guelph, Homewood Sanatorium
Ottawa, Royal Ottawa Sanatorium

Private Hospitals

Ajax, University of Toronto
 Creemore, Proposed
 Copper Cliff, International Nickel Company
 Deep River, Village
 Espanola, Espanola Private Hospital
 Hagersville, Miss Ratcliff's Proposed Hospital
 Kapuskasing, Sensenbrenner
 Long Lac, Hospital
 Lansing, Missionary Health Institute
 London, Mason Villa
 London, Salvation Army Bethesda
 Markdale, Markdale Private
 Milton, Dr. Stevenson's Hospital

 Toronto, Oakwood Clinic
 Toronto, Mrs. A. Milbury, 23 Woodside (proposed Rest Home)
 Toronto, Homewood Rest Home
 Toronto, Fenndale (proposed Private Hospital)
 Toronto, Allen Rest Home
 Toronto, St. Mary's
 Vineland, Mennonite Brethren Bethesda Home
 Prescott, Proposed Health Centre

Department of Welfare

Brantford, Day Nursery
 Toronto, Bethel Home, Parkside Drive

ONTARIO REFORMATORIES**Ontario Reformatory, Brampton:**

The former Ontario Hospital property at Brampton which was loaned to the Dominion Government during World War II was returned to the Province on August 10th, 1946, and turned over to the Department of Reform Institutions for use as a reformatory for young prisoners.

The administration building, which is of fire resisting construction and the only permanent building built on this property and intended as the first of a group of buildings in the hospital scheme, has now been completed for use as an administration building for the Reformatory.

The large encampment of wooden construction built by the Dominion Government for army purposes was retained by the Province under arrangement with the Dominion Government, some of these buildings were remodelled and are now in use by the Reformatory for housing prisoners and others are in course of remodeling for this purpose.

Some buildings will be dismantled and the materials used in connection with the erection of temporary buildings at the Ontario Agricultural College and the Ontario Veterinary College at Guelph.

Industrial Farm, Burwash:

Co-operation was given to the Superintendent of this Institution in the matter of their building programme which included the erection of staff residences being built from plans previously prepared by this Department.

A new boiler feed pump was supplied for camp No. 2 cell block.

Ontario Reformatory, Guelph:

At this Institution repairs were made to boilers generally and boilers Nos. 3 and 4 were completely retubed.

Ontario Reformatory, Mimico:

Working drawings were prepared and the work started in connection with complete overhaul and modernization of the brick and tile making plant as was required to increase the quality and production rate to meet the needs of this Department's future building programme.

Some new brick making equipment and machinery has already been ordered for this work.

Industrial Farm, Monteith:

This Institution as noted in previous reports is still on loan to the Department of National Defence and its occupancy was continued during this fiscal year.

Andrew Mercer Reformatory, Toronto:

Routine repairs were made and fire doors were installed on the paint shop.

Boys' Training School, Bowmanville:

On expiration of the Dominion Government's occupancy of this Institution it was arranged that they would undertake the work of restoring the buildings to the condition they were in when the Dominion Government first took over. This work has been done and the buildings and grounds returned to the use of the Province on June 13th, 1946. The Department of Reform Institutions took formal occupancy this date.

Boys' Training School, Galt Division:

General routine repairs were carried out. The boiler feed pump was completely overhauled and a motor was installed on the existing platform ash hoist.

A start was made on the preparation of working drawings for a residence for the Superintendent.

Assistance was given to the Institution in the matter of laying out an athletic field for the School and mechanical grading equipment was rented for grading purposes.

Girls' Training School, Cobourg:

General routine repairs were made including extensive repairs to the heating system and heating equipment in the McCook Residence and to the stoker and boiler in the Strathmore Residence.

The roof of the Gymnasium was re-shingled.

DEPARTMENT OF LANDS AND FORESTS

Saulte Ste. Marie:

Working drawings were prepared, contracts awarded and the work started on a large addition and alterations to the Air Service Division hangar and workshops. The addition to the hangar will provide storage space for 50 planes together with a new engine test house, fabric shop and parts storage and office spaces and alterations and extensions of the present workshops, boiler plant, sea wall and ramps.

DEPARTMENT OF TRAVEL AND PUBLICITY

In connection with the setting up of Tourist Reception Centres at various points of entry to the Province, the Public Works Department arranged for the purchase of prefabricated type buildings from the War Assets Corporation, prepared working drawings for the necessary alteration work and arranged for dismantling and removal of the buildings and their re-erection at the new sites.

Buildings, for this purpose, of the type referred to above, were purchased and construction started at the following locations:

Prescott,
St. Catharines,
Windsor, (Huron Line, Bridge Exit)
Windsor, (Tunnel Exit)

At Ivy Lea, an existing building was purchased, plans prepared for necessary alterations and the work proceeded with.

Preliminary arrangements have been made and working drawings prepared for similar centres at:

Pigeon River, (Fort William District)
Fort Francis,
Kenora,
Fort Eric.

DEPARTMENT OF HIGHWAYS

Co-operation was given as usual to the Department of Highways in the matter of the preparation of working drawings and specifications for new Highways' buildings, and alteration to existing Highways' buildings. Supervision of the erection of these buildings was also undertaken by this Department and inspections were made of divisional headquarters and other buildings in connection with alteration work as required.

The work carried out in this connection included:

Pembroke:

Completion of double plow building.

Huntsville:

Survey and drawings made for minor alterations to garage building and installation of steam heating.

Sudbury:

Survey of garage and workshop in connection with proposed alterations.

North Bay:

Survey in connection with alterations to existing buildings and proposed new office building.

Hamilton:

Survey in connection with alterations and improvements to lighting system at the Divisional Headquarters buildings.

Toronto District:

Completion of Paint Shop building, Leaside.

Survey for minor alterations to building at Port Credit.

Survey for minor alterations to building at the Rouge River.

ONTARIO GOVERNMENT OFFICE BUILDINGS**Ontario Government Building, Kingston:**

Extensive alterations were made to the Department of Health Laboratories in this building. The old lecture hall was subdivided, and additional laboratory and office spaces provided.

The electric lighting system was improved in the Highways Department offices and draughting room and also in the Health Department laboratories and offices.

Ontario Government Building, New Liskeard:

Routine repairs were made in this building.

DRAWINGS AND REPORTS PREPARED AND OTHER WORK RENDERED FOR THE VARIOUS DEPARTMENTS OF THE GOVERNMENT

In addition to the preparation of working drawings and specifications required for the various items of work carried out by this Department and recorded here-inbefore, the following items of work, of a special nature, and for projects not proceeded with during this fiscal year, are listed as a matter of record:

For Department of Lands and Forests:

Working drawings have been prepared for residences and workshops to be erected, next fiscal year, at various locations in Northern and North Western Ontario for the use of pilots at outpost stations of the Air Service Division.

Working drawings have also been prepared for a residence, ice house and workshop building for early construction at the White Lake Fish Hatchery.

Working drawings are now being made for a Fish Culture Research Laboratory at the Southern Experiment Station, Maple.

In addition to the foregoing working drawings we have also prepared sketch plans for the following work for future development:

Wildlife Building, Algonquin Park

Office Building, Kenora

Office Building, Eastern Forest Station, Kemptville

Block Plan of built up areas of Rondeau Park

For Department of Agriculture:

Working drawings were made and prices called in connection with the renovation of the mechanical refrigeration plant at the Brighton Cold Storage building.

A series of finished graphs and charts were made from layouts supplied by Department of Agriculture to show the flow of traffic and other data required in connection with the proposed new Food Terminal Warehouse, Toronto.

For Department of the Attorney-General:

Working drawings have been prepared for Radio Transmitter buildings to be built at eleven locations in South, South Eastern and South Western Ontario for the proposed new Provincial Police Radio System.

Working drawings were prepared for additions and alterations to the Provincial Police Lock-ups at Pickle Crow Lake and Geraldton.

Sketch plans were also made for a proposed addition to the Lock-up at Burk's Falls to provide living quarters for the constable.

For Department of Health:

Working drawings were prepared for extensive alterations and improvements to the central heating plant at the Ontario Hospital, Woodstock.

Working drawings are being made for a proposed new patients reception unit in the north building at the Ontario Hospital, London.

Sketch plans were made for a proposed extension of the laboratory facilities at Sault Ste. Marie.

For Department of Prime Minister:

Departmental organization charts were revised as required and photostatic copies arranged for.

For Department of Reform Institutions:

Working drawings were prepared for the following work at Reform Institutions:
New Barn, Industrial Farm, Burwash.

Alterations to provide gymnasium at the Mercer Reformatory, Toronto.

Alterations to Administration Building, Ontario Reformatory, Guelph.

Alterations to Central Heating Plant, Ontario Reformatory, Mimico.

Residence for Principal, Boys Training School, Galt.

For Department of the Provincial Treasurer:

PROVINCE OF ONTARIO SAVINGS OFFICES

Co-operation was given in the usual manner to the Head Office management of the Savings Offices in the matter of general routine maintenance and repair work at the branches where such work was requested and renewals of expiring leases were negotiated and arranged as directed.

BOILER INSPECTION

The boiler inspection work of this Department, as in previous years, was carried out by the Heating Engineer, as an addition to his duties as Chief Stationary Engineer for the Parliament Buildings, assisted by the Inspector of Mechanical Services.

Excluding the plants which have been loaned to the Department of National Defence for their own operations and responsibility in connection with the Institutions loaned for purposes of World War II, the inspection work covered this year under the above heading may be described as follows:

The boilers and boiler equipment and heating equipment of the Legislative and Departmental Buildings, Osgoode Hall, Educational Buildings, Agricultural Buildings, District Buildings, Ontario Government Hospitals, Ontario Training Schools and Ontario Reformatories were inspected and reported upon for safety and proper operation and to determine the extent of the repairs and materials needed for such repairs to properly maintain and operate the power and heating plants in the various building groups referred to. In the case of the Ontario Hospitals and the Ontario Reformatories, the reports, as referred to, were sent to the Department of Health and Provincial Secretary, respectively, for their attention in the matter of making repairs recommended.

The recommendations contained in these reports regarding plants in all the other building groups, referred to in this section, were attended to by the Department of Public Works.

I have the honour to be, Sir,

Your obedient servant,

GEORGE N. WILLIAMS,
Chief Architect.

Toronto, March 31st, 1947.

REPORT OF THE ENGINEER

Honourable G. H. Doucett, M.P.P.,
Minister of Public Works.

January 29, 1948

Sir,—

I have the honour to report on the work done by the Engineer's Branch of the Department of Public Works, Ontario, during the fiscal year April 1, 1946, to March 31, 1947.

As usual, all work was done by day labour under local foremen, employing local men wherever possible.

The usual maintenance of locks, dams, docks and navigable channels was carried out. The South Dollars Dam, which was partly built in 1945, was completed, and a new stone and concrete dam was built on the Naiscoot River in Parry Sound District. Drainage work was done in eleven districts, and aid was given to nine drainage schemes under the Provincial Aid to Drainage Act.

Maintenance work was as follows:

All buoys taken out by the spring floods and ice were replaced to make the navigation channels safe for travel.

Pickernel River Dam, Parry Sound District

A large hole had been washed out in the rock just below this dam and any further washing would have endangered one of the piers of the dam. This hole was filled with stone and concrete to prevent further erosion.

The earth dam on the ravine to the west of the main dam was strengthened by adding more fill on the upstream side.

Magnetawan Dams, Parry Sound District

New plank decks were put on the dams at the locks and the dam on the south channel. A number of new stop logs were provided and all the piers of the dams were repaired as they had been damaged by the erosion of water and ice.

Walker Lake Dam, Muskoka District

This timber dam had become badly decayed and was leaking so much that the lake could not be held at its proper level. The decayed timber was replaced, new sheeting put on the face, and gravel put on the sheeting to prevent leakage.

Deer Lake Dam, Parry Sound District

This old timber dam was badly damaged by the spring floods and was leaking so much that the lake was very low most of the summer. Attempts to stop the leaks by sheeting and filling with brush, gravel and other material proved almost useless and it was decided that a new dam would have to be built before another season.

Port Sandfield Docks, Muskoka District

Most of the top of these docks was renewed with new planking and made safe for traffic.

Minor repairs were made to several other docks, dams and locks.

Naiscoot River Dam, Parry Sound District

This dam holds the water level up on Naiscoot Lake and Wilson Lake and makes possible a navigation route of about 10 miles for tourists. There was an old lumberman's timber dam at this site but it was badly decayed and could not hold the lakes at the proper level.

A new stone and concrete dam was built on the site of the old dam. The main dam is 40 feet long and 15 feet high at the centre. It has a sluiceway 8 feet wide and 8 feet deep and is provided with stop logs and winches to control the flow of water. There are two short wing dams on the east side and one on the west side of the main dam. A timber deck was provided to enable the operator to handle the stop logs.

Dollars Dam, Parry Sound District

There are two dams on the Pickerel River at the outlet of Kawigamog Lake. Concrete dams have replaced both of the old timber dams. The north dam was built in 1943 and 1944. The south one was partly built in 1945 and completed in 1946. These dams are now in good condition and should require very little maintenance for many years to come.

Municipal Drainage

Drainage work was carried out in the following districts: Sudbury, Nipissing, Algoma, South Renfrew, North Renfrew, Parry Sound, Frontenac, Victoria and Haliburton, Centre Simcoe, East Simcoe, and Peterborough.

Provincial Aid to Drainage

Ackert Drain, Kinloss Township

This drain was repaired in accordance with the report, plans and specifications prepared by Mr. W. G. McGeorge, Civil Engineer, of Chatham, Ontario. These repairs consisted of deepening, widening and straightening the drain from the north limit of lot 7, Concession 11, to lot 12, Concession 5 in Kinloss Township, a total distance of $5\frac{3}{4}$ miles. It was widened to a bottom width of 3 feet at the upper end and gradually widened to 18 feet at the lower end. The depth of cut averaged about $2\frac{1}{2}$ feet except for a new section of ditch where it was moved off the road allowance between lots 10 and 11 for a distance of 2,000 feet. Here the depth of cut averaged a little over 5 feet. The side slopes were 1 to 1.

paid the Township of Kinloss according to the Act.

The total cost of the work was \$11,075.50, and on report a grant of \$2,215.10 was

Tayside Drain, Roxborough Township

This drain was improved in accordance with the report, plans and specifications prepared by the late Mr. F. Stidwell, Civil Engineer, of Cornwall, Ontario. The work consisted of deepening and widening the drain from the centre of lot 9, Concession 9, Roxburgh Township, to lot 14, Concession 1, South Plantagenet Township, a total distance of nearly $5\frac{1}{2}$ miles. The depth of cut averaged about 2 feet and there were two rock bars which had to be blasted out. The bottom width was made 3 feet at the upper end, gradually widening to 5 feet at the lower end, and the side slopes were 1 to 1. Another trunk channel started at the middle of lot 11, Concession 9, and joined the main drain on lot 13, Concession 9, Roxborough Township. It has a total length of 4,875 feet, and a bottom width of 2 feet at the upper end and 3 feet at the lower end. The depth of cut averaged about 2 feet, with side slopes of 1 to 1.

The total cost of these trunk channels was \$10,937.65, and on report a grant of \$2,187.53 was paid the Township of Roxborough in accordance with the Act.

McLeod Drain, Caledonia and Kenyon Townships

This drain was repaired in accordance with the report, specifications and plans prepared by Mr. H. J. Walker, Civil Engineer, of Cornwall, Ontario. Work on the main channel started at the easterly limit of lot 17, Concession 9, Kenyon Township, and continued downstream to lot 24, Concession 8, Caledonia Township, a total distance of $5\frac{3}{4}$ miles. It has a bottom width of 2 feet at the upper end and 6 feet at the lower end. The depth of cut varied from 4 to 8 feet, and there was considerable solid rock to blast out. Work on another trunk channel known as the West Branch started on lot 20, Concession 9, Kenyon Township, and continued north-easterly to lot 9, Concession 9, Caledonia Township, where it empties into the main channel. It has a total length of $1\frac{1}{4}$ miles. The bottom width of this channel is $2\frac{1}{2}$ feet throughout and the depth of cut about 3 feet. There was some rock to blast out on this channel. The side slopes on both channels were $1\frac{1}{4}$ horizontal to 1 vertical.

The cost of both channels was \$25,171.71. On report a grant of \$5,034.34 was paid the Township of Caledonia, the initiating municipality, in accordance with the Act.

Pollard Drain, Hullett Township

This drain was repaired according to the report, specifications and plans prepared by Mr. F. A. Edgar, Civil Engineer, of Gorrie, Ontario. Work started on the main channel at the line between Concessions 13 and 14 on lot 17 and continued downstream to lot 25, Concession 10, Hullett Township, where it empties into the Maitland River, a total distance of a little over $5\frac{1}{2}$ miles. It has a bottom width of 3 feet at the upper end and 6 feet at the lower end. The depth of cut averaged about 3 feet. Another channel starts on lot 20, Concession 11, and continues to lot 24, Concession 11, where it joins the main channel, a total distance of $1\frac{3}{4}$ miles. It is 3 feet wide at the upper end and $3\frac{1}{2}$ feet at the lower end. The depth of cut averaged about 3 feet. The side slopes were 1 to 1 for both channels.

The total cost of the work on both channels was \$12,221.73. On report a grant of \$2,444.35 was paid the Township of Hullett in accordance with the Act.

No. 1 Government Drain, Tilbury East Township

This drain was repaired in accordance with the report, specifications and plans prepared by Mr. C. G. R. Armstrong, Civil Engineer, of Windsor, Ontario. The repairs consisted of deepening and widening the old drain from the boundary road between Tilbury East and Romney Townships at the line between lots 9 and 10, Tilbury East, northerly across Tilbury East Township to its outlet into Jeannette's Creek at the boundary line between Tilbury East and Raleigh Townships, a total distance of $11\frac{1}{2}$ miles. It has a bottom width of 5 feet at the upper end and gradually widens to 30 feet at the lower end. The depth of cut averaged about 2 feet and the side slopes are $1\frac{1}{4}$ horizontal to 1 vertical.

The total cost of the work was \$26,051.80, and on report a grant of \$5,210.36 was paid to the Township of Tilbury East in accordance with the Act.

Tunnel Drain, Romney Township

This drain was repaired in accordance with the report, specifications and plans prepared by Mr. C. G. R. Armstrong, Civil Engineer, of Windsor. This drain has proven to be an expensive one to maintain as it is quite deep towards the lower end, being 35 feet deep where it enters the tunnel, which is an underground channel 1,000 feet long and carries the water to Lake Erie. The banks of the drain keep sliding in and filling it up so that it cannot drain the land. Work on the drain was started

at the line between lots 24 and 25 on the road between Concessions 2 and 3, Romney Township, and continued westerly, then southerly, to the tunnel, a total distance of 2 miles. In order to prevent the banks sliding in they were given a slope of $1\frac{1}{2}$ horizontal to 1 vertical. This made considerable extra excavating and added greatly to the cost, especially in the deeper section of the drain. The bottom width was made 5 feet throughout and the depth of cut varied from 1 to 4 feet.

The cost of this work as reported by the Treasurer of the Township was \$15,705.85, and on report a grant of \$3,141.17 was paid to the Township of Romney according to the Act.

Cole Drain, Niagara Township

This drain was repaired according to the report, specifications and plans prepared by Mr. R. B. Erwin, Civil Engineer, of Niagara Falls, Ontario.

The work consisted of deepening and widening the old drain from lot 144 northerly and easterly to lot 108 where it empties into Four Mile Creek, a total distance of about 4 miles. It was widened to a bottom width of 4 feet at the upper end and gradually widening to 8 feet at the lower end. The depth of cut averaged about 4 feet and the side slopes are $1\frac{1}{4}$ horizontal to 1 vertical.

The cost of the work as certified to by the Treasurer of the Township was \$14,923.45. On report a grant of \$2,984.69 was paid to the Township of Niagara in accordance with the Act.

Spring Creek Drain, Wallace Township

This drain was repaired according to the report, specifications and plans prepared by Mr. R. W. Code, Civil Engineer, of London, Ontario. Work on this drain started at the town line between Wallace and Elma Townships on lot 34, Concession 1, Wallace, and continued northwesterly to lot 38, then southwesterly to lot 42, Concession 1, Wallace Township, then south into Elma Township, then westerly across lots 10 to 1, Concession 1, Elma Township, and then westerly across lot 70, Concession 1, Grey Township, a total distance of a little over $4\frac{1}{4}$ miles. The drain has a bottom width of 3 feet at the upper end and 7 feet at the lower end. The average depth of cut was about 2 feet, and side slopes are 1 to 1.

The final cost of this work as reported by the Treasurer of Wallace Township was \$11,498.56, and on a report a grant of \$2,299.71 was paid to the Township of Wallace according to the Act.

McDougall Drain, Tilbury East Township

This drain was repaired according to the report, specifications and plans prepared by Mr. C. G. R. Armstrong, Civil Engineer, of Windsor. Work started on the old drain at the South Rear Road on the line between lots 12 and 13, and extended northerly and easterly to a point where the road between Concessions 5 and 6 meets the boundary road between Tilbury East and Raleigh Townships, where it empties into No. 1 Government Drain. The total length of drain improved was $6\frac{1}{2}$ miles. It was widened to a bottom width of 3 feet at the upper end and gradually widened to 15 feet at the lower end. The side slopes are $1\frac{1}{4}$ horizontal to 1 vertical.

The cost of this work as reported by the Treasurer of Tilbury East Township was \$10,853.20, and on report a grant of \$2,170.64 was paid to the Township of Tilbury East in accordance with the Act.

I have the honour to be, Sir,

Your obedient servant,

J. W. HACKNER,
Engineer of Public Works.

STATEMENTS

OF THE

ACCOUNTANT

OF

Public Works Department

1946 - 1947

Department of Public Works, Ontario,

TORONTO, March 31st, 1947.

The Honourable George H. Doucett, M.P.P.,
Minister of Public Works.

Sir:—

I have the honour to submit detailed statements of Ordinary Expenditure of Civil Government and maintenance and repairs of Government Buildings and Public Works; also Capital Expenditure on Provincial Public Buildings and Public Works, during the fiscal year which ended on the 31st of March, 1947.

I have the honour to be, Sir,

Your obedient servant,

S. WOOD,
Secretary and Accountant

SUMMARY OF EXPENDITURE

FOR FISCAL YEAR APRIL 1st, 1946 to MARCH 31st, 1947

Service	Ordinary	Capital	Total
Main Office—Administration expenses, etc. \$	154,254.68		154,254.68

TO HIS HONOUR

THE LIEUTENANT-GOVERNOR IN COUNCIL

May It Please Your Honour:

The undersigned has the honour to present to Your Honour the twenty-eighth Report of the Department of Labour of the Province of Ontario for the fiscal year ending March 31, 1947.

All of which is respectfully submitted.

CHARLES DALEY,

Minister of Labour.

REPORT OF THE DEPUTY MINISTER OF LABOUR For the Fiscal Year Ending March 31, 1947

TO THE HONOURABLE CHARLES DALEY,
MINISTER OF LABOUR.

SIR:

I have the honour to submit to you a report on the work of the Department of Labour for the fiscal year ending March 31, 1947.

Each branch of the Department has given a detailed account of its activities which is appended hereto and such account should be taken as fulfilling any statutory requirement imposed on a branch or board to make an annual report on its work.

A perusal of the report of each branch will reveal that the volume of work handled by the Department of Labour in the past fiscal year has increased considerably. In large measure this has been due to a heavy programme of expansion which has been going on in industry. A glance at the report of the Factory Inspection Branch will indicate that the number and value of plans examined and approved for new or additional industrial construction have risen sharply. It may well be said that this is a good omen for the future in respect of employment and for the material welfare of the people of Ontario.

I am happy to be able to report that the Factory Inspection Branch and the Composite Inspection Branch are rapidly reducing the backlog of work which grew out of the heavy expansion of industry in the war years, and that the work will be caught up during the next few months. It is my confident hope that at the end of the next fiscal year we shall find that a reorganization of inspection districts will have been completed and that additional, trained, competent personnel will be available to meet the expanding requirements of the Branch. It should be said, in passing, that industry has co-operated whole-heartedly in connection with our factory inspection work.

A review of the work done by the Board of Examiners of Operating Engineers reveals that it has increased considerably. The number of persons holding current certificates is 18,486 which represents an increase of approximately 1,000 over the previous fiscal year. During the war years there was a serious shortage of qualified engineers of all categories, but in some measure this deficit has been met. It is interesting to note that veterans who have applied to qualify were markedly successful. It should be borne in mind, however, that the increase in qualified engineers which has taken place in the past year will not remove the opportunity for young men to find suitable employment and excellent prospects for advancement in this field as the industrial picture in this Province unfolds.

I wish to draw your attention to the activities of the Canadian Steam Boiler Institute and to its conference held in Januray, 1947, at which this Department was represented by the Chief Inspector of the Boiler Inspection Branch. It is expected that out of such discussions will come proposals which will be of assistance in seeing that the highest requirements in reference to safety will be made uniform in Canada in connection with boiler inspection.

A perusal of the report of the Chief Conciliation Officer indicates that a great measure of success has been attained in lessening and resolving industrial disputes. The work of conciliation, mediation and arbitration has continued its important role in the activities of the Department and the work is increasing in volume.

As you will note from the report made on behalf of the Ontario Labour Relations Board, the volume of work handled by the Board has increased, and it is likely to continue to do so with the termination of the arrangements between Ontario and the Dominion, which was forecast for March 31, 1947, in respect of the administration of the Wartime Labour Relations Regulations.

I feel that I should not let the occasion of the dissolution of the Regional War Labour Board for Ontario pass without paying tribute to the representatives of labour and management who served on it. Their conduct, their realistic viewpoints, and their confidence in one another have set an example of the high plane of co-operation which can be reached between management and labour in dealing with problems of mutual interest. I had the honour to have a close association with these gentlemen from March, 1943, until March, 1947, as Chief Executive Officer of the Board.

The activities of The Industry and Labour Board in reference to the administration of The Hours of Work and Vacations with Pay Act, 1944, The Industrial Standards Act and The Minimum Wage Act have had an important effect on the welfare of people engaged in industry in Ontario. The full details of the work of the Board, including that of the Minimum Wage Branch, during the year are set out in its report.

The report of the Apprenticeship Branch will prove gratifying. There is an ever-expanding field for young men and women to take training in trades and crafts which are vital to our progress. It is interesting to note that our apprenticeship training has expanded greatly and that more and more young people have realized that there are excellent opportunities for education and employment to be found as a result of training obtained under the apprenticeship scheme.

LEGISLATION

No major changes in legislation became effective in the fiscal year 1946-47, although several important matters were before the Legislature for consideration at its session which adjourned on April 3, 1947. Reference will be made to these in the next annual report.

During the year the trade of worker in servicing and installing air-conditioning or refrigerating equipment was designated under The Apprenticeship Act.

New regulations were also made under The Factory, Shop and Office Building Act for the improvement of working conditions in terminal and other large grain elevators.

PERSONNEL

It is with regret that I note the passing of several valued and esteemed members of the staff of the Department of Labour. Mr. Walter Thorne, an inspector in the Apprenticeship Branch, Miss Marion Findlay, who had been acting as Statistician to the Department, Mr. Norman S. Smith, an inspector in the Boiler Inspection Branch, and Mr. J. R. Prain, Chief Inspector of the Factory Inspection Branch, were long-service employees of the Department and watched it develop to its present, important position in the public service. Each of them contributed a full share to its progress. Their deaths are much regretted by their associates in the Department.

During the fiscal year the undersigned was appointed Deputy Minister of Labour.

Several of the valued employees of the Department retired on superannuation, namely, Mr. J. M. Kelly, Mr. Robert Albrough and Mrs. M. L. Ferguson, inspectors of the Composite Inspection Branch, Mr. A. E. Palmer, an inspector in the Apprenticeship Branch, and Mr. W. G. Kent, a clerk in the Main Office. The services of Mr. Kelly have been retained on a temporary basis.

All of which is respectfully submitted.

J. B. METZLER,

Deputy Minister of Labour.

FACTORY INSPECTION BRANCH

CHIEF INSPECTOR, DEPARTMENT OF LABOUR: E. H. GILBERT

The sixty-first annual report of the Factory Inspection Branch covers the fiscal year ending March 31, 1947. It is with sincere regret that the death of Mr. J. R. Prain is reported. Mr. Prain served this Branch for over twenty-five years and was Chief Inspector since 1933. His knowledge and broad experience earned him the respect of employers and employees throughout the Province.

INDUSTRIAL HAZARDS

Accidents reported under sections 59, 60 and 61 of The Factory, Shop and Office Building Act showed a further decline for the period under review, being approximately twenty per cent lower than during the previous twelve months. This reduction was noted in all classes of industry except in lumbering where a slight increase over the previous year was recorded. A reduction of about thirty per cent in the number of reportable accidents in the metal trades is of particular interest.

HOURS OF WORK

The continual trend to shorter daily and weekly working hours is shown in the statistical section of this report. It is desirable that inspections should be made of industries during their peak seasonal period of production and accordingly many of those firms shown working in excess of the forty-eight-hour week are working on seasonal permits issued by The Industry and Labour Board. This trend to shorter hours has resulted in a further reduction of the number of overtime permits issued for the employment of women later than 6.30 p.m. Overtime permits were issued to 373 firms this fiscal year as compared with 530 firms during the previous year.

In an effort to maintain industrial production under these circumstances there is a wider use of the double-shift permit which enables the employment of women in factories on two shifts, neither to exceed eight hours. Two hundred firms used these permits as compared with 108 during the previous year and ninety-three in 1944-45.

RESTAURANTS

One hundred and twelve additional permits under section 29 of The Factory, Shop and Office Building Act were issued to restaurant proprietors for the employment of women over eighteen years of age until 2 a.m. The issuance of such permits, however, does not release the employer from complying with the provisions of The Hours of Work and Vacations with Pay Act, 1944.

Under the provisions of these permits the daily period of employment must be completed within twelve consecutive hours, and transportation direct to the worker's home must be provided, and a bonus of thirty cents a night paid in addition to regular wages. Court action was resorted to in one instance when a restaurant proprietor was convicted for violation of this regulation.

CHILD LABOUR

The problem of child labour was not a major one during the year. Only seventy-three cases of alleged violations of the section of the Act prohibiting child labour were reported as compared with 238 in 1945-46 and 444 in 1944-45. In most instances these cases develop during the school recess and are corrected immediately without recourse to prosecution. Regulations governing

the employment of children are understood generally. The violations are due mainly to false statements of age being made by young persons and carelessness of employers in checking these statements.

HOMEWORK

During the year 524 employers' permits were issued under section 49 of The Factory, Shop and Office Building Act to different firms authorizing them to give out work to be done in homes at rates approved by The Industry and Labour Board. Homeworkers' permits were issued to 2,302 persons undertaking manufacturing or assembling of household articles or articles of wearing apparel. Premises, where the work is undertaken, are inspected to ensure that conditions in the home are satisfactory.

GENERAL

Extensive regulations for the improvement of working conditions and control of hazards in grain elevators were approved during the year as a result of which the operators will be compelled to undertake large expenditures to improve the conditions and the safety appliances in such structures.

Three members of the field inspection staff were superannuated during the year and these vacancies were filled by transfer and appointment. Plans will be put into effect shortly to revise the inspectorial districts throughout the Province which will reduce district boundaries and ensure more frequent inspections of industrial premises.

All inspectors met in convention with officials of the Department of Labour and Division of Industrial Hygiene, Department of Health, during the winter and opportunity was offered for discussion of the problems which confront them in the field.

Sincere appreciation is expressed to the Director, Division of Industrial Hygiene, and to the members of his staff for their expert and efficient services made available to this Branch in the prevention of accidents and industrial diseases.

PLANS FOR BUILDINGS

The plans of 1,199 new factories, shops and office buildings, or additions and alterations to such buildings, were approved during the fiscal year. The total estimated construction cost amounted to \$57,757,600. During the preceding fiscal year 913 plans had been approved for construction work valued at \$33,151,685.

The number and the value of the approved construction projects exceeded all previous maxima shown in the Branch's records. The total value of \$35,237,150 for 1929 was exceeded by \$22,520,450.

The total values during the fiscal years 1927 to 1947 are shown on the graph on page 9. One hundred and eleven approvals or 10.8 per cent of the total were for buildings which cost \$100,000 or more.

The following table has been compiled to compare the growth of the various industries and trades in the Province during the year:

CLASSIFICATION OF APPROVED BUILDING PLANS

Trade or Industry	Number of plans	Value of buildings	Percentage of total value
Bakeshops.....	14	\$ 554,300	.96
Chemicals.....	135	6,362,500	11.01
Clay, glass and stone.....	34	1,136,100	1.96
Clothing.....	46	1,126,300	1.95
Conveyances.....	10	866,500	1.51
Food.....	122	6,505,200	11.22
Garages.....	96	2,424,200	4.22
Laundries and cleaners.....	29	440,200	.76
Leather.....	12	259,300	.45
Lumber.....	12	69,500	.12
Metals.....	298	8,937,000	15.46
Offices.....	43	6,675,300	11.55
Paper trades.....	31	9,236,200	16.02
Plastic working.....	11	268,900	.47
Printing and publishing.....	33	3,128,200	5.42
Restaurants.....	8	201,000	.35
Rubber.....	19	1,348,600	2.33
Shops.....	37	1,561,100	2.71
Textiles.....	36	2,801,900	4.86
Warehouses.....	62	1,859,800	3.21
Wholesale.....	12	716,300	1.24
Woodworking.....	77	865,400	1.50
Unclassified.....	22	413,800	.72
TOTAL.....	1,199	\$57,757,600	100.00

The metals industries had the largest number of plans approved and the total value of the projects immediately followed the paper trades. In the two preceding years the metal-working industries had had the largest number and the highest value of approved projects. There has been continued improvement in working conditions in foundries, brought about by the installation of mechanical ventilation and by mechanizing the sand preparation, moulding and shake-out operations as much as practicable.

Construction of new office buildings is shown to be in third place in value. The majority of this type of construction was done in Toronto. Included in this group are new buildings for telephone services which are now being expanded to compensate for the entirely restricted construction of such buildings during the war years.

The chemical industry dropped from its second place last year to fourth place this year in the list of construction values although the difference was only slightly over \$1,000,000. The extension of paint and varnish factories, for the second successive year, comprised the largest proportion of the chemical industries' building projects.

On July 20, 1946, the regulations for grain elevators were published in the Ontario Gazette and Ontario became the first province to enact specific legislation for the improvement of working conditions in terminal and other large grain elevators. The industry has been supplied with the basic requirements and as quickly as the materials and trained workmen become available, the

necessary improvements in existing elevators are being made. The installation of mechanical dust-control equipment involves large expenditures and systems costing one to two hundred thousand dollars for each elevator are not uncommon. However, the great reduction of possible dust explosions and the increase of healthier working conditions generally more than compensate for these capital expenditures. A large elevator was approved for construction in Toronto and every requirement of the new regulations has been incorporated in the filed drawings.

Twelve hundred and thirty-one office interviews with architects, engineers and employers were held regarding the approval of building plans. This number represents an increase of 228 over last year's total of 1,003 interviews and is the maximum number recorded to date.

One hundred and eight field inspections were made by the Examiner of Plans to facilitate plan approvals and to investigate the unsafe buildings, insufficient exits, hazardous processes and other questions requiring special technical knowledge.

INSPECTION STATISTICS

The following is the distribution of the services rendered by the inspectors of the Composite Inspection Branch:

FACTORY INSPECTION BRANCH:	1946	1947
First inspection.....	17,070	18,219
Second inspection.....	5,604	4,175
Visits re fruit camps.....	42	23
	22,716	22,417
Apprenticeship Branch.....	1,158	1,178
Industrial Standards Branch.....	361	327
Main Office.....	1,169	2,938
Minimum Wage Branch.....	384	512
Operating Engineers Branch.....	773	355
Steam Boiler Branch.....	2,346	963
	6,191	6,273
TOTALS.....	28,907	28,690

In addition there were investigations of accidents and the usual visits, office calls and conferences incidental to inspections.

The number of orders issued relating to various requirements of The Factory, Shop and Office Building Act totalled 11,050 as compared with 17,017 during the previous year.

Employees in the above-visited industries, mercantile establishments and office buildings number 494,983, classified as follows:

Fiscal years	Males over 16	Males 14-16	Females over 18	Females 14-18	Totals	Children under 14 dismissed
1946	400,946	3,287	214,194	3,953	622,380	238
1947	339,665	1,386	151,840	2,092	494,983	73

WEEKLY HOURS OF LABOUR

Male Employees

Hours	Up to 49	50-53	54-57	58 and over	Totals
Firms 1946	10,075	1,011	204	633	11,923
Firms 1947	11,067	362	261	312	12,002
Employees 1946 . . .	357,591	18,902	7,911	11,551	395,955
Employees 1947 . . .	312,321	12,336	6,560	3,767	334,984

Female Employees

Hours	Up to 49	50-53	54-57	58 and over	Totals
Firms 1946	8,152	155	42	94	8,443
Firms 1947	8,244	124	37	29	8,434
Employees 1946 . . .	201,562	5,712	1,912	5,081	214,267
Employees 1947 . . .	144,411	3,594	1,196	1,952	151,153

Total Employees

Hours	Up to 49	50-53	54-57	58 and over	Totals
1946	559,153	24,614	9,823	16,632	610,222
1947	456,732	15,930	7,756	5,719	486,137

Also 499 firms employ 6,067 males and 364 firms employ 2,779 females working approximately fifty hours a week.

VIOLATIONS

Violations of the acts in the enforcement of which the inspectors have a responsibility were reported as follows:

	1946	1947
The Adolescent School Attendance Act	44	1
The Minimum Wage Act	2,394	3,095
The Operating Engineers Act	145	152
The Steam Boiler Act	5
TOTALS	2,588	3,248

Violations of The Minimum Wage Act were chiefly cases of carelessness on the part of employers in neglecting to keep minimum-wage cards posted in their establishments.

COMPLAINTS

One hundred and twenty-seven complaints were received during the fiscal year. Upon investigation, sufficient grounds for complaint were found in seventy-three cases, insufficient grounds in fifty-two cases and two cases concerned matters not under the jurisdiction of the Factory Inspection Branch. Some investigations covered more than one complaint. Subjects of complaint were as follows:

	1946	1947
Adolescents	8	17
Child labour	14	14
Dust	3	8
Elevators	6	6
Fire hazards	6	3
Fumes	9	8
Guarding machinery	6	3
Lack of heat	13	12
Long hours	15	13
Lunch period	3	..
Lunch- and dressing-rooms	2	1
Miscellaneous	23	17
Multiple	5	1
Exits	3	1
Sanitation	11	5
Toilet accommodation	16	14
Ventilation	3	4
Totals	146	127

PROSECUTIONS

Three charges were laid against one employer under section 29 of The Factory, Shop and Office Building Act for the employment of females in his restaurant later than 2 a.m. and convictions were recorded on each charge and fines assessed.

ACCIDENTS

During the year 10,977 accidents were reported to the Factory Inspection Branch as compared with 13,466 in 1946. Forty-two of the accidents proved fatal as compared with sixty-two for the preceding year, and 601 of the total accidents happened to female workers.

Fatalities were due to,—

Burns and scalds	3
Cranes and derricks	5
Elevators	1
Electricity	5
Engines and cars	1
Explosions	2
Falling substances	1
Falls	8
Jammed between articles	2
Belts, pulleys and shafting	3
Saw	2
Trucking	1
Other machinery	4
Miscellaneous causes	2
Fumes	2
Total	42

EXPLOSIONS

Fifty-eight explosions were reported during the year, two of which took place at the close of the previous fiscal year. Fifty-six of these explosions caused injuries to seventy-one employees, and injuries proved fatal to two employees.

Explosions causing injuries were as follows:

- March 13, 1946... Entering bar into furnace the billet exploded in middle.
- March 12... Holding gauge on acetylene torch when it exploded.
- April 1... Tube connections on welder exploded.
- April 2... Pulled the plug in the exhaust pipe to examine for fire, and an explosion occurred.
- April 2... Bottle of soft drink exploded.
- April 3... When starting motor, carburetor back-fired causing slight explosion.
- April 6... Explosion occurred while hardening steel shanks.
- April 7... High-pressure cylinder on compressor blew off.
- April 15... Molten metal pouring from furnace into a tank of water caused a series of explosions.
- April 22... Filling gas generator with carbide in gas house, where gas for acetylene welding is made, caused an explosion.
- April 26... Explosion when cleaning and tightening square "D" switches.
- May 2... Bottom of fuel tank feeding hardening furnace blew off.
- May 17... Gasoline tank exploded while being welded to seal leaks.
- June 7... Firing cap of shell exploded.
- June 13... Dip tube froze, stuck rod into it and in doing so metal exploded.
- June 16... Dust exploded in fire box of boiler.
- June 18... Torch back-fired and flame travelled into hose and exploded at connections.
- June 26... Explosion occurred when furnace burnt out.
- June 27... When filling lubricator it blew back.
- June 28... Lacquer can exploded when being burnt.
- July 2... Fumes inside creosote tank exploded when welding tank.
- July 3... Gas burner exploded when it was lit.
- July 20... Gas oven exploded.
- July 30... Bottle exploded in pasteurizer.
- August 1... Relighting blow torch caused explosion.
- September 10... Minor explosion in fuel oil burner.
- September 12... Bottle exploded.
- September 19... Fumes of ether at gas boiler caused explosion.
- September 30... Core exploded while metal was being poured.
- October 5... Explosion occurred when attempting to relight torch from previous cut.
- October 9... Bottle exploded in pasteurizer.
- October 12... Slake lime exploded.
- October 15... Dynamite exploded.
- October 21... Iron exploded when being emptied into pit.
- October 25... Spray painting machine exploded.
- October 31... Tank exploded.
- November 14... Gas backed up from wash-box and exploded when it hit the air.
- November 15... Heat from grill exploded gas accumulations.
- November 18... Oxygen valve on torch exploded.
- November 24... Molten steel in mould exploded.
- November 26... Chemicals exploded.
- December 2... Accumulation of steam on ladle caused explosion.
- December 6... Moisture on the metal caused explosion.

EXPLOSIONS—Continued

- December 9. Acetylene cutting torch caused explosion.
- December 29. Water in steam line driven ahead and when it struck separator leading to harlem drive separator exploded.
- January 21, 1947. While poking blow in furnace a slight explosion occurred.
- February 3. Water got into mould and exploded.
- February 4. While moulding metal it exploded.
- February 4. Acetone instead of alcohol used in burner caused an explosion.
- February 5. Lighting gas drum, and threw lighted piece of paper in drum, causing an explosion.
- February 11. Explosion occurred inside the tumbler filled with overalls in the process of drying.
- February 13. Explosion occurred in the laboratory.
- February 17. Bottle exploded.
- February 24. Furnace was cold so in order to see struck a light and the gas exploded.
- February 25. Gas back-fired in open hearth furnace, causing an explosion.
- March 3. Checking oil on a bus, pulled dip stick out and it exploded.
- March 4. Explosion occurred when two kettles of varnish were being reduced with petroleum solvents.
- March 19. Tap on pile of metal exploded.

BOARD OF EXAMINERS OF OPERATING ENGINEERS

CHAIRMAN: JOHN SHARP

MEMBERS OF THE BOARD: W. J. SCOTT, A. L. LACEY

The Board of Examiners, in accordance with the requirements of subsection 3 of section 2 of The Operating Engineers Act, presents the thirty-eighth annual report of the activities of this Branch of the Department of Labour for the fiscal year ending March 31, 1947.

The net revenue of \$37,464.35, shown in the attached statement, is the largest in the history of the Branch, being an increase of \$3,654.15 over the fiscal year 1946. It represents an increase in revenue derived from the sale of text books and fees collected for examinations, certificate renewals and plant registrations.

The demand for engineering text books sold by the Department shows a continuous growth, the net revenue for the year from this source being \$5,451.

During the year 1,184 applications from candidates for examination and 573 applications for re-examination were submitted for the approval of the Board. Ninety-four of the applications for examination were rejected as they did not comply with the requirements of the regulations.

A total of 3,402 candidates wrote examinations, 1,840 at the Toronto office and 1,562 at outside centres, which is the largest number to be recorded within a single year. This is an increase of 920 over the preceding twelve months. While the percentage of examination failures is slightly higher, a substantially greater number obtained certificates than ever before for a corresponding period.

The number of certificates issued was 18,815 of which 18,486 were to operating engineers for the current year and 329 were plant registration certificates. The figure for plant registrations represents an increase of forty-four over the preceding year.

Students from the Ontario Training and Re-establishment Institute have shown a high degree of proficiency due to their specialized training and illustrated by the results they obtained when writing the regular examinations set by the Board. One hundred and forty wrote examinations and obtained a sufficient percentage to be eligible for certificates.

The inspector for the Branch made 731 inspection calls during the year. Cases of violation, numbering 250, were reported and proceedings instituted in each case for adjustment to comply with the regulations.

The assistance and co-operation of the operating engineers have aided appreciably in enforcing the regulations and the Board takes this opportunity to express its grateful acknowledgment.

REPORT OF REVENUE FOR FISCAL YEAR

APRIL 1, 1946, TO MARCH 31, 1947

BOILER INSPECTION BRANCH

CHIEF INSPECTOR: J. N. BRIGGS

The Boiler Inspection Branch administers The Steam Boiler Act for the purpose of promoting greater safety to life and property by securing concerted action and maintaining uniformity in the construction, installation and inspection of steam boilers and other pressure vessels, and their appurtenances.

In the administration of this Act the results have been more than anticipated during the fiscal year ending March 31, 1947. The thirty-fourth annual report covering this period reflects the trend of activities exceeding those of the previous year, 1946. For comparison the following figures indicate the percentage of increase for the fiscal year 1947:

Monies transferred to the Treasury Department	15 per cent
Designs and specifications surveyed and registered	23 per cent
Inspections under The Steam Boiler Act and regulations	11 per cent
The Factory, Shop and Office Building Act	8 per cent
Vessels accepted on affidavit of manufacturer without shop inspection	68 per cent
Examinations of welding operators	26 per cent

The year's survey of 840 designs delineating the construction of boilers and pressure vessels, including plans of installations, represented the handling and stamping of over 3,300 blueprints. There were also sixty-nine designs rejected or returned to manufacturers for revision.

The replenishment of manufacturers' steel stocks for post-war production increased the number of shop inspections of boilers and pressure vessels during construction. It also had the effect of increasing the number of vessels accepted on affidavit of the manufacturer without shop inspection.

An increase is shown in the annual inspections of uninsured boilers and pressure vessels, although this branch of work was apparently affected by the greater effort expended in meeting the demands made by new construction.

Owing to the number of small firms entering into the production of small welded boilers and tanks for the first time, there has been a decided increase in plants visited and welding procedure established. The work involved in connection with qualifying welding procedures and operators for the calendar year ending December 31, 1946, is summarized as follows:

Total number of firms visited	395
Increase over calendar year ending December 31, 1945	152 per cent
Total number of welding operators examined	1,465
Increase over calendar year ending December 31, 1945	26 per cent
Number of operators examined in,-	
Metallic arc process	1,289
Operators qualified	858
Operators failed	431
Number of operators examined in,-	
Oxygen-acetylene process	176
Operators qualified	78
Operators failed	98

During the month of August the resignation of one inspector was accepted. It is with regret that the death of Mr. N. S. Smith is reported. He gave many years of valued service on the inspection staff.

For the purpose of promoting uniform boiler laws throughout Canada the Canadian Steel Boiler Institute held a conference in Winnipeg, Manitoba, on January 20 and 21, 1947, which the chief boiler inspectors of the provinces and insurance interests attended. All discussions were approached in a co-operative spirit and one outstanding point given special consideration was the proposal to establish a central board for surveying designs and specifications of boilers and pressure vessels under the administration of the Canadian Standards Association, Ottawa. Final registration or rejection of the design will be made by the province in which the boiler or pressure vessel is to be installed.

The following investigations were made of explosions during the fiscal year:

An exploding H. R. T. boiler, 66-inch diameter by 15-foot 9-inch length, demolished a one-floor brick building of a textile mill in Appleton at 4 a.m. on April 16, 1946. Investigations revealed that the blow-down pipe developed leakage through corrosion of threads in the coupling which lowered the water level in the boiler sufficiently to cause overheating. The boiler, estimated forty years old, ruptured at the longitudinal seam of the centre course. Insurance and annual inspections had been maintained.

Oil fuel storage tank used in connection with a heat treating furnace in Toronto exploded on May 2, 1946. The spraying oil became ignited by the furnace and the resulting fire caused property damage. Excess air pressure caused by a defective pressure regulator blew out the head of the tank. This accident may have been avoided if protection had been afforded by installing a pressure relieving device on the tank as required by regulations.

Interference with a safety valve by some person or persons unknown was apparently the cause of a boiler failure on March 2, 1946, in a laundry located in the Kirkland Lake district. The damage caused by the explosion was confined to the water legs of the boiler and the building. Examination of the safety valve after it had failed to open under test pressure of 150 pounds showed that the spring had been fully compressed by the adjusting screw.

An investigation made on May 6, 1946, disclosed the fact that over-pressure caused the separation of a concave to pressure head from the shell of a water heater located in a country club in Essex County. The heater originally designed for a maximum working pressure of thirty pounds was improperly connected to a water system of seventy-pound pressure. The explosions resulted in property damage only.

Accumulation of gas in furnace of a water tube boiler located in an oil refinery in Toronto resulted in an explosion that wrecked the entire brick setting. The boiler itself was not damaged. The cause of gas accumulation was undetermined as every precaution had been taken to ventilate the furnace before lighting up.

Three men were injured on July 2, 1946, when a creosote tank in Sudbury blew up after welding repairs were commenced. The neglect to steam out the tank before commencing to weld was the cause of the explosion. The tank was wrecked beyond repair. There was other property damage.

Fire flash in a cast iron after-cooler shell of a large compressed air system operating at one hundred pounds per square inch in Hamilton fortunately did not result in an explosion. The possible cause of the flash may be attributed to a collapsed tube permitting air pressure to force the circulating water out of the system. The resulting rise in temperature ignited vapours from the lubricating oil. Heat from the fire melted all the 50 three-quarter-inch brass tubes in the cooler.

Upon investigating a supposed explosion of an acetylene tank at Bala it was discovered that no pressure equipment had failed but due to sparks emanating from an acetylene torch and falling through open cracks in the floor of a garage, an explosion occurred which unfortunately resulted in the death of one man. It appears that a quantity of gasoline had previously been pumped out of old storage tanks and allowed to seep through the ground and under the floor of the garage.

In the month of December, 1946, a cast iron separator installed on a steam line in a paper mill located in the Port Arthur district exploded and caused fatal burns to an operating engineer. Apparently the steam had been shut off the line for a short time in order to make repairs and when turned on again the drain at the bottom of the separator, through not being opened, allowed the separator to fill with condensate. Water hammer caused the separator to rupture.

Responding to a report of a boiler explosion in a cleaning and pressing establishment, Kingston, the inspector discovered another case of furnace explosion caused through delayed ignition in an oil burning system. The boiler was not damaged by the explosion.

SUMMARY OF WORK FOR FISCAL YEAR ENDING MARCH 31, 1947

Drawings and specifications surveyed, registered and re-registered:

	Designs	Fees
Boilers, unfired pressure vessels, boiler accessories and power plant piping.....	840	\$ 4,955.00

New boilers and pressure vessels:

	Inspections	Fees
Boilers.....	1,415	
Unfired pressure vessels.....	1,469	
Totals.....	2,884	\$16,718.50
Travelling expenses.....		\$ 377.60
Qualification tests of welding operators, expenses.....		\$ 2,110.00
Pressure piping installations.....	39	\$ 295.00
Travelling expenses.....		331.45

Used boilers and pressure vessels inspected:

Boilers.....	847	
Unfired pressure vessels.....	382	
Totals.....	1,229	\$ 6,965.50
Second and final inspections.....	3,385	
Travelling expenses.....		\$ 3,472.80

Certificates issued:

	Number
Class A—new boilers and unfired pressure vessels.....	2,041
Class B—used boilers and unfired pressure vessels.....	963
Class C—low pressure boilers accepted by affidavit.....	541
Class D—pressure vessels accepted by affidavit.....	2,370
Class E—boilers under 3 H.P. accepted by affidavit.....	80
Duplicate certificates.....	19
Total.....	6,014

Annual inspections:

	Inspections	
Uninsured boilers.....	2,975	
Uninsured unfired pressure vessels.....	4,760	
	<hr/>	
Total.....	7,735	
Fees.....		\$20,369.50
Expenses.....		291.17
Certificates issued.....	3,482	
Fees for—survey and registration of designs.....		\$ 4,955.00
inspections of new boilers and pressure vessels.....		16,718.50
pressure piping installation inspections.....		295.00
inspections of used boilers and pressure vessels.....		6,965.50
heating boilers accepted by affidavit.....		1,082.00
pressure vessels accepted by affidavit.....		4,740.00
boilers under 3 H.P. accepted by affidavit.....		160.00
duplicate certificates.....		2.00
transfer scale for tanks.....		1,193.00
regulations.....		10.50
Travelling expenses.....		4,181.85
Qualification tests of welding operators—expenses.....		2,110.00
Fees for annual inspections.....		20,369.50
Expenses for annual inspections.....		291.17
		<hr/>
Total.....		\$63,074.02
Total amount of monies transmitted to the Treasury of Ontario.....		\$62,727.91

CONCILIATION, MEDIATION AND ARBITRATION

CHIEF CONCILIATION OFFICER: LOUIS FINE

CONCILIATION OFFICERS: JAMES HUTCHEON, G. L. FENWICK

The tenth annual report of the Conciliation, Mediation and Arbitration Branch of the Department of Labour for the fiscal year ending March 31, 1947, shows an all-time record for the number of cases handled.

The conciliation staff of the Province of Ontario consists of the Chief Conciliation Officer and two conciliation officers. During the fiscal year three federal labour relations officers co-operated with this Branch in carrying out the various duties coming under its jurisdiction.

The duties of the officers of this Branch include all matters relating to,-

- (a) conciliation, mediation and arbitration;
- (b) acting as referees and returning officers in plant elections as directed by the Ontario Labour Relations Board;
- (c) making arrangements for and acting as returning officers in plant elections held with the consent of all parties;
- (d) investigating and reporting on all cases referred to this office by the Regional War Labour Board for Ontario with reference to wages, hours of work, etc.; and
- (e) conducting conferences under The Industrial Standards Act.

CONCILIATION

During the fiscal year 185 conciliation cases were referred to this Branch. In seventy-four of these cases certification had been granted to the bargaining committees of various unions but the parties were not able to reach an agreement within the stipulated thirty-day period as provided in P.C. 1003. In twenty-nine of these cases the conciliation officer appointed was able to affect a satisfactory agreement between the parties concerned. One case is still pending and in the other forty-four cases boards of conciliation were recommended and established. The conciliation officers' reports show that in all of these forty-four cases the parties were in disagreement in five to fifteen clauses in the agreements being considered. As a result of meeting with the conciliation officer many of the points at issue were settled, which reduced and clarified the number of issues finally placed before the board of conciliation.

Fifty-two cases were handled under P.C. 4020 where it was alleged that employees had been dismissed for union activity or union membership. As a result of the investigations made and evidence produced commissioners were appointed in twenty-six of these cases and made their report direct to the Minister of Labour.

In eight of the remaining twenty-six cases the employees were immediately reinstated and wages paid in full for time lost. The settlement in the other eighteen cases falls under many categories. Some were withdrawn and others, as a result of mediation, were settled, the employees rehired and the time lost counted as a suspension or, in a few cases, the conciliation officer reported that he had not been presented with sufficient evidence to warrant the appointment of a commissioner.

The other sixty cases came direct to this office without reference to any Order-in-Council or board and were settled satisfactorily. In approximately forty cases this office had advance notice of strikes pending either through the employer or the union and in some cases both parties asked for the service of an officer. Meetings were immediately arranged and satisfactory agreements signed. In the other twenty cases where no strike action was indicated, officers were requested to meet with the parties and old agreements were renewed.

ARBITRATION

Nearly every agreement signed between union and management provides for arbitration as the final step of the grievance procedure and for the appointment of an arbitrator by the Minister. During the fiscal year the Minister was called upon to make a number of such arbitration appointments. However, many agreements do not contain this provision and it has been necessary for the officers of this Branch to act in this capacity upon the joint request of employers and employees. During the year thirty-two cases were handled, involving 110 grievances. In all of these cases the decision of the arbitrator has been accepted. Most of the complaints coming to arbitration deal with the interpretation of a clause or clauses in the agreement and come under categories of seniority, promotion, classification, discipline and plant rules.

It is of interest to note, in considering the scope of arbitration proceedings, that for the first time in the history of this Department an agreement was reached between a company and a union which, while it contained the provisions that all employees must become members of the union and all new employees become members within a certain period, provided that any employee employed at the time the agreement was signed, who for conscientious reasons claimed he could not become a member of the union, was entitled to place his case before the Chief Conciliation Officer of the Province of Ontario who would decide whether his objections were valid or not and the decision of this officer would be accepted as final. One such case has been heard under this agreement.

PLANT VOTES

Forty plant votes were conducted during the year. Thirty-two came from the Ontario Labour Relations Board and eight as a result of a joint request from the employer and the union. It is now a matter of record that agreements were completed in all of these cases. Six thousand and seven hundred and ninety-four employees were involved in these plant votes.

REGIONAL WAR LABOUR BOARD FOR ONTARIO AND INVESTIGATIONS

One hundred and thirty-four investigations were made during the year. One hundred and one of these assignments were from the Regional War Labour Board for Ontario, and while this is a decrease from last year, the items referred to this Branch were of a more complicated nature and involved visits to plants in all parts of the Province. Investigations were made and reports submitted dealing with wages and hours of work. Twenty-seven reports were requested by the Minister's or the Deputy Minister's office and six by the federal Department of Labour. All these assignments were duly completed.

STRIKES

The services of this Branch were requested in forty-four strikes which involved 19,379 employees and resulted in a time loss of 482,245 working-days. In checking the records of settlement it would appear that there was a definite indication that in approximately ten per cent of these cases matters were settled equally in favour of employers and employees. In the other ninety per cent of the cases with the use of conciliation and mediation the parties concerned ultimately gave way on various points and, when the final agreement was made, it was impossible to credit one or the other with achieving their aims.

THE INDUSTRIAL STANDARDS ACT

Forty-three conferences were held during the year under The Industrial Standards Act and schedules were agreed to and approved by the Minister of Labour in thirty-eight cases. Three schedules are still pending and in two cases schedules were not made effective. One of these two cases was refused because of the disagreement in the trade itself with respect to the definition of the industry and the other because of the size of the zone and the conditions therein.

One investigation was held under the terms of the Act in the retail gasoline service industry, Windsor. The industries covered by these conferences include barbering, bricklaying and stonemasonry, carpentry, common labourers construction, electrical repair and construction, retail gasoline service, logging, painting and decorating, plastering, plumbing and heating, sheet-metal workers' construction and taxicab.

OFFICE WORK

The volume of work handled in this office increases year by year. Enquiries are made daily to the office by telephone or personal calls on matters in dispute. As a result of these enquiries the officers of this Branch have been able to advise, counsel and assist many employers and employees in connection with their problems. It has been necessary during the year to see that at least one of the officers remains on duty in Toronto to handle matters of this type.

ONTARIO LABOUR RELATIONS BOARD

CHAIRMAN: HIS HONOUR JUDGE IAN M. MACDONELL

This report of the Ontario Labour Relations Board covers the fiscal year ending March 31, 1947. The Board carried on throughout the year within its allocated sphere of jurisdiction its administration of the Wartime Labour Relations Regulations. On January 30, 1947, the Dominion Government passed Order-in-Council P.C. 302 amending and enlarging the regulations in several substantive respects (effective February 15, 1947), revoking Order-in-Council P.C. 4020 (effective February 15, 1947) and revoking Schedule A to the regulations and the sections of the regulations having reference thereto (effective March 31, 1947). The latter provision had the effect of cancelling the category of enterprises usually referred to as "war industries", leaving only two categories corresponding generally to the respective legislative jurisdictions of the Dominion and the Province. The amending provisions of P.C. 302 were not made applicable by the Province to employers and employees whose relations with each other fall within the legislative jurisdiction of the Province. The Province has, since the end of the fiscal year, enacted legislation providing for the application of the regulations throughout the sphere of provincial jurisdiction.

The first changes in the personnel of the Board since the commencement of its activities early in 1944 took place this fiscal year. On February 13, 1947, the resignation of the Chairman, Professor Jacob Finkelman, was accepted by the Minister. An evaluation of the contribution of Professor Finkelman to the cause of peaceful labour relations in the Province first as Registrar of The Labour Court of Ontario and, later, as Chairman of the Ontario Labour Relations Board will not be attempted in this report. The Board, however, takes this opportunity to record its recognition and appreciation of the high quality of the service rendered by Professor Finkelman during his tenure of office as Chairman of the Board. Professor Finkelman was succeeded by His Honour Judge Ian M. Macdonell, a Judge of the County Court of the County of York, who had been serving as Chairman of the recently-disbanded Regional War Labour Board for Ontario.

Mr. C. E. Shumaker of the Goodyear Tire and Rubber Company Limited, one of the original employer representatives on the Board, resigned on January 31, 1947. His colleagues on the Board wish to express their high regard for the sound judgment which characterized his work and their regret at his withdrawal. Mr. Shumaker was succeeded by Mr. W. N. Bourke of Modern Methods.

The remainder of the personnel of the Board, namely W. J. Corbett, G. R. Harvey, E. J. Hopcraft, R. W. Teagle and H. J. Padget, was unchanged at the end of the fiscal year.

The Board held 85 sessions during the year. The "average board member" attended 76 sessions. On April 17, 1946, Mr. P. M. Draper, assistant to the Chairman, was appointed Alternate Chairman of the Board, and presided at board hearings and executive sessions in the absence of the Chairman. The volume of business before the Board having continued to mount steadily during the year, the need for a second examiner became apparent and the appointment of Mr. J. M. Flannery followed in November, 1946. Since then it has been possible to refer a greater number of certification cases for preliminary inquiry and report and 400 cases were so referred during the year.

Seven hundred and forty-four applications of all types were filed with the Board during the year, an increase of 232 over the previous fiscal period. The figures comprised of 627 petitions for certification, 96 requests for the appointment of a conciliation officer, 18 applications for leave to institute a prosecution, 2 petitions for establishment of a grievance procedure and 1 petition requesting the appointment of an arbitrator.

Trades and Labor Congress of Canada—American Federation of Labor affiliates were concerned in 348 petitions for certification, Canadian Congress of Labour—Congress of Industrial Organizations affiliates in 282 petitions, Canadian Federation of Labour affiliates in 11 petitions and unaffiliated employees organizations in 77 petitions. Eighty-eight of the certification cases

involved a contest between two or more trade unions or employees' organizations. Jurisdictional disputes between Trades and Labor Congress of Canada—American Federation of Labor affiliates and Canadian Congress of Labour—Congress of Industrial Organizations affiliates occurred in 19 cases which came before the Board. Petitions for certification granted numbered 378, withdrawals 99, dismissals 133 and transfers to the Wartime Labour Relations Board (National), 1. Of the 378 certificates granted, 228 went to Trades and Labor Congress of Canada—American Federation of Labor affiliates, 143 to Canadian Congress of Labour—Congress of Industrial Organizations affiliates and 7 to unaffiliated employees' organizations. Representation votes were taken in 112 of the certification cases which were finally disposed of during the fiscal year as a result of which 76 certificates were issued, 34 petitions were dismissed and 2 were withdrawn.

Ninety-six requests for the appointment of a conciliation officer were filed with the Board, 31 by Trades and Labor Congress of Canada—American Federation of Labor affiliates, 64 by Canadian Congress of Labour—Congress of Industrial Organizations affiliates and 1 by a Canadian Federation of Labour affiliate. Of the total, 78 were referred to the Minister, 8 were dismissed, 5 were withdrawn and 1 was transferred to the Wartime Labour Relations Board (National).

Petitions for leave to prosecute were filed in 18 instances. Leave was granted in 4 cases, 4 were dismissed and 12 were withdrawn.

Two petitions for the establishment of a grievance procedure were received and in each case the request was granted.

REGIONAL WAR LABOUR BOARD FOR ONTARIO**CHIEF EXECUTIVE OFFICER: J. B. METZLER**

The activities of the Regional War Labour Board for Ontario continued unabated from the beginning of the fiscal year 1946-47 until December 1, 1946. On that date the Wartime Wages Control Order, P.C. 9384, as amended, was revoked by the Dominion Government and from then until the end of the fiscal year the Board was engaged in cleaning up the work which remained outstanding.

During the five-year period in which wage control was effective the Regional War Labour Board for Ontario disposed of almost 60,000 applications.

At its peak the staff of the Board reached a total of thirty-four. It is interesting to note that, with few exceptions, the members of the staff have found new employment or returned to their former activities.

In large measure the success of the Board in discharging its functions was based on the close and whole-hearted co-operation of the representatives of labour and management on the Board.

THE INDUSTRY AND LABOUR BOARD

CHAIRMAN: ERIC BILLINGTON

MEMBERS: E. G. GIBB, J. F. NUTLAND

The Industry and Labour Board administers The Hours of Work and Vacations with Pay Act, 1944, The Industrial Standards Act, The Apprenticeship Act and The Minimum Wage Act.

THE HOURS OF WORK AND VACATIONS WITH PAY ACT, 1944

This Act provides that in any industrial undertaking the working hours of an employee shall not exceed eight in the day and forty-eight in the week and that every employee shall be given a vacation of at least one week with pay after each year of employment.

REGULATIONS—EXEMPTIONS

Regulations made under the Act apply to every establishment and undertaking and all work in or about any business, trade or occupation except to members, students and apprentices of certain professions, the business of funeral directing and embalming, farming and domestic service, and to the hours of work of employees of municipal fire departments, of steamship and railway companies, stevedores and others loading and unloading ships, persons working in grain elevators and persons employed in commercial fishing.

REGULATIONS—OVERTIME

An employer may provide, with the approval of the Board, for overtime of not more than twelve hours a week for each employee in the case of engineers, watchmen, firemen, shippers and other persons engaged in non-productive work, and in the case of all other employees, overtime of not more than one hundred hours in each calendar year for each employee.

EMERGENCIES

Overtime may be worked by employees in an industry in cases of accident or work urgently required to be done to machinery or plant which cannot be completed during the eight-hour day or the forty-eight-hour week and which, otherwise, would interfere with the ordinary working of the undertaking. Where work of this nature is undertaken the employer shall, within thirty days of the performance of the work, report it to the Board, stating the reasons therefor, and the emergency work so required shall not reduce the amount of overtime which may ordinarily be worked with the consent of the Board.

SPECIAL CIRCUMSTANCES

The Board may authorize overtime in respect of an industrial undertaking where the Board is satisfied that overtime work is necessary because of the nature of the work or the perishable nature of the raw material being processed.

VACATIONS WITH PAY

Every employee granted a vacation with pay under the Act shall be entitled to receive a minimum of two per cent of his total annual earnings.

Amendments to the Act passed at the 1947 session of the Legislature of the Province of Ontario, to come into force on June 1, 1947, authorize an employer to determine the period when each employee may take the vacation provided for by the Act but such period shall not be later than ten months after the conclusion of the working year. The amendments further authorize the making of regulations providing for the payment of vacation credits on a pro-rata basis to an employee who does not complete a year of employment with an industrial undertaking, for a system of vacation-with-pay credit stamps for use in such industrial undertakings as may be designated and also for the sale and redemption of such stamps

The amendments also provide that in addition to the penalty imposed on any employer for failure to grant a vacation with pay to any employee, the magistrate entering a conviction may order the employer to pay to such employee an amount equal to the pay he would have received for such vacation or the amount to which he would be entitled under the regulations.

CONSTRUCTION INDUSTRY

Employees engaged in the construction industry have received vacation credits on a pro-rata basis since July 1, 1944.

An employee who is employed for less than a year by an employer may obtain a vacation-with-pay stamp book from his employer, association of employees or from the Department of Labour at a charge of twenty-five cents.

The employer may purchase at any provincial savings office vacation-with-pay credit stamps in denominations ranging from one cent to one dollar and at the end of each working day, week or regular pay period he is required to affix these stamps in an amount equivalent to two per cent of each employee's total earnings during the working period to the employee's vacation-with-pay stamp book. In this manner the employer contributes his proper share of vacation pay of his employees and employees build up a vacation-with-pay credit in proportion to their earnings and irrespective of the number of employers for whom they have worked during the year.

On and after June 30 in each year employees may present their books at any branch of a chartered bank or provincial savings office and, upon proper identification, shall be entitled to receive the cash equivalent of the stamps contained therein.

Under this plan of vacation-with-pay credits for employees in the construction industry, the sale to employers in the industry of vacation-with-pay credit stamps to March 31, 1947, is as follows:

July 1, 1944, to March 31 1945.	\$ 377,236.20
April 1, 1945, to March 31, 1946.	969,366.62
April 1, 1946, to March 31, 1947.	1,465,139.63
	\$2,811,742.45
Total for period.	

During the same period 246,350 vacation-with-pay stamp books were sold to employees in the construction industry. The revenue from the sale of these books was \$61,587.50.

PROSECUTIONS

For contraventions of the provisions of The Hours of Work and Vacations with Pay Act, 1944, a total of \$1,675 has been levied by the courts.

GENERAL

During the fiscal year The Industry and Labour Board met numerous delegations representing employers and employees of almost every type of industry in respect to the administration of The Hours of Work and Vacations with Pay Act, 1944, The Industrial Standards Act, The Apprenticeship Act and The Minimum Wage Act.

THE INDUSTRY AND LABOUR BOARD
THE INDUSTRIAL STANDARDS ACT

The Industrial Standards Act provides a definite procedure for collective bargaining in any industry designated or defined by the Minister by providing a legal means for calling a conference of employers and employees in any industry in a pre-defined zone or zones. The conference may submit to the Minister in writing a schedule of wages and hours and days of labour and the Minister may approve of the schedule if, in his opinion, it has been agreed to by a proper and sufficient representation of employers and employees.

Upon the recommendation of the Minister an Order-in-Council may be passed approving that the schedule be in force during pleasure, or for a stipulated period not exceeding twelve months, within the designated zone and be binding upon the employers and employees in the industry, and also approving the date on which the schedule is to come into force. The schedule is then published in the Ontario Gazette under The Regulations Act, 1944.

During the fiscal year conferences were held under the Act to renew existing schedules in the following industries and zones:

INDUSTRY AND ZONE	DATE OF CONFERENCE	DATE SCHEDULE EFFECTIVE
Barbering:		
Barrie.....	December 11, 1946.....	(no schedule)
Brantford.....	May 17, 1946.....	July 11, 1946
Chatham.....	October 24, 1946.....	December 24, 1946
Cobourg.....	July 24, 1946.....	September 14, 1946
Fergus and Elora.....	August 6, 1946.....	October 15, 1946
Galt-Hespeler.....	August 7, 1946.....	October 15, 1946
Gananoque.....	June 11, 1946.....	July 30, 1946
Kitchener-Waterloo.....	April 24, 1946.....	June 18, 1946
Lindsay.....	June 24, 1946.....	August 13, 1946
Orillia.....	October 18, 1946.....	December 31, 1946
Paris.....	May 21, 1946.....	July 11, 1946
Port Hope.....	July 31, 1946.....	September 17, 1946
Prescott.....	October 16, 1946.....	December 24, 1946
St. Mary's.....	July 4, 1946.....	October 1, 1946
St. Thomas.....	May 22, 1946.....	July 23, 1946
Simcoe.....	April 17, 1946.....	October 29, 1946
Stratford.....	May 15, 1946.....	July 11, 1946
Bricklaying and stonemasonry:		
Ottawa.....	October 15, 1946.....	December 31, 1946
Carpentry:		
Ottawa.....	October 15, 1946.....	December 31, 1946
St. Catharines.....	August 14, 1946.....	October 15, 1946
Common labourers construction:		
Ottawa.....	October 15, 1946.....	December 24, 1946
Electrical repair and construction:		
London.....	January 28, 1947.....	April 22, 1947
Ottawa.....	October 16, 1946.....	December 31, 1946
Logging:		
Thunder Bay.....	June 24, 1946.....	(no schedule)

Painting and decorating:

Ottawa December 10, 1946 March 4, 1947

Plastering:

Ottawa October 15, 1946 January 21, 1947

Retail gasoline service:

Windsor February 21, 1947 (pending)

Taxicab:

Toronto November 5, 1946 December 31, 1946

Conferences were held to introduce new schedules in the industries and zones as follows:

INDUSTRY AND ZONE	DATE OF CONFERENCE	DATE SCHEDULE EFFECTIVE
Barbering:		
Aylmer	October 3, 1946	December 31, 1946
Tillsonburg	April 24, 1946	October 29, 1946
Carpentry:		
Guelph	May 15, 1946	July 23, 1946
Kenora-Keewatin	February 26, 1947	April 22, 1947
Orillia	May 14, 1946	September 3, 1946
Oshawa-Whitby	February 10, 1947	May 6, 1947
Sarnia	May 16, 1946	July 23, 1946
Painting and decorating:		
Guelph	March 13, 1947	May 6, 1947
Plumbing and heating:		
Belleville	October 17, 1946	January 21, 1947
Kitchener-Waterloo	December 12, 1946	February 25, 1947
Retail gasoline service:		
Brantford	August 19, 1946	(no schedule)
Sheet-metal workers' construction:		
Ottawa	October 16, 1946	December 31, 1946
Windsor	December 5, 1946	(pending)

Forty-one conferences were held from April 1, 1946, to March 31, 1947. With the exception of the logging industry, Thunder Bay zone, the barbering industry, Barrie zone, the sheet-metal workers' construction industry, Windsor zone, and the retail gasoline service industry, Brantford and Windsor zones, these conferences resulted in schedules under the Act.

PAYROLL ASSESSMENT OF INDUSTRIES

Under the Act, The Industry and Labour Board has designated the ladies' cloak and suit industry and the men's and boys' clothing industry as interprovincially competitive, and has approved provisions in the respective schedules regarding the collection of assessment from employers and employees. The purpose of this assessment is to provide revenue for the enforcement of the schedule.

ARREARS OF WAGES

Arrears of wages amounting to \$205.37 were collected from six employers and on instructions from The Industry and Labour Board were paid to the eight employees affected.

COURT CASES

During the fiscal year forty-two prosecutions for alleged violations of the Act were instituted as follows:

Plumbing and heating industry, Port Arthur—Fort William zone:

One employer was charged with violation of the schedule, found guilty and fined \$25.

Retail gasoline service industry, Toronto zone:

Seventeen employers and six employees were charged with violations of the schedule. Charges against three of the employers were withdrawn for lack of evidence. The remaining fourteen employers and six employees were found guilty as charged and fined a total of \$555.

Retail gasoline service industry, Windsor zone:

Eight employers and ten employees were charged with violations of the schedule. The charge against one employee was withdrawn and two other employees were found not guilty. Convictions were registered against the others and fines levied totalled \$380.

The total of all fines levied was \$960.

SCHEDULES IN FORCE

At the close of the fiscal year there were 119 schedules in force in Ontario under The Industrial Standards Act, as follows:

TRADES AND INDUSTRIES:	Number of schedules	Zone
(a) Schedules covering local zones:		
Baking.....	1	Ottawa
Barbering.....	62	Covering 119 municipalities
Bricklaying and stonemasonry.....	1	Ottawa
Bricklaying, stonemasonry and plastering.....	1	Galt
Building industry.....	1	Kitchener-Waterloo.
Carpentry.....	20	Belleville, Brantford, Brockville, Cornwall, Galt, Goderich, Guelph, Kirkland Lake, Kitchener, Ottawa, Owen Sound, Orillia, Peterborough, Port Arthur-Fort William, Sarnia, St. Catharines, St. Thomas, Sault Ste. Marie, Timmins, Windsor
Coal.....	1	Toronto
Coal hoisting.....	1	Toronto
Common labourers construction.....	2	Ottawa, Windsor
Electrical repair and construction....	5	Kingston, Kirkland Lake, London, Ottawa, Windsor
Painting and decorating.....	5	Hamilton, Kingston, Kitchener, Ottawa, Oshawa-Whitby
Plastering.....	2	Ottawa, Toronto
Plumbing and heating.....	8	Belleville, Hamilton, Kitchener, Ottawa, Port Arthur-Fort William, St. Thomas, Township of Teck, Windsor
Retail gasoline service.....	2	Toronto, Windsor
Sheet-metal workers' construction....	1	Ottawa
Soft furniture.....	1	Toronto
Taxicab.....	1	Toronto
(b) Schedules covering Ontario zone:		
Brewing.....	1	
Hard furniture.....	1	
Ladies' cloak and suit.....	1	
Men's and boys' clothing.....	1	
Total.....	119	

THE INDUSTRY AND LABOUR BOARD

APPRENTICESHIP BRANCH

DIRECTOR OF APPRENTICESHIP: FRED J. HAWES

The past fiscal year was one of increased opportunities and responsibilities, there being a large increase in the registration of apprentices and a very large number of placements of discharged members of the Armed Forces in trades designated under The Apprenticeship Act.

BUILDING TRADES

The increased registration of apprentices in building trades for 1946 and 1947 created larger school-training classes and in January, 1947, there was the largest group of apprentices ever to be provided with school training. In 1946 there were 513 building-trade apprentices in school whereas in 1947 accommodation was provided for 719 apprentices. To take care of the increased number of apprentices eligible for school training, more accommodation was obtained at rehabilitation training centres. The greatest number was trained in Toronto and Hamilton trade-training centres, but additional classes were provided in the Central Technical School and the Northern Vocational School, Toronto. The opportunity to use rehabilitation training centres provided more complete course of instruction and the training classes held during January and February, and March and April were most successful. Boys in the second year of the term of apprenticeship attended training classes during January and February, and first-year boys reported for March and April classes. At the close of the training periods prizes were distributed to successful students. Trade unions, employers' and employees' organizations and supply houses donated the prizes and their representatives attended the presentation ceremonies.

The Provincial Advisory Committee for Building Trades in considering the importance of training a sufficient number of apprentices for all building trades realized the difficulty to provide school training for the increased number during the winter months only. To place before the Government for immediate consideration the necessity of training establishments being available where trade training could be given throughout the year, on February 17, 1947, the committee met the Honourable Charles Daley, Minister of Labour, and the Honourable D. R. Michener, Provincial Secretary and Acting Minister of Education, and representatives of the Department of Education. The committee explained the trade-training classes were now far beyond the experimental stage and were a most important development in the industrial life of Ontario. Since the war, trade-training centres have been established for training discharged members of the Armed Forces, which project has been most successful and has provided basic trade training for a large number of men. This training will be completed in the near future and the committee urged the Ministers of Labour and Education that one or more of these fully-equipped training establishments, including trained and experienced personnel, should continue to operate. The steady production of skilled mechanics, so badly needed now, depends upon the opportunities provided for training young men. Instruction in trade-training schools and experience on the job are co-related to produce a well-trained, skilful mechanic.

The trade-training programme conducted by this Branch in co-operation with the federal Department of Veterans Affairs has developed according to plan and a great many discharges have completed school training and have been placed in employment for additional training and experience. Finding employment for so many partially trained men has presented difficulties but with the co-operation of employer organizations and trade unions 1,749 men have been placed in building trades. Now that materials are available in larger quantities the building programme for the Province has expanded which has enabled the rehabilitation section of the Branch to find employment for trainees.

PROVINCIAL ADVISORY COMMITTEE FOR THE BUILDING TRADES

The Provincial Advisory Committee for the Building Trades supervised the placement in building trades of those released from rehabilitation training centres. The return to Canada of the discharged members of the Armed Forces had been accomplished more rapidly than was anticipated with the result that trainees were entering trades in greater numbers during a shorter period. Placement in employment to provide additional training and experience became increasingly difficult. The number of trainees and apprentices who may be employed in trades at one time is limited. It is impossible to teach efficiently or provide favourable opportunities when the number of those learning a trade is greater than may be absorbed by the trade. While it was most desirable that discharges should be returned to civilian occupation quickly, the speed of demobilization complicated the training and placement of these persons. The rehabilitation programme and the large increase in apprentice registration required the committee to meet monthly to discuss all matters in respect to trade training in school and on the job.

The personnel of this committee is as follows:

CHAIRMAN: JOSEPH M. PIGOTT

MEMBERS: Employers' Representatives

H. J. Ball
J. Kenyon
H. C. Nicholls
P. C. Mansell
E. F. Longfellow

Employees' Representatives

A. J. Crawford
Cecil M. Shaw
John W. Bruce
A. Cooper
William Jenoves

REPRESENTING THE DEPARTMENT OF EDUCATION: A. M. Moon, Assistant Director of Vocational Education

SECRETARY: FRED J. HAWES

MOTOR VEHICLE REPAIR TRADE

The amendment made in 1944 to the regulations governing the Motor Vehicle Repair Trade has increased the number of apprentices to 923 and those holding certificates of qualification to 16,358. These numbers are in addition to the 1945 ex-service men who received basic training in rehabilitation training centres and have been placed in employment for additional training and experience. These discharges received two years' credit on their term of apprenticeship for school training. In addition to trainees placed in employment hundred of discharges with experience in the trade had their qualifications evaluated and received full credit.

PROVINCIAL ADVISORY COMMITTEE FOR THE MOTOR VEHICLE REPAIR TRADE

The Provincial Advisory Committee for the Motor Vehicle Repair Trade has met on numerous occasions during the year and has expressed appreciation for the co-operation of the Department of Highways. The committee is of the opinion that regulations should be amended and systematized school training should become an important part of apprenticeship training in the trade. The personnel of the committee is as follows:

CHAIRMAN: FRED J. HAWES

MEMBERS: Employers' Representatives

Howard B. Moore
J. L. Stewart
H. W. Harper
George Beattie
E. Wadham
W. Forsyth
J. A. Hearn

Employees' Representatives

John Munro
William Farley
Charles Lambert
D. Lyons
R. D. Salmond
F. Lehmann

BARBER TRADE

The Industry and Labour Board has met several delegations representing barbers' organizations which repeated their request for compulsory certificates of qualification.

Sufficient numbers of apprentices have not entered this trade to maintain an adequate supply of capable replacements. During the fiscal year only four apprentices were registered. The trade relies on barber schools for its supply of competent operators. There is only one civilian barber school in Ontario which trains approximately fifty barbers a year which is not enough. Rehabilitation centres have trained a large number of ex-service men. One hundred and ninety-two have passed through the schools and have been placed on the job for additional experience. If it were not for men trained in rehabilitation schools there would be a shortage of barbers. Therefore, the Board did not give favourable consideration to the petition for compulsory certificates of qualification.

PROVINCIAL ADVISORY COMMITTEE FOR THE BARBER TRADE

The personnel of the Provincial Advisory Committee for the Barber Trade is as follows:

CHAIRMAN: FRED J. HAWES

MEMBERS: Employers' Representatives

C. D. Stevenson
L. J. McKerral
Otto Maluske

Employees' Representatives

George Macdonald
P. C. Hollier
William Craig

HAIRDRESSING TRADE

During the year the thirteen hairdressing schools in the Province were filled to capacity and practically all the graduates found employment as hairdressers. Students examined totalled 1,173 and of this number 1,073 were successful in passing. A large number of men and women enrolled in the course for hairdressers at the rehabilitation training centres. Three hundred and eighty-three have completed their training and have been placed in the trade.

The large number of persons registered in civilian schools in addition to those in rehabilitation schools indicates that the trade will be adequately supplied with replacements.

PROVINCIAL ADVISORY COMMITTEE FOR THE HAIRDRESSING TRADE

The Provincial Advisory Committee for the Hairdressing Trade continues to meet on call. The personnel of this committee is as follows:

CHAIRMAN: FRED J. HAWES

MEMBERS: Employers' Representatives

W. O. Wiegand
J. D. Adams

Employees' Representatives

Jean McKay
G. Duncan

REHABILITATION

The evaluation of experience, the placement and inspection of discharges desiring to enter designated trades reached its peak during the fiscal year. Although the greater part of this work has been completed it will continue for some time. The rehabilitation section of the Apprenticeship Branch is under the supervision of Mr. J. F. Marsh. On the authority of the Honourable Charles Daley, Minister of Labour, the Director of Apprenticeship addressed conferences of the Ontario Rehabilitation Committee on "Rehabilitation in Designated Trades" in London, Toronto, Hamilton, North Bay, Ottawa and Kingston.

In the building trades 381 discharges had their previous experience evaluated and are now employed as journeymen or are to acquire additional experience. Sixteen hundred and forty-two discharges who accepted school training have received two years' credit on their term of apprenticeship and have been placed under contract with employers who will provide the experience necessary to complete their apprenticeship training. On completing their contract satisfactorily trainees receive a diploma.

Many discharges from the mechanized forces made application to enter the motor vehicle repair trade. A large number who applied for evaluation in this trade obtained certificates of qualification. To date 1,304 have been evaluated and placed on the job for additional experience. Sixteen hundred and fifty-two trainees were placed under contract on completion of school training. If they pass the examination required on completion of their term of apprenticeship they will be eligible for certificate of qualification.

The hairdressing course of approximately six months was attractive to a large number of male and female discharges. When the director of the training school reports favourably on graduates they are eligible for certificate of qualification.

Barbering provides also an opportunity for many. Trainees who have finished the course have found no difficulty in obtaining employment. Certificates of qualification are available to graduates with favourable reports.

GENERAL

The apprentice training programme for the planing mill, sash and door manufacturing industry has made steady progress. Continual training classes for apprentices have been held in the new mill-room at the Training and Re-establishment Institute, Toronto, since September, 1946.

The co-operation of the committee for this industry and of the Ontario Retail Lumber Dealers' Association has stimulated interest in the need for apprenticeship, the result being that thirty-eight apprentices received training during the fiscal year and applicants have been registered for the next class which commences in May, 1947.

The trade of worker in servicing and installing air-conditioning or refrigerating equipment became a designated trade on February 19, 1947.

The trades of steamfitter and worker in servicing and installing air-conditioning or refrigerating equipment have petitioned for compulsory certificates of qualifications. Numerous meetings have been held and The Industry and Labour Board has received delegations supporting the appeal which is still under consideration.

The trade union representing granite cutters has petitioned that their trade be brought under the Act. A preliminary survey has been made and the employers' organization, Canadian Association of Memorial Craftsmen, discussed the matter at their annual convention. This petition is still under consideration.

Petition was received again this fiscal year from the International Association of Machinists, Tool and Die Makers for their trades to be brought under The Apprenticeship Act. The Board again instructed the Director to make a survey of the industry and report. Upon the completion of the survey a meeting was convened of the union representatives and another meeting of employer and union representatives was called and was well attended. After considerable discussion the Board ruled that the petition remain in abeyance pending a more favourable reaction from employers and evidence of greater unanimity of opinion between employer and employee representatives.

The definite shortage of skilled mechanics in numerous trades has increased the interest of employers in trade training and apprenticeship and enquiries are received continually in respect to these matters. Rehabilitation training centres have demonstrated the possibilities and benefits which may be available to those desiring to learn trades.

It is with regret that the death of Mr. Walter Thorne is reported. Mr. Thorne died on August 28, 1946, after a prolonged illness. Appointed district inspector in 1928, he worked faithfully in the Toronto district since then. Mr. C. J. Ratchford, a casualty of World War II, succeeded Mr. Thorne.

Mr. A. E. Palmer, representative in western Ontario since February 1, 1944, resigned on June 30, 1946. Mr. W. T. McHugh, a dischargée with overseas experience and formerly of the rehabilitation section, replaced Mr. Palmer on October 1, 1946.

The following tables indicate the activities of the Apprenticeship Branch for the fiscal year:

Table No. 1

REGISTRATION OF APPRENTICES BY TRADES

THE INDUSTRY AND LABOUR BOARD

MINIMUM WAGE BRANCH

DIRECTOR: PATTERSON FARMER

The Minimum Wage Act was first passed in 1920 and the first order came into force in May, 1921. All orders under the original Act applied only to female employees. In 1937 a new minimum wage Act was passed permitting the issuance of orders covering male employees as well as female employees.

From time to time orders under the minimum wage Acts were put into force. The employment of upwards of 250,000 females in the Province was affected in each of the last several years by these orders. In the aggregate, these orders covered most of the occupational classifications in which females are employed.

New minimum wage orders, applying to all females in the Province except those exempt by section 16 of The Minimum Wage Act and by order 2 of these new orders, were published as Ontario Regulations 24/47 in the issue of the Ontario Gazette dated March 29, 1947, under The Regulations Act, 1944. When these orders come into force on June 1, 1947, those made under the Act in the past and enumerated in order 16 of Ontario Regulations 24/47 will be revoked.

WAGE RETURNS

Wage information is collected for the purpose of checking compliance with the provisions of the orders in force under the Act. Employers are divided into groups and for further consolidation these groups are placed in twenty-one classes. A summary of the wage rates paid throughout the Province is given in tables appended to this report.

The total number of employers reporting for the fiscal year 1947 was about 1,100 more than for the year 1946 but only slightly more than those reporting in each of the three preceding years. The total number of employees reported was higher than in any year except 1943. The total number of female employees reported was approximately the same as for the years 1943, 1944 and 1946 but is approximately 20,000 below the peak year of 1945. From 1942 to March 31, 1947, inclusive, the employment of females in Ontario has been very high, 70,000 to 100,000 in excess of the pre-war years.

	Fiscal Years					
	1942	1943	1944	1945	1946	1947
Employers reporting.....	16,264	22,781	21,798	21,404	20,874	21,949
Employees of reporting firms	631,631	714,451	578,442	682,836	674,142	703,927
Female employees of reporting firms.....	210,257	224,879	224,459	243,234	223,175	221,883

WAGE ADJUSTMENTS

Increases in wage rates were ordered for twenty-three employees in fourteen establishments as compared with wage increases ordered for twenty-five employees in twenty establishments for the previous year.

ARREARS OF WAGES

Arrears of wages amounted to \$14 and were collected from two employers on behalf of two employees as compared with \$147.27 collected from five employers on behalf of twelve employees during the previous year.

COMPLAINTS AND PROSECUTIONS

Four complaints of failure to pay the required minimum wage rates were received as compared with five complaints during the previous year.

No prosecutions were taken under the Act as compared with one prosecution the previous year.

HOMEWORK

Applications for approval of rates for homework were submitted by 449 employers. These applications were dealt with and approved rates were issued. This compares with applications from 422 employers the previous year. For approval, rates must in no case be lower than minimum rates prescribed in the orders under The Minimum Wage Act.

HANDICAPPED WORKERS

Permits to employers authorizing the employment of handicapped workers at rates lower than the prescribed minimum rates were issued to twenty-six employers affecting thirty-five employees. In 1946 the corresponding figures were thirty-five employers and forty-six employees.

UNIVERSITY OF TORONTO

REPORT OF THE
BOARD OF GOVERNORS

FOR THE YEAR ENDED 30TH JUNE, 1947

To His Honour the Lieutenant-Governor-in-Council:

The Governors of the University of Toronto have the honour to present their forty-first annual report of the financial administration of the University, both for Queen's Park and the Ajax Divisions, together with a comprehensive review by the President of the academic work of the University and its Colleges for the Session 1946-47, and the reports of various officers and departments.

The financial report shows the funds and assets, including investments, receipts and expenditures, etc., as they stood at the close of business at 30th June, 1947, and the certificate of audit of the same by Clarkson, Gordon & Company.

The general revenue for the year amounted to \$4,878,102.29, which together with the Special Legislative Grant of \$1,100,000.00 and an amount of \$478,549.70 appropriated from a Special Grant of \$750,000.00, made a gross total of \$6,456,651.99. Expenditures under the appropriations made by the Board for salaries and maintenance (exclusive of the Ontario College of Education which is maintained by a separate vote) totalled \$6,456,651.99, being an amount equal to the revenue for the year. Additional funds totalling \$406,184.41 for research and other purposes were administered during the year.

During the year under review there has been a continued increase in operating costs and the University has used its best endeavours to minimize the effect of price increases by a careful control of expenditures.

All of which is respectfully submitted.

W. E. PHILLIPS,
Chairman.

February 28th, 1948.

AUDITORS' CERTIFICATE

To the Governors of the University of Toronto:

GENTLEMEN:

We have examined the balance sheet of the University of Toronto (Queen's Park and Ajax Divisions) as at 30th June 1947 and the statement of general endowment and income and expenditure for the year ended on that date. In connection therewith we examined or tested accounting records of the University and made a general review of the accounting methods and of the operating accounts for the year but we did not make a detailed audit of the transactions.

The supplementary grant payable by the Department of Veterans' Affairs of the Dominion Government is shown in the attached statement of income and expenditure in the amount of \$1,120,235.81, which amount has been calculated by the comptroller of the University as being the grant recoverable in accordance with the order-in-council and regulations governing such payment. The amount is, however, subject to confirmation by the Department. Subject to such confirmation being obtained and to the recoverability of the unamortized balance of the expenditures on leased premises at Ajax, we report that in our opinion the accompanying balance sheet and related statements of general endowment and income and expenditure read in conjunction with the footnotes thereto have been drawn up so as fairly to present the state of the University's affairs at 30th June 1947 and the results of its operations for the year, according to the best of our information, the explanations given to us and as shown by the books.

CLARKSON, GORDON & Co.
Chartered Accountants.

Toronto, Canada, 30th January, 1948.

PUBLIC HEALTH ADMINISTRATION

DEWILLET S. PUFFER, B.A., M.B., D.P.H.

R. G. STRUTHERS, M.D., D.P.H.

The succeeding pages of this, the Twenty-third Report of the Department's activities, demonstrate the extent of the interest in those matters which are the concern of the provincial authority. This interest is manifested in a number of fields and in a variety of ways and includes the provision of both direct and indirect services.

Public interest in the plan for providing more effective community health service through County Health Units continues to increase. In addition to the list of Units given in the 1946 Report, the following Health Units were established during 1947:

East York and Leaside	January 30th, 1947
Halton County	July 1st, 1947
Kent County	July 1st, 1947
Lennox and Addington	July 1st, 1947
Leeds and Grenville	July 1st, 1947

This brings the total number of Health Units to twenty and, if the population in Units is added to that of the twelve large urban municipalities with full-time health service, approximately 60% of the population of the Province is covered. Though the number of available qualified public health personnel has not kept pace with the demand, Health Units are more adequately staffed than they were a year ago.

Efforts to increase the number of those signifying interest in qualifying for positions in this field were continued. Six doctors, thirty nurses, one veterinary surgeon and three sanitary engineers were granted fellowships to assist them to pursue studies leading to diplomas or certificates in public health.

Grants-in-aid of County Public Health School Nursing Services were continued in Haldimand, Huron, Middlesex, Perth, Simcoe and Wentworth Counties. Lennox and Addington, where this service was also in effect, chose to adopt the more generalized programme made possible through services provided under the Health Unit plan.

On January 3rd and 4th a Conference of full-time Medical Officers of Health and Supervisors of Nursing of Health Units convened to discuss problems and programmes of Health Units.

A second Conference of full-time Medical Officers of Health in municipalities and Health Units met on June 17th and 18th. An innovation was that, as part of this Conference, representatives of Boards of Health also convened, formed an organization and appointed an executive committee. This organization will permit local Boards of Health an opportunity to discuss problems of mutual

interest and to develop a measure of uniformity in their approach to such problems.

At the end of 1947 there were 451 Medical Officers of Health.

The Annual Convention of Medical Officers of Health called by the Minister was held in Toronto on June 16th and 17th. There were 293 Medical Officers of Health in attendance.

Changes directly affecting the Department during the year 1947 as related to Medical Officers of Health are as follows:

APPOINTMENTS

M. B. Grenon	J. A. Henry	C. B. Colquette	W. J. Donevan
C. B. Petrie	O. R. Newton	I. Shaw	R. H. Doyle
O. W. Oughtred	J. V. Tilley	R. S. Peat	D. C. Draper

E. Blanchard

R. H. Taylor

J. Reeves

REPORT OF THE SOLICITOR

CHARLES WALKER, *Solicitor to the Department*

The following legislation was passed by the Legislative Assembly in the 1947 Session:

The following Acts were passed:

The Embalmers and Funeral Directors Act, 1947.

The Nurses Act, 1947.

The Sanatoria for Consumptives Act, 1947.

The following Acts were amended:

The Dentistry Act.

The Medical Act.

The Public Health Act.

The Public Hospitals Act.

Regulations were passed in 1947 under the authority of the following Acts:

	Date of Approval	Ontario Regulations Number
<i>The Cemetery Act</i>		
St. Mary's Roman Catholic Cemetery	June 5	92/47
<i>The Dental Technicians Act, 1946</i>	Nov. 1	226/47
<i>The Mental Hospitals Act</i>		
Warrants to apprehend patients	June 28	93/47
<i>The Psychiatric Hospitals Act</i>		
Forms	June 5	94/47
<i>The Public Health Act</i>		
Regulations constituting Boards of Health of the various Health Units mentioned hereunder:		
Oxford County and Ingersoll Health Unit	Jan. 3	2/47
East York and Leaside Health Unit	Feb. 22	7/47
Kirkland-Larder Lake Health Unit	Jan. 30	8/47
Wellington County Health Unit	Feb. 20	14/47
Lennox and Addington Health Unit	Feb. 20	15/47
Stormont, Dundas and Glengarry Health Unit	Apr. 10	36/47
Leeds and Grenville Health Unit	May 15	76/47
Eating Establishments—New	Oct. 16	227/47
<i>The Public Hospitals Act</i>		
Amendment Kirkland and District Hospital	Mar. 13	26/47
Amendment re Saugeen Memorial Hospital	July 31	153/47
Maintenance Grants	June 12	96/47
Capital Grants	July 10	133/47
<i>The Sanatoria for Consumptives Act</i>		
Re Provincial Aid	May 15	75/47

DIVISION OF DENTAL SERVICES

F. A. KOHLI, D.D.S., D.D.P.H., *Director*

Public interest in dental health has shown a marked increase during the past year, particularly in areas where Health Units have been established. Surveys would indicate that an increasing number of children are applying to the dentists for treatment.

In the field of dental health this Division is cooperating with the Department of Education, the Ontario Dental Association and the Royal College of Dental Surgeons. The Director took part in the Dental Health Education Week held in Peterborough and District, and was present at the Fall Fairs at Beaverton and Norwood where there were dental health exhibits. Dental survey charts for the use of the dentists, and dental health education booklets for teachers, children and nurses, have been distributed upon request.

The amount of money expended on grants for school dental services was considerably greater than the preceding year. Some of the existing clinics extended their service, and the following new clinics became eligible for grant: Brampton, North Bay, Ops Township and East Wawanosh Township.

Regular inspection and consultive service have been given to the dental clinics in the various Ontario Hospitals and the Central Laboratory. This Division also acted in an advisory capacity to the dental clinics maintained in the Prison and Reform Institutions and in Sanatoria. The Central Laboratory handled an increased volume of prosthetic work during the year. There were no personnel changes in the hospitals dental staff.

The dental car made stops at forty-one places along the C.P.R. line; in Algoma at the beginning of the year, later moving to the Kenora and Rainy River districts. The records show 1,728 school children were given dental attention.

The number of accounts submitted under the plan of emergent dental treatment for relief recipients, administered by this Division, was somewhat in excess of the previous year.

The Division cooperated with the National Research Council and the Dental Division of the Department of National Health and Welfare in planning a survey programme to assess the influence of artificial fluorination of municipal water supplies on the incidence of dental caries. Arrangements have been made with Brantford City and two control centres—Sarnia, which has fluorine-free water, and Stratford, with a natural fluorine content of approximately 1 part per million.

DIVISION OF EPIDEMIOLOGY

R. P. HARDMAN, M.D., D.P.H., *Epidemiologist*

As compared with recent years, the total number of communicable diseases reported during 1947 has been relatively low. Diphtheria, Influenza, Meningococcus Meningitis and Measles, as reported in the Province, have shown a downward trend. There was a reduction of over 50 per cent in the number of cases of Diphtheria during the year, as compared with 1946. Less than 700 cases of Influenza were reported for 1947. This is an all time low since 1934, for during this twelve-year period a yearly average of 4,200 cases were reported. There was also a reduction in the number of cases of Meningococcus Meningitis. The morbidity rates of this disease have not reached the pre-war level. Since 1937, no cases of Smallpox have been reported in Ontario. The morbidity rate for Typhoid Fever was 1.7. Only 74 cases were reported.

The high incidence of Poliomyelitis during 1946 continued during 1947. A total number of over 1,300 cases were reported during the two year period. However, two years of high incidence is not without precedent in this Province, for there were over 1,100 cases of this disease reported in the two years 1929-30. Areas reporting a high incidence during 1946 were comparatively free of Poliomyelitis during 1947. There was an upward trend in the number of Whooping Cough cases and deaths in 1947, as compared with the past three years. There was an increase in the number of cases of Undulant Fever. However, on analysis of the cases, it was found that about 10 per cent were cases of the chronic type, with onset prior to 1947. Eighty-five per cent of the cases resided on farms or earned their livelihood handling livestock or meat products. Over 50 per cent of the patients used raw milk or cream.

During the year, epidemiological investigations were made when requested by local Medical Officers of Health.

Late in 1947, an additional biological product, a triple antigen consisting of Diphtheria Toxoid, Tetanus Toxoid and Whooping Cough Vaccine, was added to the list of biological products distributed free to Medical Officers of Health and physicians in Ontario.

TABLE 1
DIPHTHERIA

Year	Cases	Deaths	Morbidity Rate	Mortality Rate	Case Fatality Rate
1943	75	7	1.9	.1	9.3
1944	185	19	4.5	.2	10.2
1945	253	31	6.0	.6	12.2
1946	455	41	11.3	1.	9.
1947	227	22*	5.5	.5*	9.6

*Tentative.

During 1947, there was a marked reduction in the incidence of Diphtheria in Ontario, as compared with 1945 and 1946. There was a decrease of over 51 per cent of the cases and 46 per cent of the deaths in 1947. Of the 49 counties and districts in Ontario, no cases were reported in 22. Of the remaining counties and districts, 15 reported one to three cases, 12 reported three or more cases. Cochrane, Carleton, Lambton, Parry Sound, Peel, Prescott and Russell, Sudbury, Thunder Bay, Waterloo, Welland and York reported five or more cases. In an analysis of the 115 cases reported in 1947, 31.2 per cent of the cases and 31.6 per cent of the deaths from Diphtheria were in the 0-4 age group. Eighty per cent of the 1947 cases had never received Diphtheria Toxoid.

While there was a marked reduction in the number of cases and deaths from Diphtheria in 1947, there was very little reduction in the case fatality rate. The case fatality rate during the past five years has been constantly high since 1943. Prior to the Province-wide adoption of Diphtheria Toxoid, high case fatality rates were usual and were attributed to the failure in administering antitoxin early in the onset of the disease. Within a period of sixteen years prior to the last war, there was only one year, 1935, when the case fatality rates were lower than 6 per 100,000.

A Province-wide reduction in the number of cases and deaths from Diphtheria has been noted since 1932, due to inoculation of susceptibles against the disease. While morbidity and mortality rates have shown a downward trend, there has been little reduction in the percentage of deaths per case.

TABLE 2
MENINGOCOCCUS MENINGITIS

Year	Cases	Deaths	Morbidity Rate	Mortality Rate	Case Fatality Rate
1943	185	32	4.8	.8	17.2
1944	162	24	4.	.6	22.2
1945	81	11	2.	.2	13.5
1946	88	21	2.1	.5	23.8
1947	55	9*	1.6	.2*	16.3

*Tentative.

The increase in the incidence of Meningococcus Meningitis has declined rapidly since World War II.

The trend in the morbidity rate during 1947 has not been as low since 1936. Fifty-five cases and nine deaths were reported during the year. Over 80 per cent of the cases were reported from urban municipalities. An analysis of 43 cases where age and sex were given shows that 65 per cent of the cases were in the 0-9 age group. Penicillin and Sulphadiazine combined was used in the treatment of over 85 per cent of the cases.

TABLE 3
TYPHOID FEVER

Year	Cases	Deaths	Morbidity Rate	Mortality Rate	Case Fatality Rate
1943	60	9	1.7	.2	15.
1944	78	7	1.9	.1	8.
1945	58	4	1.5	.1	6.8
1946	84	5	2.9	.1	6.
1947	77	6*	1.7	.1*	8.1

*Tentative.

Seventy-four cases of Typhoid Fever were reported during 1947. The morbidity rate was 1.7 per 100,000. As compared with the previous year, there was a 12 per cent reduction in the incidence. Seven cases of Typhoid were reported from a resident school for Indians at Moose Factory, Ontario. Investigation of the outbreak was carried out by the Department of Indian Affairs, Dominion Government. An outbreak of four cases of Typhoid Fever occurred in an Eastern Ontario County Health Unit following a church supper. The cause was not determined, although a search for a carrier had been carried out.

Multiple cases of Typhoid Fever occurred in four families residing in rural areas, and eight cases resulted from exposure to known cases where the first case had not been suspected. Eleven cases were traced to carriers unknown at the time of exposure of the case.

Nine Typhoid carriers and one Paratyphoid carrier were found in 1947, following an investigation of the cases. There are recorded at present fifty-one known Typhoid carriers in the various parts of the Province of Ontario.

An outbreak caused by Haemolytic Staphylococcus Aureus occurred early in January, in which 200 persons were said to have been involved. The same type strains of organism isolated were found on arms and throat swabs of the personnel.

POLIOMYELITIS

During the past twenty years in Ontario there have been only two occasions whereupon a high incidence of Poliomyelitis has been noted in two successive years. In 1929-30 the provincial morbidity rates per 100,000 for Poliomyelitis were 16.8 and 19.8. In 1946 and 1947, the morbidity rates were 12.7 and 19.4. It is not unusual for cases of Poliomyelitis to be reported each year from cities, so counties like York, Carleton, Essex, with a high percentage of urban population report cases each year. However, high rates of over 30 per 100,000 have never occurred in two successive years in any county or district in Ontario. During the past twenty years, epidemic rates of 30 or over have been reported from 40 of the 49 counties and districts. Twenty-six of the 49 reported excessive rates, either during years of high incidence of Poliomyelitis in the Province, 1929-30, 1937, 1946-47, or years prior to or subsequent to years of high incidence. Fourteen counties reported excessively high rates on two occasions, and one reported high rates on three occasions—1930, 1937, 1946. This last county is a typical rural county. The range of years between reporting of epidemic rates was 6 to 10 year periods.

During 1947, over 808 cases of Poliomyelitis were reported in Ontario. With one exception, cases were reported from all 49 counties and districts, as shown by the morbidity rates on map 1.

High morbidity rates are shown for Frontenac (97), Lennox and Addington (44), Leeds and Grenville (30), Wentworth (34), Haliburton (68), and the District of Muskoka (46). The 1947 morbidity rates for Poliomyelitis in both Frontenac and Lennox and Addington were the highest rates ever reported for the two counties. Leeds and Grenville, Wentworth, Haliburton and Muskoka, had the highest morbidity rates reported since 1937. Although Poliomyelitis was reported in 1947 from all but one county, high county rates of 30 and over did not appear in counties or districts that had suffered from severe outbreaks during the past four or five years.

For comparative purposes, map 2 shows the morbidity rates of Poliomyelitis by years for the various counties, where rates of over 30 per 100,000 had occurred during the past five years.

In 1943, the County of Hastings suffered from an extensive outbreak of Poliomyelitis in the Trenton-Belleville area. In 1945, an outbreak of Poliomyelitis was centred in the District of Temiskaming. In 1944, outbreaks of Poliomyelitis were reported in the Huron-Perth County areas. In 1946, the counties of Carleton, Prescott and Russell, Stormont, Dundas and Glengarry, in the extreme easterly part of Ontario, experienced high morbidity rates, as well as Victoria, Peterborough, Northumberland and Durham Counties, in the central part of the Province, Lambton and Essex Counties, in the extreme westerly portion of Southern Ontario also reported an excessive number of cases in 1946.

Poliomyelitis morbidity rates are based on the number of cases reported, and both abortive and paralysed cases are included in the morbidity rates. Many municipalities in Ontario report few, if any, abortive cases. Consequently, a significant difference would appear in the rates of these municipalities reporting few abortive cases. This may account for low rates appearing in some counties for many years, while the adjacent counties, reporting a high percentage of abortive cases, shows a higher rate. As a result, morbidity rates should be interpreted with caution. In view of this, the deaths reported in Ontario for Poliomyelitis during the past five years are shown in table "A" below. Assuming an average case fatality rate for Poliomyelitis to be 5 per 100, the comparative table below shows the actual number of cases reported, the actual number of deaths, and the number of cases that could have occurred if the average fatality rate of 5 per 100 was a constant factor. The estimated number of cases applying the 5 per cent rate is purely hypothetical.

TABLE "A"

Year	Cases Reported	Deaths	Cases Estimated by Reported Deaths
1943	81	17	340
1944	333	21	420
1945	183	11	220
1946	512	33	660
1947	791	32	640

While the number of deaths for 1947 is only tentative, it is not likely that more will be reported at this date, as fairly accurate records from all hospitals have been returned. Seven hundred and ninety-one cases of Poliomyelitis were reported from the local Boards of Health, while over 810 cases were reported from hospitals, the difference being abortive type cases. The case fatality rate of Poliomyelitis, based on the 810 cases, is 3.9 per cent. This is the lowest case fatality rate experienced in Ontario to date. Of the 810 cases, 597, or 73.5 per cent, were urban, and 211, or 26.4 per cent, rural.

TABLE "B"

Age Group	1947 Cases	Percentage Distribution	1929	1930	1937	1942	1944	1946
0-4	124	15.3	27.4	23.2	25.5	27.1	19.8	23.4
5-9	221	27.5	35.1	35.3	33.6	23.8	35.5	33.2
10-14	167	20.0	21.4	18.8	20.8	25.0	19.8	20.0
15-19	107	13.2	9.8	13.2	10.1	5.4	10.5	8.
20-24	61	7.5	3.0	5.6	5.1	8.6	5.4	4.7
25-29	54	6.6	3.3	3.9	4.9	3.2	2.4	5.0
30-39	60	7.4	4.3	2.4	3.8
40-49	12	1.5	2.1	1.2	.6
50 plus	2	.2	2.4	.6
Total	808							

The above table shows the percentage distribution of Poliomyelitis for 1947. For comparative purposes, the percentage distribution of Poliomyelitis for five years is also shown (cases were omitted for brevity).

A marked decrease in the incidence of Poliomyelitis in the 0-4 age group is noted in the table, as compared with 1946, 1929, 1942, 1937.

The age group 5-14 in the various years show slight change.

In 1930 and 1947, the age group 15-19 is similar. However, the later age groups, 20-50, for the various years show increasing percentages since 1942 (free hospitalization). Whether this is due to better reporting, greater susceptibility of persons in the older age groups, or other factors, is not known. A careful survey would have to be made of these years regarding the percentage of patients developing the abortive or paralytic type. However, there was an increasing number of patients in the 20 and over age group with the abortive type of the disease in 1947, as compared with previous years.

Tables comprise the balance of the report.

A five-year incidence of communicable diseases, cases and deaths, as reported by the various local Boards of Health is shown in Table 4.

Table 5 shows the incidence of communicable diseases as reported by months.

Table 6 shows the geographic distribution of certain communicable diseases, by counties, including all cities and towns.

Table 7 shows the distribution of literature by the Division for the year.

The distribution of free biological products and insulin is carried out by this Division. Tables 8-11 show the distribution of Insulin. During the fiscal year, April, 1946, to March, 1947, over \$49,920.00 was spent on the distribution of free insulin to indigent patients in Ontario. A slight increase is shown in the number of patients provided with free insulin in the 1946-47 period, as compared with 1945-46.

Tables 12-20 deal with the distribution of biological products distributed to physicians and local Boards of Health in Ontario. There was an approximate increase of 20 per cent in the expenditure for insulin and biologicals during the past two years.

DIVISION OF INDUSTRIAL HYGIENE

J. G. CUNNINGHAM, M.B., D.P.H., *Director*

OCCUPATIONAL DISEASES

The work of the Division in the control of occupational diseases takes account of small continued exposures to dangerous materials which produce ill health without necessarily resulting in frank cases of poisoning. The thoughtless use of known poisons for new purposes or defective maintenance in known exposures and the constant introduction of new materials in industrial processes contribute to the number of cases while extensive current literature reporting results of research and field experience and the growing interest of employers and employees help to control these conditions.

The Division has technical staff to assist industry with such problems, a fact which is not as well known in industry as it should be—chemists to identify materials causing harmful exposures, engineers to assess and improve mechanical measures for the control of dust and fumes and physicians to evaluate hazards and assist in their control.

The Industrial Hygiene Laboratory analyzed about 500 samples from 175 companies to determine the main constituents and their proportions in raw materials or in the atmosphere where the hazard was suspected. Some of these were carried out in great detail. Nearly 600 visits were made for special purposes from the investigation of silica exposures in foundries to the control of vibration from pneumatic tools. There has been constant review, with officials of the Labour Department, of plans submitted under The Factory Act, covering new construction in industry and often extending to the installation of equipment for process requiring dust and fume control.

Arrangements for measuring the value of improvements as a result of engineering installations have been extended late in the year. Equipment for exhaust ventilation is still scarce. Four foundries have been studied in some detail apart from general recommendations for dust control. Plans for dust control in elevators have been reviewed to meet new regulations under The Factory Act. Existing codes containing recommendations for the guidance of industry in the installation of local exhaust vent have been reviewed. From these and local experience two such codes have been prepared for consideration—those for grinding, buffing and polishing of metal and for wood working.

From various sources there have been about 30,000 examinations, most of them using 70 millimeter chest x-ray equipment. Of 25,000 in this group employed in industry where a silica hazard is present, there have been 6,500 actually exposed in whom there were 6 cases (.092%) of active tuberculosis, 8 cases (.122%) of doubtful activity, 43 cases (.66%) of uncomplicated silicosis and 34 cases (.520%) of silicosis with tuberculosis. Compared with the group of 25,000 as a whole, the number of active tuberculosis cases was the same but the total number of tuberculosis cases was almost twice as high in the group exposed to silica. In the larger group there were 19 cases sent to Sanatorium immediately, 7 of them with positive sputum. Reference should be made to conditions, other

than pulmonary tuberculosis, which are drawn to the attention of the plant physician for further consideration, particularly abnormal heart shadows, present to the extent of 1.15% of those examined.

Lead and Silica remain the most important industrial exposures with a great variety of others in a less degree. Under the provisions of The Factory Act, twenty companies provided reports on periodic examination of workers exposed to lead and eleven to benzol, while sixty-four additional plants and one hundred and ten physicians took advantage of blood smear examinations provided by the Department for workers exposed to lead. Tests made at a boring operation on a copper lead alloy showed lead dust in air in hazardous amounts contrary to expectations. This may have been due to a new type of cutting tool generating higher temperature and releasing lead. Special consideration has been given to certain hazards.

Artificial Abrasive Manufacture:

Four companies engaged in the manufacture of artificial abrasives have been required to carry out every six months physical examination with emphasis on the chest and blood, for furnace men and others who may be exposed to the fumes from electric furnaces. Lung changes have been produced considered to be associated mainly with increased exposure due to maximum production for war purposes. Research on this problem is being conducted here, in Great Britain and in the United States. The criteria for diagnosis of the condition, particularly in its early stages, have had to be worked out here and this has been the subject of a report published by Shaver and Riddell in the *Journal of Industrial Hygiene and Toxicology*. The chemical determinations on the raw materials, fumes and biological material have been the subject of another report by Jephcott, Johnston and Finlay to be published shortly. The ventilation of electric furnaces generally presents a special problem which is receiving more widespread attention recently.

Radioactive Substances:

Installations of x-ray equipment and radium in industry for testing castings and welds have been checked to prevent exposure of operators. The trend toward new uses of radium has been observed, to avoid unnecessary exposure. These have not been important as yet—one of them has to do with the elimination of static electricity on paper presses. Detailed supervision of working environment has been applied to the refining of radium. Periodic physical examination including blood examination, Geiger-Mueller and breath tests have been applied as indicated.

Equipment for the measurement of radon in the expired air of workmen and in the vicinity of processes involving exposure to radiation has been developed to avoid sending breath samples out of the country for examination. The difficulties encountered have involved the Division in a problem in research. The indications are that this equipment will be available shortly.

Mercury:

The hazard from mercury is not common in industry but it has been the subject this year of enquiry in its use for electrical contact for testing equipment. All exposed showed two to six times the normal amount of mercury in urine and minor changes in the differential blood count but no clinical evidence of poisoning.

Contamination of the work area with mercury rather than the direct exposure was important since tests of air made after thorough cleaning showed concentrations below the allowable limit.

Nitrobenzene and Aniline:

Materials containing nitrobenzene and aniline for use in cleaning type have been encountered, producing ill effects due to the absorption of these materials through the skin. This is one instance in which substitution of materials has been advised and accepted.

Carbon Monoxide:

A study was made of concentrations of carbon monoxide in twenty-seven garages of all sizes. The exposure seldom exceeded one hundred parts per million in air (the allowable concentration) but it is appreciated that the results of tests depend almost entirely on the care which is taken in operating cars in enclosed spaces. The conditions are improved where general ventilation systems have been installed, particularly if they are supplemented with attachable flexible tubing to carry exhaust fumes out of doors. In small garages, some judgment in operating cars and the use of unit heaters and flexible hose equipment will control the hazard.

Beryllium:

Certain Beryllium compounds have received a good deal of attention in the United States because of a lung condition which has been reported, particularly in the refining of the metal and in the use of some of its salts. The use of beryllium compounds in Ontario is very restricted. In the group of workmen examined here there has been no evidence of trouble and little opportunity for exposure where it is known to be used.

Undulant Fever:

Serological examinations were carried out on a group of workers on the beef killing floor of a large abattoir. The results suggest that most new employees become infected with *Brucella Abortus* within two years of starting this work. The blood tests are positive for some months or years after infection and then decline, suggesting that the immune substances disappear although there is no evidence of second attacks in long-term workers.

Dermatitis:

About 5,000 claims received by the Workmen's Compensation Board for skin conditions have been reviewed to determine the extent to which they are of occupational origin and to detect any concentration of cases to which control might be applied. These cases are widespread in origin, both geographically and in respect to industrial process. There have been very few instances in which more than one or two cases have been reported from the same source. One of these was a group of twenty-eight cases of "chloracne" in men exposed to halowax in splicing coated wire. None of these men suffered systemic effects. Another was a group of twenty cases in the manufacture of wallpaper using 4 chloro 2-phenyl phenol. In both cases substitution of materials was made with no recurrence of cases.

Silicosis:

Consideration has been given to legislation requiring the periodic physical examination of workers exposed to silica dust in foundries, porcelain manufacture, granite cutting and other such operations, comparable to that now existing in The Mining Act for underground workers. In the meantime the attempt has been made to carry out some of these examinations on a voluntary basis. It appears that with present facilities these groups can be covered in about eighteen months. This year one hundred and thirty-two visits have been made to plants arranging for such examinations and the clinic has been set up seventy-five times. In fourteen instances requests have been made for deferment for various reasons but in only one case has the employer refused the examinations. Both employers and employees have co-operated satisfactorily in this endeavour, which is directed to the control of tuberculosis in those exposed to silica dust, to preventing aggravation of existing physical defects by such exposure and to providing suitable advice regarding employment to those who have contracted silicosis.

About six hundred claimants for Workmen's Compensation for silicosis have been examined and x-ray films from four hundred other workmen from other provinces have been referred here for interpretation.

Ready Reference for Occupational Diseases:

A small publication prepared by the Division some years ago, summarizing the main occupational hazards and the signs and symptoms encountered, is out of print. Arrangements were made that an enlarged publication of the same type be prepared jointly with the Industrial Health Division of the Dominion Department of National Health and Welfare to be printed and distributed by them. This material will be available shortly.

INDUSTRIAL HEALTH SERVICES

The development of health services within industry for which no legislation exists and which depends upon the initiative of the employer has been slow, probably due to failure to present the case adequately. Contacts made in

dealing with occupational diseases have been used for this purpose as well as meetings with employers, and to a less extent, with employees. The contribution which health services can make to improved industrial relations as well as to health, warrants the attention of the manufacturing group. Those industries which have established them use the facilities of the Division for the investigation of special health problems, for the details of organization and operation of these services, including record-keeping, for securing adequately trained staff and for health literature. Application to small factories is made by setting up services for groups of plants or through part-time physician and nursing service. In this connection the Victorian Order of Nurses now has arrangements with nineteen plants for nursing service within the plant at specified hours during the day.

The training of medical personnel for this work, as far as nurses are concerned, has taken the form of another Refresher Course, this time presented by the School of Nursing at the University of Toronto at which one hundred and twenty-three nurses attended. In most cases the employer met all expenses involved. A group of eight nurses taking the training in public health chose an option in industrial nursing for part of this training. Various other groups of nurses have been addressed by the Consulting Industrial Nurse of the Division on this subject.

The Health Centre operated by the Government for the maintenance of the health of Civil Servants is an example of what should be widespread in industry. Here employees receive physical examination—are encouraged to report even minor complaints of ill health, which are investigated and the patient reassured or referred to the family physician. They are advised on measures intended to keep them well. The Division provides chest x-ray for new employees and for sick employees where it is indicated. In the past year these examinations have detected ten active cases of tuberculosis requiring Sanatorium treatment.

Material on various phases of Industrial Hygiene has been presented at a Symposium on Industrial Diseases at Saranac Lake; The Local Metal Trades Council; The Granite Cutters Union; University of Western Ontario; Toronto University; Employers at Brampton; The Accident Prevention Association at Carlton College, Ottawa; The Chemical Institute; Canadian Chemistry and Process Industries and the Canadian Public Health Association; Ontario Crop Improvement Association; Canadian Association of Physicians; Canadian Electric Code Committee.

Radium and X-Ray for Cancer:

The Department has been represented on the Cancer Foundation and its Advisory Medical Board. The Foundation issues an Annual Report. This year the annual grants made by the Government to seven treatment centres amounting to \$113,500.00 have been paid to the Foundation for distribution to the clinics rather than being paid directly.

The Department has supplied these clinics from its radon plant, seeds used in treatment as follows:

ANNUAL CONSUMPTION OF RADON, 1947

Centre	Orders	Seeds	Milli-curies	% M.C.'s of Total
Toronto General Hospital.....	149	4,398	3,808.15	45.00
Kingston General Hospital.....	42	381	413.32	4.88
Hamilton General Hospital.....	36	255	268.92	3.18
Ottawa Civic Hospital.....	162	1,042	1,031.45	12.19
London Victoria Hospital.....	72	1,872	1,857.00	21.94
Windsor Metropolitan Hospital.....	18	184	191.30	2.26
Ottawa General Hospital.....	23	370	395.09	4.66
Other.....	94	745	498.47	5.89
TOTALS.....	596	9,247	8,463.70	100.00

This year 100 mgs. of radium were added to the plant to make a total of 395 mgs. This involved some major changes and emphasized the fact that this equipment is now fifteen years old and must soon be replaced. Additional provision has been made for the protection of the operator.

Calibrations of x-ray equipment were made at eight centres including five of the Cancer Clinics. Plans for x-ray installations in hospitals submitted to the Hospital Division for review are referred to the Physicists of this Division in special cases.

Assistance was given in two cases using the Geiger-Mueller counter where small quantities of hospital-owned radium was lost.

Cyanide Fumigation:

Under the Act and Regulations regarding the use of cyanide compounds for fumigation of premises there were issued during 1947 one new license for household and three new licenses for commercial fumigation. There were twenty-six renewals for household and twenty renewals for commercial fumigation. Judging by the number of permits issued by the Toronto Department of Health there has been a substantial decrease in the use of cyanide compounds for this purpose. There were two hundred and seventeen such permits issued for 1947 compared with fifteen hundred in 1943.

The attention of Medical Officers of Health has been drawn to the fact that the regulations may be applied to other designated materials used for fumigation and that Methyl Bromide is one of these.

The development of new materials for the extermination of pests has been partly responsible for a request from the Canadian Pest Control Association that all pest extermination be made subject to regulation. No decision has been reached.

Bedding Regulations:

About twenty-five hundred articles coming under the regulations have been placed off-sale, mostly due to failure to label them. The arrangements whereby local municipalities assist with the inspections have been considerably extended. The municipal inspectors detect the goods which have not been labelled and conduct follow-up visits, while the provincial inspectors procure samples for testing. The test itself is carried out at the Provincial Laboratory. There were

one hundred and seventy such samples, one-half of them containing used material and therefore mislabelled. Nearly one-half of the samples tested and over ninety per cent of those mislabelled were from goods manufactured outside the Province.

There were eighteen hundred inspections—twenty-five per cent to manufacturers, fifty per cent to retailers, five per cent to suppliers and twenty per cent to renovators and a small miscellaneous group.

No charges have been laid under these regulations in the past year.

The availability of suitable cloth for labels did improve but again presents some difficulty.

Manufacturers and retailers in Ontario have uniformly supported the regulations.

SANITATION OF CAMPS AND MEDICAL CARE OF EMPLOYEES IN UNORGANIZED TERRITORY

Amendments to the requirements for the sanitation of camps have been under consideration. These requirements are being limited to provisions which may be reasonably considered to have a direct bearing on health and omit those which might be desirable on aesthetic grounds. A number of companies have established camps which provide much beyond anything required by regulation and with the present tendency towards centralization which comes with improved transportation, such camps are more numerous. It is desirable that the contract physician be relieved of the requirements for camp inspection for sanitation purposes and that the present inspection staff of the Department do this work.

There are established communities in unorganized territory to which the regulations regarding medical care of employees apply in spite of the fact that all ordinary facilities for medical care are available anyway, that is, they have outgrown the need for the medical contract system. Although there are certain defects in it the system, or some modification of it, seems necessary for camps at a distance from medical care. Despite the considerable increase in cost of medical care in recent years the maximum which may be deducted from wages for this purpose has remained at one dollar per man per month for thirty years.

The Report of the Chief Sanitary Inspector follows.

ANNUAL REPORT OF THE CHIEF SANITARY INSPECTOR, 1947

In view of the shortages in raw and manufactured material and the dearth of experienced workmen for Northern Ontario industrial camps, the larger operators have made some progress in providing more permanent employment for experienced workmen, thus eliminating as far as possible large groups of workmen employed for short durations on seasonal employment on woods operations.

In keeping with other industries and conforming with the Government policy of improving methods of lumber and pulpwood operations and employment of labour, the larger operators are encouraged to establish small townsites or community settlements where the families of workmen can be economically housed at reasonable distance from the woods camp operations.

The centralizing of company headquarter offices at the point of operations and the development of small company-controlled community centres for the workmen and their families has grown rapidly during the past year.

The general use of heavy mechanized equipment in camps having made good roads available at all seasons, combined with the two-way radio telephone systems has reduced some of the difficulties in contacting the contract doctors, and also in the transportation of sick or injured workmen to the hospital centres.

The Company executives have been very co-operative with our field staff of sanitary inspectors during the year. Requests for information and approval of small portable camps built on runners, also a large number of sectional camps which can be dismantled and easily removed to new locations, have been constructed. This type of camp is usually provided with running water supplies, central heating and ventilation systems, flush toilet systems, and sewage disposal systems, which will require close sanitary supervision by the inspectors at regular intervals during the summer and winter months.

The reports received in the central office up to December 31st show 53,007 workmen were employed in the various industrial camps during the past year which is considerably higher than at any one period for the past six years. Out of this number 40,921 were engaged in woods operations.

The following table will indicate the nature of employment and distribution of workmen employed in the various industrial camps in the territorial districts operating under the Health Regulations:

INDUSTRY	Number of Operations	Number of Camps	Number of Workmen
Lumber.....	138	302	13,096
Pulpwood.....	62	418	24,370
Sawmills.....	70	77	3,455
Mining.....	47	47	6,176
Construction.....	31	44	4,931
Railway.....	3	57	979
TOTAL.....	351	945	53,007

Medical Care and Sanitary Supervision:

It will be noted from Table Number 2 the total number of camp inspection reports received, 5,951 during the year; 1,163 inspections were made by the staff of Sanitary Inspectors and 4,788 visits made by the contract physicians.

The distance to be travelled and the time involved by the contract physicians away from their offices has reduced the number of visits for medical care which is so desirable to the employer and employees. With this in mind, some operators have made arrangements under the Regulations for a full-time resident physician at the camps' headquarters and in community centres.

The following information will indicate the number of physicians and the nature of the work involved under the Regulations during the past year:

Number of Medical and Sanitation Contracts	Number of Contract Physicians	Number of Assistant Physicians	Number of Physician's Reports Received	Number of Inspector's Reports Received
297	126	47	4,788	1,163
MEDICAL SERVICES RENDERED AS REPORTED BY THE INDUSTRIAL PHYSICIANS				
Number of Workmen Employed	Number of Workmen Requiring Treatment	Routine Physical Examinations	Communicable Diseases	Immunizations
53,007	36,374	1,291	1,816	1,559

When the contract physicians' monthly reports are received promptly by the Inspectors, they have been most helpful in the control of water supplies and camp sanitation; however, the contract physician feels his first responsibility is to the employer and to provide the necessary medical attention to the employees. The above records show a considerable reduction in the number of routine physical examinations and immunizations carried out during the past year which may be attributed to curtailment to some extent of mining operations.

Lumber and Pulpwood Camps:

Again this year it will be noted a larger number of workmen were employed, and where workmen were available, operations were extended throughout the summer months. In a survey of non-standard camps employing less than 15 workmen exclusive of foremen and clerks, there were 348 camps, employing 2,134 workmen. These small contractors, sub-contractors, and jobbers' camps have given grounds for complaints during the year regarding unsanitary living conditions. Consideration is now being given to bringing this type of operator's camps under more direct control of the Regulations.

Mining and Development Camps:

A total of 47 mining camps were in operation during the year in unorganized territory employing 6,176 workmen. The supervision required during the development stage of mines, mining townsites and communities has involved considerable time by the Inspectors to ensure sanitary water supplies and sewage disposal systems, etc., during the early stages when squatters become a problem.

Construction Camps:

During the year 44 camps were in operation for approximately 10 months, employing 4,931 workmen. Road construction camps between the Red Lake mining area and Vermillion completed operations and all camps closed down during the latter part of the year. The four Hydro development camps now operating are employing approximately 1,000 workmen in each camp located at Terrace Bay, Nipigon, Thessalon, and Ear Falls.

Communicable Diseases:

In co-operation with the Division of Venereal Disease Control 55 cases of V.D. were served with notices and were placed under treatment at approved

centres. Influenza, pneumonia, dysentery, and conjunctivitis in camps were the most prevalent causes of illness and lost time during the year. Combined with the 1,816 cases of communicable diseases reported by the contract physicians from industrial camps, 163 other cases were investigated by the Inspectors in the unorganized areas, showing a total of 1,979 cases in all.

The following Communicable Diseases were reported up to December 31st, 1947:

DISEASES	Industrial Camps	Unorganized Territory	Total
Chickenpox.....	5	7	12
Conjunctivities.....	107	...	107
Diphtheria.....	4	1	5
Dysentery (bacillary).....	251	50	301
Erysipelas.....	1	...	1
Gonorrhoea.....	39	10	49
Influenza.....	1,061	...	1,061
Jaundice (infectious).....	7	...	7
Measles.....	17	25	42
Mumps.....	55	9	64

Septic Sore Throat.....	5	15	20
Syphilis.....	16	2	18
Tularemia.....	1	...	1
Typhoid Fever.....	6	1	7
Whooping Cough.....	...	26	26
Scabies.....	59	...	59
Pleurisy.....	16	...	16
Ringworm.....	1	...	1
Trench Mouth.....	3	...	3
Impetigo.....	36	11	47
TOTAL.....	1,816	163	1,979

Health Units:

During the year assistance has been given to the Medical Officers of Health and the Sanitary Inspectors' staff in the two health units, Timmins and Kirkland Lake areas, in the sanitary inspection of mining, lumber and other industrial camps in the unorganized townships and in municipal inspection services.

Rural School Inspections:

From our Sanitary Inspectors' reports, 163 rural school inspections have been made, followed by letters of recommendations to the local school Boards and District School Inspectors. Close co-operation in this work has developed between the representatives of the Department of Education and our District Sanitary Inspector in rural school sanitation.

Tourist Camp Inspections:

Investigations of complaints and routine sanitary inspections were made of 261 tourist camps and resorts during the months of July, August and September in the unorganized territory, covering sources of drinking water supplies, storage, and the handling of food supplies, toilet and sewage facilities.

In addition, 62 inspections were made of children's fresh air summer camps and grounds. These inspections are made on or before the Departmental licenses are issued to camp leaders under the Regulations.

Unorganized Towns and Villages:

There are approximately 500 unorganized towns or villages in the territorial districts without municipal organization. These villages have a population from 100 to 1,400 persons. In the sanitary supervision of these communities, public notices are sent out early each spring by the Inspectors, followed by a complete sanitary survey before the warm summer months.

The co-operation of local School Boards, Boards of Trade, and other small groups of local residents in this work has been much appreciated by our Inspection staff who have only a very limited amount of time for their work.

REPORT OF CIVIL SERVICE HEALTH CENTRE

The activities of the Health Centre continue to expand.

During the year it was found necessary to increase our nursing staff by one. Miss Marion Kidney joined our staff in October after having spent a considerable time with the York County Health Unit.

On the 3rd February, 1947, a restroom was opened at Osgoode Hall to take care of the needs of the female members of the staff. We have been assured that this has filled a long felt need for such accommodation.

The unit in Room 366 of the main building continued to operate in spite of the fact that very few people took advantage of the service offered. Toward the end of the year, however, there was a considerable upswing to the attendance there and there seems to be justification for continuing this sub-centre.

There has been some broadening of the scope of activities. For example, routine inoculations, against typhoid, of members of the Central Laboratories' staff have been taken on. Also arrangements were completed for the examination and inoculation (against typhoid, diphtheria, as well as vaccination against smallpox) of a group of forty-three nursing assistants who are entering training for general duty. This work is in addition to our regular duties.

Considerable interest has been evinced by civil servants regarding health measures in general and concerning the prevention of the common cold in particular. There have been more enquiries regarding cancer, rheumatism and other chronic ailments. Advantage is taken of every such enquiry to further the preventive side of the work and there seems reason to feel that results are being obtained. Finally, more requests are being received for complete physical examinations and there have been instances where the individual has been sufficiently interested in a follow-up examination to enquire about an appointment rather than waiting to be advised regarding it.

Furthermore, we are pleased to note an increase in the number of enquiries dealing primarily with home conditions.

An encouraging feature is the number of requests for information concerning night classes and hobbies. Here one might mention arts and crafts in particular.

No attempt has been made to visit, at home, members of the service who have been away because of accident or illness. At the same time a number who have been confined to home or hospital over a period of time have been visited on one or more occasions. It is felt that such visits may well be continued advantageously but, of course, to a limited extent.

There seems reason to feel that the Health Centre is providing a worthwhile

service. Unfortunately, we have fallen short of our objective but it is better to set the sights too high rather than too low.

Figures for the year are attached hereto.

TOTAL VISITS TO DISPENSARY, 11,859

DIVISION OF LABORATORIES

E. L. BARTON, M.D., *Director*

During the year 1947, the Division of Laboratories underwent considerable expansion, due to the fact that four laboratories were put into full-scale operation. In March of that year, the Regional Laboratory established in the City of Windsor began to function under the direction of Mr. W. J. A. Percy. Up to the end of December this laboratory has performed 57,626 examinations. The laboratory is well equipped and the quarters are spacious. The quarters in this laboratory, as in other Regional Laboratories, are supplied by the City of Windsor. The Department supplies staff, equipment, reagents and supplies for the performance of tests. The staff of the Windsor Laboratory at the present time consists of seven staff members.

The Regional Laboratory in Kirkland Lake was opened on July 2nd, 1947, under the direction of Mr. B. M. Branscombe. This laboratory is situated in the Kirkland Lake District Hospital to serve the Kirkland-Larder Lake Health Unit. Since our Kirkland Lake laboratory is the only laboratory in that area, considerable hematology and other types of clinical pathology are carried out. There are three staff members on the Kirkland Lake staff at the present time.

On February 28th, 1947, our Subsidized Laboratory in the Kitchener-Waterloo Hospital under the direction of Dr. L. C. Fischer began full operation and on that date a demonstration was held for the Kitchener-Waterloo Medical Society.

Our Subsidized Laboratory in the Stratford General Hospital was established on a full-scale basis on May 28th, 1947. This laboratory is under the direction of Dr. S. J. C. Miller.

It was with regret that we learned of the death of Dr. N. F. W. Graham, Director of our Regional Laboratory in Sault Ste. Marie, on October 22nd, 1947. Dr. Graham first joined the Department in September, 1920, and was Director of the Sault Ste. Marie laboratory since that time. Mr. S. G. Trevor, formerly Bacteriologist of our Regional Laboratory in London, is now in charge of the Sault Ste. Marie laboratory.

Two members of the General Laboratory staff have received training in the United States during the year. Mr. J. B. Fischer, in charge of the Mycology Section of the Central Laboratory, completed successfully a course in Mycology under Dr. Norman Conant of Duke University, in July. Mr. Fischer also visited the Branch Laboratory of the New York State Department of Health in New York City, following his course at Duke University. Also, a visit was made to the Laboratories of Dr. Rhoda Benham at Columbia University. The physicians in Central Ontario have been circularized regarding the mycological service operated in the Central Laboratory and it is hoped that in the coming year this service can be extended to our Branch Laboratories on a Province-wide basis.

In September, 1947, Miss V. Crossley, in charge of our Enteric Disease section, visited the Salmonella Typing Centre under the direction of Dr. P. R.

Edwards in Lexington, Kentucky, for the purpose of reviewing recent advances in this field. Miss Crossley also spent one week at the laboratories of the Michigan State Department of Health in Lansing, Michigan, reviewing their methods for the typing of Shigellae organisms.

A service in surgical pathology was established in our Regional Laboratory, Fort William, under the direction of Dr. A. E. Allin, on April 3rd, 1947. This service was made possible by the co-operation of the municipal authorities in Fort William, in supplying additional space for laboratory quarters. This service will allow a more rapid and more efficient pathological service for the North-Western part of the province.

During the year 1947, the Division of Laboratories performed 1,260,155 examinations. This is an increase of 67,593 examinations over the Divisional total of examinations in 1946. There has been a decrease in the volume of work of some of our Regional Laboratories, but this has been due mainly to the demobilization of the Armed Forces and the establishment of new laboratories. During 1946 there were 201,730 examinations performed for the Armed Forces and even with the loss of these specimens, the Divisional volume of work has increased.

The Director of Laboratories wishes to thank the senior officers of the Department for their assistance during the year, and also the Directors and staff of Regional and Subsidized laboratories for their valuable co-operation.

The following is a summary of the work conducted in the Central Laboratory, with reports from Dr. M. C. Dinberg, Provincial Pathologist and the Directors of Subsidized and Regional Laboratories:

Table 1 shows the distribution of examinations conducted at the Regional Laboratories of this Division, along with the diagnostic outfits distributed during 1947.

Table 2 shows the distribution of examinations conducted at the Subsidized Laboratories of this Division, along with the diagnostic outfits distributed during 1947.

DIPHTHERIA AND TUBERCULOSIS

Diphtheria:

During the year 6,703 cultural examinations were performed for the isolation of *C. diphtheriae*, of which 689 revealed the presence of organisms of typical morphology. Virulence tests were performed on 447 of these cultures, some of these being from pure cultures and others from field cultures on Chocolate Tellurite slants. Table 3 indicates the distribution of the types which were found. Intermedius type continues to be the most common type in Canada.

TABLE 3
TYPES OF *C. DIPHTHERIAE*

Intermedius	Mitis	Gravis	Not Tested	Total
95	19	42	533	689

Tuberculosis:

Table 4 indicates the percentage of examinations where acid-fast bacilli resembling *M. tuberculosis* were identified on microscopic examination in sputum. 7.36 per cent of 28,009 examinations showed acid-fast organisms.

TABLE 4
MICROSCOPIC SMEAR EXAMINATIONS FOR *M. TUBERCULOSIS*

Number Examined	Number Positive	Per Cent Positive	Number Negative	Per Cent Negative
28,009	2,060	7.36	25,949	92.64

Cultural examinations for *M. tuberculosis* totalled 18,970, of which 504 were positive after four weeks' incubation and 728 positive after eight weeks' incubation. Table 5 indicates the specimens examined, with the number of positives obtained from the various specimens.

TABLE 5

1,650 guinea pigs were inoculated to demonstrate the presence of *M. tuberculosis*. A summary of these examinations is shown in Table 6. Thirty-seven specimens proved to be positive by guinea pig inoculation that were negative on cultural examination. Sixteen specimens were positive on cultural examination and negative with animal inoculation on the first injection.

Serological Section:

The serological section is still operating at Mimico. In the Central Laboratory in 1947 a total of 355,144 examinations were carried out on specimens of blood and spinal fluid. While the civilian and industrial specimens have increased considerably, there has been a marked decrease in the number of specimens received from the Armed Forces, due to demobilization. In addition to the

specimens noted in Table 1 under "Syphilis", chemical examinations are performed in the serological section, on spinal fluids. The lack of adequately-trained personnel has prevented any surveys being carried out in this section during the year. A preliminary serological survey was carried out for the Regional and Subsidized laboratories in the latter part of the year. This method of standardizing results in various laboratories will be extended in the coming year.

Milk and Water Section:

In previous years standard plate counts and *B. coli* counts were performed on raw milk specimens submitted to the laboratory. This year the routine was changed throughout the Division. The present routine consists of a Resazurin test on all specimens of raw milk submitted, and the triple reading method is used. All specimens grouped as Group 2, 3 and 4 by the Resazurin test are subjected to a microscopic examination and the report indicates the increase in either leucocytes or bacteria, or both, as found. The morphology of the bacteria present is reported. This routine on raw milk specimens gives the Medical Officers of Health and Sanitary Inspectors more useful information than the previous routine which was used.

Enteric Disease Section:

During 1947 a total of 25,036 examinations were carried out in the Enteric Disease section. 21,718 mls. of concentrated antigen for agglutination tests were prepared for use in the Enteric Disease section of the Central Laboratory and also the Branch Laboratories. 1,701 cc's of antisera for the identification of organisms of the *Salmonella* genus were produced and also 295 cc's of antisera for *Shigella* typing, making a total of 1,996 cc's of antisera.

As a result of Miss Crossley's visit to the laboratory of the Michigan State Department of Health in Lansing, Michigan, further work is being done on the typing of *Shigella* organisms.

An increase is noted in the number of strains of *E. typhosus* submitted to typing. Table 9 indicates the distribution of these types, the majority of which come from sources within the province. Fourteen of the organisms typed, however, came from sources in the U.S.A. As was noted last year, Types C and E were the predominant organisms.

The examination of specimens for parasitic cysts and ova is considerably increased, but as yet our parasitology service has not been widely publicized. This portion of the work is still included in the Enteric Disease section. Table 11 indicates the results of examinations carried out on specimens of feces and anal swabs for the identification of parasitic cysts or ova. Sixty-three examinations for occult blood were also performed in this section.

The Salmonella typing service in the Central Laboratory has examined 990 cultures during the year 1947. These include cultures submitted from our Branch Laboratories and also those isolated by our diagnostic group in the Enteric Disease Section. A number of cultures have also been received from points outside Ontario for identification.

Fungus Diseases:

Table 13 indicates the examinations and cultural isolations made on mycological specimens submitted. The classification of these organisms has been changed to conform with the most recent classification obtained by Mr. Fischer during his recent course. Trichophyton mentagrophytes and Trichophyton rubrum (formerly Trichophyton gypseum and Epidermophyton purpureum) continue to be the most common organisms isolated other than yeast-like organisms.

TABLE 13

183 microscopic examinations were made for the presence of Actinomyces and 264 cultural examinations performed. The distribution of these isolations is noted in Table 14. A total of 20 microscopic examinations showed mycelia resembling Actinomyces, whereas 18 cultural examinations showed the same result. Isolations made from sputum do not indicate the incidence of pulmonary actinomycosis, since information is not available whether or not these cases showed clinical evidence of the disease.

Virus Diseases:

The virus section, under the direction of Dr. N. A. Labzoffsky, has carried out 703 examinations in the diagnostic routine during the year. Research in the various aspects of virus diseases is still being carried on and it is hoped that the present problems can be terminated next year.

Media and Stains:

The section for the preparation of media and stains has been enlarged during the year, as previously the staff of the media room had worked under considerable difficulty in cramped quarters. The media produced during the year are indicated in Table 19.

TABLE 19

Outfit Preparation and Distribution:

The Shipping Room has been moved from the East Block of the Parliament Buildings to 1011 Queen St. W., where the outfit room is situated. The distribution of outfits to physicians and hospitals is indicated on the end of Table 1.

Animal Room:

A total of 4,967 animals was received during the year and of this total, 1,399 were shipped to Branch Laboratories. 3,524 were used in the East Block laboratories. Separate animal quarters are maintained for the Virus Laboratory at 1011 Queen Street West.

DIVISION OF PATHOLOGY

M. C. DINBERG, B.Sc., M.D., *Provincial Pathologist*

Herewith is submitted the annual report of the Division of Pathology for the year 1947.

Dr. H. Doris Howell attended a course in autopsy technique at the Regional Laboratory and the Victoria Hospital, London, Ontario. Gratitude is expressed to Professor J. H. Fisher and to Dr. W. M. Wilson for their co-operation in making possible this instruction.

Dr. M. C. Dinberg presented several lectures in connection with the Lakehead Summer School at Fort William and Port Arthur, during the first week of September, through the courtesy of the Ontario Medical Association.

Dr. Dinberg presented a paper "The Etiology of Sarcoidosis" to the Laboratory Section, Canadian Public Health Association, at the December meeting in Toronto.

The number of surgical and autopsy specimens submitted and examined was 11,611. Of this number, 740 or 6% were malignant tumours.

The Division of Pathology is grateful to Professor W. L. Robinson for consultant advice and to Dr. E. L. Barton for generous co-operation.

REGIONAL LABORATORY—FORT WILLIAM

A. E. ALLIN, B.A., M.D., D.P.H., *Director*

I have the honour to submit herewith the Annual Report of the Fort William Regional Laboratory for the year 1947.

Routine examinations numbered 62,206, an increase of 9.3 per cent over 1946. 6,837 vials of Biologicals, 1,763 vials of Insulin, 75 vials of Silver Nitrate, 168 vials of Old Tuberculin and 43,065 outfits were distributed.

During the year, there were numerous changes in the staff. Miss Florence Hutchinson resigned in August. Miss Beth Waller, who had joined the staff in January, resigned in October. Four workers without previous laboratory experience were employed, viz., Misses Rahmer, Mior, Smith and Baba. The training of these new employees has placed a heavy burden on the senior members of the staff. Nevertheless, a new pathology division was opened. This was made possible by the City of Fort William adding another room to the quarters origi-

nally allotted the laboratory. It permits the examination locally of biopsy and autopsy material submitted by the physicians of North-western Ontario and is of particular importance at the present time since diagnostic Cancer Centers were recently established in Fort William and in Port Arthur.

This Division was opened in April and approximately 200 specimens per month are now being submitted. The Director has made free use of Dr. Dinberg's services as consultant in the diagnosis of numerous difficult biopsies. Distance has been relatively unimportant since the advent of air-mail service, as specimens can now be mailed from this laboratory to Toronto and a wired report received the following day.

The Director was granted specialist certification in Bacteriology and Pathology by the Royal College of Physicians and Surgeons during the year.

May I express my appreciation of the loyal work of all members of the staff. I also wish to express my appreciation of the unfailing co-operation of Dr. Barton and of Dr. Dinberg throughout the year.

REGIONAL LABORATORY—KINGSTON

J. H. ORR, M.D., *Director*

I have the honour to submit herewith the Annual Report of the Regional Laboratory at Kingston for the year 1947. The total examinations for the year numbered 72,427.

This is a decrease of approximately 5,000 in the total number of examinations, as compared with 1946. This difference is attributable to the marked falling off in Serological examinations resulting from demobilization. Serological examinations decreased approximately 12,000 as compared with 1946. This, however, was partly offset by an increase in the work of the other sections which exceeded by 7,000 the number of examinations carried on in the previous year.

I should like to take this opportunity of expressing my appreciation of the loyal work of all the members of the staff of this Laboratory and the co-operation which I have received from Dr. E. L. Barton and the staff at the Central Laboratory throughout the year.

REGIONAL LABORATORY—KIRKLAND LAKE

B. M. BRANSCOMBE, M.T., R.T., *Director*

I have the honour to submit herewith the Annual Report of the Kirkland Lake Regional Laboratory for 1947.

The opening of this new branch was delayed about one year. This was due to the lack of building material to complete alterations. Laboratory equipment being also in short supply, we were unable to open until July 2nd, 1947.

Routine Urinalysis and Haematology have been the bulk of the work. This is probably due to the laboratory being situated in the hospital. Public Health examinations are slowly increasing. The total examinations for the six months was 3,975. The number of outfits distributed was 799.

The Blood Transfusion work has been quite active, chiefly due to mine accidents. The establishing of a Blood Bank has been suggested to the hospital board and it is hoped to be in operation in the coming year.

I wish to express my appreciation to Dr. E. L. Barton and the members of the Central Laboratory for their help and efficient service during the year.

REGIONAL LABORATORY—LONDON

W. M. WILSON, M.D., *Director*

I have the honour to submit herewith the Annual Report of the Examinations made at the Regional Laboratory, London, during the year 1947.

The total number of examinations made was 135,147, which is a decrease of 36,954 when compared with the total for the year 1946. This drop in volume was expected and may be explained largely by the decrease in the serological work, this division alone showing a drop of 32,413 examinations. During the year 1946 a large number of blood samples were received for serological tests from army personnel at the time of their discharge. This work showed a steady drop in the latter months of 1946 and in 1947 only a very few specimens were received from members of the armed forces. Regional and subsidized laboratories established in Windsor, Stratford and Woodstock have no doubt received specimens for examination which heretofore would have been sent to this laboratory. The decrease may be further explained by the fact that no epidemics of infectious diseases occurred during the year. In the pathological division some decrease was noted, chiefly because of the appointment of a pathologist at the General Hospital, Sarnia.

During the year 77,021 outfits were distributed to physicians and hospitals for the collection of specimens. There were also 26,404 packages of biological products and 7,207 packages of insulin distributed.

On November 1st, 1947, Mr. S. G. Trevor, bacteriologist, was transferred to Sault Ste. Marie on account of the death of Dr. N. F. W. Graham. On December 31st, 1947, Dr. W. W. Hollands resigned as pathologist at this laboratory to take the position of pathologist at the St. Joseph's Hospital, Sarnia.

I am pleased to take this opportunity to express my appreciation to Dr. E. L. Barton, Director of Laboratories, Dr. J. T. Phair, Deputy Minister, and the staff of the Central Laboratory for assistance given. I also appreciate the loyal co-operation of our staff. To the University of Western Ontario, who are contributing in good measure to make the association of the Regional Laboratory and the School of Nursing a very satisfactory and happy arrangement for both, I express my sincere thanks.

REGIONAL LABORATORY—NORTH BAY

A. D. McCLURE, B.A., *Director*

I have the honour to submit herewith the report of the number of examinations carried out in the Regional Laboratory at North Bay during the year 1947.

The total volume of the work has increased by approximately 21% over the previous year. The increase, however, has not been uniform over all types of specimens received. There has been a marked decrease in the number of milk, restaurant and gonorrhoea specimens. It may be that more of this work is being taken over by the laboratories at Kirkland Lake and Timmins.

The most noted increases in volume have taken place in serology and blood chemistry. The increase in the volume of serology is approximately 60%.

May I at this time express the thanks of the staff and myself to the Director and staff of the Central Laboratory for their close co-operation during the past year.

REGIONAL LABORATORY—OTTAWA

S. F. PENNY, M.D., *Director*

I have the honour to submit herewith the annual report for 1947 of the Ottawa Regional Laboratory.

The routine examinations totalled 122,387 for the year, a decrease of 23,802 from 1946. This reduction is mainly accounted for in the decreases in serological and diphtheria examinations. The completion of demobilization of service personnel accounts for the marked decrease in the number of serological specimens examined and the totals this year are fairly representative of normal times.

The local epidemics of diphtheria and ringworm of the scalp mentioned in last year's report were brought under control during 1947 and no new epidemics appeared in the city and district.

The laboratory distributed 60,424 diagnostic outfits, 20,176 biological products and 6,135 vials of insulin in 1947.

The laboratory has been recently redecorated by the City corporation and is much improved, although the physical set-up is the same as last year.

I wish to express my appreciation to our staff and to Dr. Barton and the staff of the Central Laboratory for their co-operation during the year.

REGIONAL LABORATORY—SAULT STE. MARIE

S. G. TREVOR, B.S.A., *Director*

I have the honour to submit herewith the Annual Report for this Regional Laboratory for the year 1947.

The death on October 23rd, 1947, of Dr. N. F. W. Graham, who was Director of this laboratory since October, 1920, was a great loss to the laboratory service and to the community. The high esteem of his laboratory staff and the City at large bears tribute to a great personality and an untiring worker.

The total number of examinations for the year was approximately 1,500 less than in 1946. The number of diagnostic outfits distributed was approximately 1,200 more than during the preceding year, indicating that the volume of work for the district is increasing, but is not being done at this laboratory. It is hoped that, when the present re-organization is completed, all the tests for this district will be performed at this laboratory.

The problem of limited space will be greatly alleviated by the shortly to be accomplished removal from the laboratory of the V.D. Clinic and the Red Cross Blood Donors' Clinic; also by plans at present under consideration to allot some additional space in this building to the laboratory.

After two years service, Miss Jean Young resigned her position as Laboratory Assistant on May 31st, 1947, to accept a post at a Sarnia Hospital. The vacancy thus created was filled by Miss Elizabeth McNamara.

I wish to express my sincere appreciation to Dr. Barton, the staff at the Central Laboratory and to the staff of the Sault Ste. Marie laboratory for all the help I have received.

REGIONAL LABORATORY—TIMMINS

G. MACPHERSON, B.A., M.A., *Acting Director*

I submit herewith a report of the work performed in this Laboratory for the year 1947.

There has been an increase in the total examinations from 9,709 to 11,494. Comparison with previous reports shows a continuation of the marked increase in bacteriology. Indeed, lack of space is our most pressing problem and is retarding further expansion in all departments.

May I express my appreciation to Dr. Barton and the staff of the Central Laboratory for their co-operation throughout the year.

REGIONAL LABORATORY—WINDSOR

W. J. A. PERCY, M.A., *Director*

I have the honour to submit herewith the Annual Report of the Windsor Regional Laboratory for the year 1947.

The Windsor Regional Laboratory was established in 1946, but it was not until the official opening of the new quarters by the Honourable Russell T. Kelley on March 22nd, 1947, that this laboratory was in a position to offer full services to the physicians of the City of Windsor and district.

During the year 1947 a total of 57,626 examinations was made, of which approximately 70% were serological examinations. This total represents about ten months of operation during which it was possible to perform all examinations, plus two months during which only a limited number of tests could be done.

The physicians of this district are not yet making full use of the facilities of this laboratory for bacteriological examinations. A great many of these tests are still being done at the three laboratories situated in hospitals in Windsor. This accounts for the small percentage of miscellaneous bacteriological examinations performed at this laboratory.

Due to the increased volume of work, the staff was increased by the addition of three members. One staff member resigned to take a position in the U.S.A. His place has not yet been filled.

I wish to thank the staff of this laboratory for their untiring efforts in helping to establish our services. My sincere appreciation is extended to Dr. E. L. Barton and the staff of the Central Laboratory for their advice and co-operation during the year.

SUBSIDIZED LABORATORY—BELLEVILLE

J. B. MCKAY, M.D., *Director*

The attached report is a record of the kind and number of laboratory studies carried out in this laboratory during the year 1947. It has been compiled according to the instructions issued early in 1947. As such, it indicates somewhat less than one quarter of the total number of all tests performed here, during the past year. It emphasizes the so-called "free routine" which reveals an increase over that of 1946.

The facilities for milk and water analysis have been used frequently by neighbouring county health units and by the local health department.

We wish to express our sincere appreciation to the personnel of the Central Laboratory and the Kingston Unit, for their continued co-operation.

SUBSIDIZED LABORATORY—KITCHENER

L. C. FISCHER, M.D., *Director*

I have the honour to submit a report of the work done in the Kitchener-Waterloo Laboratory for the year 1947.

Unfortunately, owing to difficulty in getting new essential equipment and help, we were severely handicapped and unable to really start functioning until March, 1947. Consequently, public health work done for January and February was almost nil.

The official opening of the Laboratory, February 28th, 1947, was, we believe, really an event. We appreciate very much Dr. Barton and his staff coming to us and putting on a very fine scientific demonstration—making possible our official opening at that time

We have received some very nice equipment, and have now, we believe, the nucleus of a good staff. Thanks to Dr. Barton we were able to secure the services of a trained Bacteriologist, in the person of Mr. Ernest Brown. Our staff, at the present time, consists of seven full-time and one part-time assistant, and we are at present negotiating the services of another trained technician.

The free tests done during 1947 total 11,072, Bacteriological tests constituting slightly over 4,000 tests, Kahn tests 6,298 and blood sugars 448.

I should like to take this opportunity of thanking Dr. Barton and his staff for the kindness and help they have so generously bestowed on us.

SUBSIDIZED LABORATORY—PETERBOROUGH

C. B. WAITE, M.D., *Director*

I have the honour to submit my Annual Report for the year 1947.

During the year, there has been no epidemic of infectious diseases. The agglutination test for the enteric group, etc., has shown a falling off. A few Salmonella, however, have been isolated, some of them in cases of clinical enteric diseases. Since the introduction of examination of pregnant women, there has been an increase in the number of Kahn tests, as was to be expected.

The activities of the Sanitary Inspector gives rise to some examinations of restaurants and beverage room utensils. This has not been done for a year or two previously.

There has been some falling off in the number of post-war cases of gonorrhoea. It appears to have passed its peak in this district.

All of which is respectfully submitted.

SUBSIDIZED LABORATORY—ST. CATHARINES

L. WHITAKER, M.D., *Director*

Submitted herewith is the Annual Report for the Subsidized Laboratory, St. Catharines, for the year 1947.

In looking over the totals of examinations, as compared with last year, there is a good deal of difference, with the implication that the work has decreased considerably. Actually this is not the case, the decrease being due to the elimination of surgicals, autopsies and blood smears which were formerly included, but which are left out as they fall within the category of examinations which are ordinarily done in a hospital laboratory.

In reviewing the work of the year, there have been some changes in our staff. New personnel added brings our total to four full-time qualified technicians, two qualified part-time and one stenographer and secretary. In addition, three students have been taken for training. It is hoped that the hospital will be recognized as a training unit so that at the end of the year these students may try their examinations to qualify as technicians with the Canadian Society of Laboratory Technologists.

This letter would not be complete without reference to the much enlarged and improved quarters in which the laboratory is now functioning. We feel that this should contribute to a much more efficient service.

The past year saw the introduction of examinations of unpasteurized milk samples. This service was not instituted until late in the year and with the continued co-operation of the Sanitary Inspectors it is hoped that the public may receive further protection in this regard.

In closing I should like to express my personal appreciation to you and the various members of the Staff of the Central Laboratory for the very helpful manner in which they have aided in making the service of the Laboratory here of optimum value in serving the two counties.

SUBSIDIZED LABORATORY—STRATFORD

S. J. C. MILLER, M.D., *Director*

The statistics for the Stratford General Hospital Branch Laboratory are herewith submitted for the year 1947.

Total examinations for the year numbered 24,049, of which 11,948 came under the free routine and 12,101 under the charge routine.

The laboratory did not really begin to operate as a branch laboratory until July, because of slowness in delivery of essential equipment, the majority of which has finally been installed.

Our staff has been increased by the addition of Miss Irene McDonald, Miss Kay Wilkie and Miss Marion Smith. However, we still urgently require one well-trained technician.

One of the highlights of the year was the official opening of this laboratory by Dr. E. L. Barton and staff of the Central Laboratory at a special meeting of the Perth County Medical Association. The exhibits were outstanding and well received.

We have had excellent co-operation from the Central Laboratory in Toronto, and the Regional Laboratory at London, Ontario. I am especially indebted to Dr. E. L. Barton, Dr. W. Wilson and Miss L. Venus for their assistance and guidance on numerous occasions.

SUBSIDIZED LABORATORY—WOODSTOCK

R. H. KARN, *Director*

I wish to submit herewith the Woodstock Laboratory report of procedures completed and diagnostic outfits distributed during 1947.

In addition to our regular work, for the Woodstock and Oxford County Health Units, Physicians and Ontario Hospital, we have extended our services to the Branch County Health Unit and Brant Sanatorium, Brantford.

One extra room has been taken over by the laboratory as we propose adding a serological section in the near future.

May I express my gratitude to all connected with this laboratory for their suggestions and excellent co-operation.

REPORT OF THE LIBRARY

FREDRITA HENLEY WRIGHT, *Librarian*

The year 1947 has been a very busy one. In addition to requests for literature, made by the departmental staff, the Library received approximately 220 personal enquiries from non-members of the Department. The Library has endeavoured to meet all requests to the best of its ability. New publications and special reports have been procured on publication and bibliographies and reference material supplied when required.

Six meetings of the Library Committee were held during the year to assist in the administration of the Library and to approve the purchase of literature.

LOAN SERVICE

There were 7,369 loans made by the Central Library during 1947, an increase of 2,331 over the previous year. Within the immediate department, requests for literature reached a total of 5,907, while to the outside service the Library forwarded 1,462 references. The loan service from the Central Library is extended to: physicians, psychologists, nurses, occupational therapists, dietitians and farmers connected with the administration of the 15 Ontario Hospitals; the Directors and staffs of Mental Health Clinics and the Directors and staffs of Branch Laboratories and Tuberculosis Clinics.

CIRCULATION OF JOURNALS

Circulation of journals was maintained during the year. Journals were circulated to the clinicians in charge of the Provincial Travelling Chest Clinics at Belleville, Ottawa and Timmins and to the Tuberculosis Unit at the Ontario Hospital, Woodstock.

Journals containing articles dealing with "shock therapy" in the treatment of mental disease continued to be circulated immediately upon receipt, to the Ontario Hospitals administering this treatment. The Library increased its service to hospitals during the year by circulating journals on dietetics to dietitians and by circulating journals on dairy science to the herdsmen and farmers on the staffs of the hospitals.

The Branch Laboratories at North Bay, Ottawa, Kingston, Belleville, Fort William, Kirkland Lake, St. Catharines, Windsor and Mimico received regular circulation service of technical journals and during the year the new branch laboratory at Stratford was included.

PATIENTS' LIBRARIES

Through the services of the Central Library the following reading material was procured for the patients' libraries in the Ontario Hospitals:

Books—The Central Library personally selected 494 library discards which were delivered to the Library where they were packed and re-shipped to the hospitals. Of this number, 37 copies were especially procured in the French language for the use of French-speaking patients.

Periodicals—The Central Library placed 189 subscriptions to periodicals for the exclusive use of the patients. There were also over 7,000 copies of unsold periodicals delivered by a Toronto News Agency. These were purchased by special arrangement made by the Central Library.

The Ontario Hospital at Fort William also was supplied with unsold periodicals by a local News Company. This service was donated to the hospital and was very much appreciated.

Newspapers—The Central Library placed 156 subscriptions to various Provincial newspapers for the sole use of the patients.

SPECIAL SERVICES

The Library was requested to assist in a book display at the conference of full-time Medical Officers and Nursing Supervisors of County Health Units, held in January. The exhibit was much appreciated.

The Central Library also compiled and distributed to all medical personnel in the Ontario Hospitals a list of library accessions. This service was provided twice during the year and in response to it an increased number of books were requested on loan.

In addition to books purchased for the Library, the Central Library also bought 229 books and pamphlets for the use of separate Divisions within the Department.

ACCESSIONS

The accessions to the Library for the year 1947 were as follows:

CENTRAL LIBRARY	
Books purchased	82
Journals (vols.)	155
Reports	148
Pamphlets	1,431

Subscriptions to journals for the year numbered 142 while the Library received 23 complimentary subscriptions, making a total of 165.

ONTARIO HOSPITALS	
Books purchased:	
Medical	222
Fiction (library discards, 37 in French language)	494
Journal subscriptions (med. and tech.)	198
Year Books	9
Periodicals:	
Subscriptions	189
Unsold copies	7,000 (approx.)
Newspapers (subscriptions)	156

During the year a list was compiled of 303 old books with a view to ascertaining an appropriate method that might be determined for their disposal. Copies of the list were submitted to the Provincial Universities for their selection of any volumes in which they might be interested. In addition to the above, the library maintained the regular routine of cataloguing and other library procedure.

The Library has had pleasure in making the above contribution to the work of the Department.

DIVISION OF MATERNAL AND CHILD HYGIENE

E. R. WESTMAN, M.B., D.P.H.

The 1946 amendment to The Public Health Act which makes provision for one free complete prenatal medical examination during the course of pregnancy has been in effect for sufficient time that it is now possible to report its functioning for its first calendar year. During 1947 this privilege was utilized by something over 40 per cent of expectant mothers in Ontario. It might therefore be deducted that to a gratifying extent expectant mothers in the Province have been made to realize the wisdom of placing themselves under medical supervision in the prenatal period. In the main, the plan has been well received by practising physicians. As may be observed in the following Tables, the service has been widely utilized throughout the Province, and its popularity well sustained.

TABLE 1

EXPECTANT MOTHERS IN ONTARIO RECEIVING PRENATAL MEDICAL EXAMINATIONS AS PROVIDED BY SECTION 74(a) OF THE PUBLIC HEALTH ACT

By Counties—January 1st, 1947 to December 31st, 1947

Algoma	363	Grenville	136	Manitoulin	15	Rainy River	1,499

TABLE 2

THE NUMBERS OF EXAMINATIONS FOR WHICH PAYMENTS WERE MADE TO PHYSICIAN BY MONTHS DURING 1947

January 1st, 1947, to December 31st, 1947

1947	Patients
January	3,587
February	4,401
March	3,015
April	3,826
May	4,223
June	3,356
July	3,092
August	3,412
September	2,931
October	4,981
November	3,062
December	3,016
TOTAL FOR YEAR	42,902

The Division is pleased to report the continuance of the downward trend in maternal deaths. In 1946 a new low of 160 (preliminary figure) was reached giving a rate of 1.64 per thousand live births. This decline was particularly evident in the reduction in the number of deaths attributed to hemorrhage, with those due to infection and, to a lesser extent, accidents, sharing in the improved picture. On the other hand, deaths attributed to toxæmias showed a slight rise. Comparison with 1945 numbers and rates is shown below (1946 preliminary figures).

MATERNAL DEATHS Principal Causes	1945	1946	RATES PER 1,000 LIVING BIRTHS	
			1945	1946
			Living births.....	78,974
Maternal Deaths—Total.....	171	160	2.17	1.64
Infection.....	46	38	.58	.39
Toxaemias.....	24	34	.30	.35
Accidents.....	26	28	.33	.29
Hemorrhage.....	33	16	.42	.16
Abortion with mention of infection.....	18	16	.23	.16
Abortion without mention of infection.....	4	9	.05	.09
All other causes.....	20	19	.25	.19

As will be noted deaths due to hemorrhage dropped to fourth place, exchanging places with toxæmias. This drop might well be the result of the continued development of blood banks and plasma supplies, together with a better understanding of the management of these patients. That infection showed a decline at all is indeed a tribute to all concerned, as available hospital space and staff have not kept pace with the increased number of births. Commendable attention to detail must have been observed under the trying conditions of short staff, and accommodation often makeshift and frequently a compromise with what might be desired.

The increase in deaths attributed to toxæmias would seem to indicate a continued need to impress upon the women of Ontario the necessity of early and adequate prenatal care if deaths from these causes are to be controlled. Only in this manner can early recognition be assured and corrective measures be instituted.

Infant deaths also have shown a satisfactory decline. As may be seen in the accompanying Table the decline in rates continued to be largely in the age group, one month to one year. Stillbirths and deaths in the neonatal period (under 1 month), although showing a diminishing trend, have not kept pace with those of the older group. Tables 3 and 4 show live births, stillbirths, infant and neonatal deaths in numbers and rates from 1931 to 1946.

Much has been written concerning the role of nutrition and infection as they affect the expectant mother during the prenatal period and their influence on the outcome of pregnancy, principally with respect to stillbirths and congenital malformations. Advances in obstetrics and surgery have also indicated that much can be done to reduce the number of deaths from these two causes. Further studies of the Rh factor have resulted in a better understanding of its mechanisms and to an encouraging extent the possibilities of treatment of affected infants.

During the course of the year the Department Publication "The Baby" was revised and in spite of difficulties encountered it is hoped that its distribution will begin early in the New Year.

As in previous years in cooperation with the Department of Education, direction was given to the medical examination of applicants in the nine Teacher Training Schools in the Province. Similar provision was made for two summer courses.

The Advisory Service to Newborn Nurseries and Obstetrical Units of Public Hospitals has been continued.

TABLE 3
LIVE BIRTHS, STILL BIRTHS AND INFANT DEATHS IN ONTARIO BY YEARS 1932-1946 INCLUSIVE

DIVISION OF NURSES REGISTRATION

EDITH R. DICK, Reg. N., *Director*

I have the honour to submit the following report for 1947:

Council of Nurse Education:

The Council of Nurse Education held five meetings during the year. At the Annual Meeting on March 21st, 1947, Miss Constance Brewster of Hamilton was re-elected Chairman.

The Executive of the Registered Nurses' Association of Ontario met jointly with the Council of Nurse Education on June 20th to consider the proposed regulations under The Nurses Act, 1947.

Legislation:

The Nurses Act, 1947, was passed. The new Act consolidated the amendments to The Nurses Registration Act, R.S.O. 1937, and provided for the establishment of training courses for nursing assistants and the registration of Certified Nursing Assistants.

Personnel:

In March, Miss N. Margaret Dulmage was appointed as Inspector to supervise the training of Nursing Assistants.

Honoraria to Graduate Nurses:

The shortage of qualified instructors and supervisors in schools of nursing has given concern for several years. Therefore, the Department of Health offered bursaries to graduate nurses for post-graduate work in Nursing Education at universities in Ontario. Seventeen bursaries were awarded. The bursary consists of \$60.00 monthly, throughout the university term of eight months. The recipients have agreed to accept a teaching position in schools of nursing in Ontario for two years.

Registration Examinations:

Examinations were held in May and November for 1,522 candidates.

Applicants Registered from other Provinces, States and Countries:

During the year 247 applicants were registered from other Provinces, States and Countries as follows:

Alberta.....	13	California.....	2
British Columbia.....	18	Illinois.....	2
Manitoba.....	29	Massachusetts.....	2
New Brunswick.....	11	Michigan.....	3
Nova Scotia.....	12	New Hampshire.....	1
P. E. Island.....	3	New Jersey.....	3
Saskatchewan.....	20	New York.....	11
Quebec.....	50	Ohio.....	4
	—	Missouri.....	1
	156	Pennsylvania.....	2

REPORT OF INSPECTOR OF TRAINING SCHOOLS FOR NURSES

DOROTHY G. RIDDELL, REG. N.

Number of approved schools of nursing in Ontario.....	64
Number of inspections made in 1947. Total.....	54
(Routine—35. Brief—19)	

The inspection and evaluation of schools of nursing in Ontario is one of the major responsibilities of the Inspector of Training Schools. In order to attain a more objective appraisal and in order to facilitate the work of the Inspector the Annual Report, which also serves as an application for renewal of approval, has been revised. For the same purpose an analysis of the Registration Examination for November, 1946, has been made by the Medical Statistics Branch.

This contains a range of marks for each school (designated in code number) and for the 977 students who wrote the examination. These marks are compared in a graphic form with other schools.

Schools of Nursing Approved for Registration:

The Metropolitan School of Nursing, Windsor, has been added to the list of approved schools in Ontario. The Canadian Red Cross Society has assisted financially in the establishment of this School in order to demonstrate that an independent type of school under controlled conditions can train nurses adequately in a period of time less than three years.

In June, 1947, the Council of Nurse Education approved for registration the School of Nursing at the Galt General Hospital.

Incidence of Illness Amongst Student Nurses:

The incidence of illness for student nurses from November, 1946, to October, 1947, shows that the greatest number of days lost per student per month was .81 for March and the least number of days per student was .43 in June.

Enrolment of Student Nurses:

The objective and actual enrolment of new student nurses in each school of nursing was the basis of an inquiry made in August, 1947. A study of the complete response to the inquiry was made by the Medical Statistics Branch. Dr. Sellers, in his study, shows that the trend of student nurse enrolment for the past three years is moderately upward. The enrolment in the fall class of 1947 was 33.7% greater than in 1945 and 11.7% greater than in 1946. Although the enrolment in schools of nursing has increased during the year the public general hospitals were 9.7% below their objective enrolment. At the same time the student enrolment for the Ontario (mental) Hospitals was only one quarter of their objective.

The data of this inquiry indicated that 14 of the 18 schools of nursing in large centres expected to achieve their enrolment objective while in contrast only 15 of the schools in smaller and non-university centres anticipated the desired number of students.

The residence accommodation was the principal limiting factor associated with the setting of the enrolment objective. The schools of nursing in the larger centres recorded that the limiting of the enrolment objective was governed by the residence accommodation factor. The smaller schools commented on the lack of qualified applicants.

Improved Living Accommodation for Student Nurses:

The Nurses' Residence, St. Joseph's Hospital, Peterborough, was opened during 1947. The sixty-bed addition to the Nurses' Residence, Victoria Hospital, London, has relieved the overcrowding in this centre. Several hospitals are now increasing their residence capacity while two schools of nursing at St. Joseph's Hospital, Guelph, and Hotel Dieu Hospital, Kingston, have residences under construction.

Psychiatric Nursing:

A major consideration during the year was that of psychiatric nursing. The Superintendents of Nurses in the general hospital schools and the Ontario (mental) Hospital schools in central Ontario met in March to arrange for the Ontario Hospital student to have affiliation in the general hospital in the second year rather than in the third year. At this meeting an attempt was made to make the course of instruction and records more uniform.

There is an increasing demand for psychiatric nursing as a basic experience for every student nurse. This can only be met by long term planning to increase the teaching personnel in the mental hospitals; to make more residence accommodation available; and to relieve the student in the general hospital of her nursing duties so that she may study psychiatric nursing for a three-month period.

Experience in Community Nursing for Student Nurses:

An observation period for all student nurses in community nursing was the purpose of joint meetings in Peterborough, Guelph and Brantford.

The Supervisors of Public Health Nursing, Victorian Order Nursing, and the Inspector of Training Schools met the Superintendents of Nurses and Instructors to discuss the objectives and details for providing valuable observation in community nursing.

Manual in Venereal Diseases for Instructors and Student Nurses:

An excellent manual and other teaching material were prepared by the Division of Venereal Disease Control. These were approved by the Council of Nurse Education in March, 1947, and were distributed to all schools of nursing.

REPORT OF THE INSPECTOR OF COURSES FOR
NURSING ASSISTANTS

N. MARGARET DULMAGE, REG. N.

The nine-month course for Nursing Assistants which was inaugurated in September, 1946, by the Departments of Health and Education has been developed successfully. There has been an increased number of enquiries and applications. The training facilities at the three centres, Hamilton, Kingston and Toronto, have been utilized fully. A total of 264 trainees were enrolled in three classes, January, April and September. Eighty-two (82) withdrew for such reasons as health, home and personal problems and inability to achieve the required standards of the course. The generous assistance received from the Canadian Vocational Training Centres has been gratefully accepted by this Department.

Curriculum:

As the initial purpose of the course is to produce a trained worker to supplement, not substitute, the graduate nurse, the curriculum has been carefully planned and controlled.

The first three months are spent in the training centre where the trainee receives 480 hours of instruction, practice, observation and study. Detail of the curriculum is outlined by the Registered Nurses' Association of Ontario in their plan for training of Nursing Assistants as of June, 1946. The last six months are spent in hospital training under supervision. The first period of three months

is spent in hospitals for the chronically ill patient. The second period of the three months is spent in general hospitals in the care of the convalescent and subacutely ill patients including three to four weeks with children.

Throughout, the trainee receives \$60.00 a month, uniforms and travelling expenses to the centre.

The practical work has been received in the following hospitals:

Hamilton	St. Peter's Infirmary. Hamilton General Hospital. St. Joseph's Hospital.
Kingston	Kingston General Hospital. Hotel Dieu Hospital.
Toronto	Queen Elizabeth Hospital. Runnymede Hospital. Toronto General Hospital. Toronto Western Hospital. Hospital for Sick Children.

A few trainees from each centre received one month's experience with children in the Ontario Hospital, Orillia.

Registration Examinations for Certified Nursing Assistants:

Three examinations were held in May, September and December. The report on practical work from the hospitals forms three-fifths of the final grade. 193 candidates sat for the examination and were from:

(1) Prince Edward County Hospital, Picton	6
(2) Mountain Sanatorium, Hamilton	23
(3) Government Training Centres: Toronto, Hamilton and Kingston	164

The total number registered on December 31st, 1947, is 110. Based on age and education there were no marked differences in class standing according to an analysis of the results of the examinations in May and September.

Personnel:

The personnel is composed of well qualified nurses, all of whom have contributed to the course in an excellent way. This group has participated regularly in staff education.

The staff is now as follows:

Hamilton—	Mrs. R. A. Whitty, Chief Instructor. Mrs. F. M. Duxbury, Assistant Instructor. Miss B. M. Davidson, Hospital Supervisor. Mrs. F. Meyer, Hospital Supervisor.
Kingston—	Miss E. P. Atcheson, Chief Instructor. Mrs. R. M. Johnson, Assistant Instructor. Mrs. H. V. McLean, Hospital Supervisor.
Toronto —	Miss J. F. Young, Chief Instructor. Miss W. P. Bell, Assistant Instructor. Miss M. E. Ball, Hospital Supervisor. Miss R. Hickson, Hospital Supervisor. Miss A. C. Tavener, Hospital Supervisor.

Health Services:

Before entrance to the training centres the applicants are required to have a satisfactory medical recommendation from their family doctor. During the first month the trainees receive a thorough health examination including physical examination, immunizations, tests and chest x-rays. Weight and illness are recorded throughout the entire nine months. In the last month the trainee receives a complete medical examination which is valuable for the welfare of the centre as well as for the trainee.

Municipalities Represented:

Trainees have come from 21 cities, 33 towns and 156 rural communities. From the inception of the course to January 27th, 1948, there has been a total enrolment of 469. So far 73% of this enrolment has been retained.

Vocational Guidance:

At the conclusion of the course considerable time is spent interviewing the trainees to advise them in regard to procuring employment. It is possible at this time to sum up the proper prospectives and to correct any misunderstandings in the mind of the trainee and to stress the importance and value each nursing assistant may be to her respective community especially in helping to overcome the shortage of trained nursing personnel in hospitals.

Estimation of Usefulness:

Graduate Nursing Assistants are now working in more than fifty hospitals in Ontario, a few are with the Toronto Branch of the Victorian Order of Nurses, a few with the community registries are engaged in private duty and a few are free lance.

Some of the hospitals are listed below:

Peel Memorial, Brampton; General, Brantford; General, Brockville; St. Joseph's, Chatham; International Nickel, Copper Cliff; Haldimand War Memorial, Dunnville; Groves Memorial, Fergus; Douglas Memorial, Fort Erie; McKellar General, Fort William; General, Galt; General, Hamilton; Ontario Hospital, Hamilton; Mountain Sanatorium, Hamilton; St. Joseph's, Hamilton; St. Paul's, Hearst; Hotel Dieu, Kingston; Ontario Hospital, Kingston; Convalescent, Kitchener; Kitchener and Waterloo, Kitchener; St. Mary's, Kitchener; General, Kincardine; Ross Memorial, Lindsay; Victoria, London; Workmen's Compensation, Malton; St. Andrew's, Midland; General, Niagara Falls; Civic, North Bay; Ontario Hospital, Orillia; General and Marine, Owen Sound; Cottage, Pembroke; General, Pembroke; General, Port Arthur; Braeside Home, Preston; Red Cross Outpost Hospitals; General, Sarnia; Plummer Memorial, Sault Ste. Marie; Hospital for Sick Children, Thistletown; Soldiers' Memorial, Tillsonburg; Hospital for Sick Children, Toronto; General, Toronto; Our Lady of Mercy, Toronto; Queen Elizabeth, Toronto; Rynnmede, Toronto; Wellesley, Toronto; County of Bruce General, Walkerton; Ontario Hospital, Whitby; Metropolitan, Windsor; General, Wingham; General, Woodstock; Ontario Hospital, Woodstock; and the Orphanage, Woodstock.

It would be premature to comment on the success of this new worker in the community until more have completed the course and they have had sufficient time to demonstrate their usefulness. However, the first reports from employers have been most encouraging.

DIVISION OF PUBLIC HEALTH NURSING

EDNA L. MOORE, Reg.N., *Director*

For the first four months of the year the Division staff included ten public health nurses and three stenographers; one member of the supervisory staff was on leave-of-absence for study and one was loaned to a Health Unit as Acting Supervisor; April 1st, Bertha E. Johnson and Rose Hally retired; July 21st Edna Squires returned from the Prescott and Russell Health Unit, and July 2nd Marjorie A. Rutherford reported for duty, having successfully completed the Advanced Course in Administration and Supervision at the University of Toronto School of Nursing.

Miss Johnson and Miss Hally were pioneers in public health nursing. The former joined the Department of Health staff through a transfer from the Department of Education in 1924 when the health services of the Government were amalgamated. She engaged in the demonstration programme of that period and was particularly successful in gaining the interest and confidence of communities which resulted in the establishment of local public health services. When the first Health Unit was inaugurated, Miss Johnson participated in the service. Later she joined the supervisory staff; in this capacity, she became known to health workers in most parts of the Province and she contributed substantially to the extension and development of public health nursing service.

Miss Hally was one of the original group of nurses, who in 1920 went into the Province to demonstrate public health nursing. She worked largely in the eastern and northern areas. Her skill in emergencies was well tested under difficult epidemic and disaster conditions in the Temiskaming and Cochrane Districts. She was associated with the Civil Service Health Service at its inception.

Since April 1st, Hilda G. Pennock has combined the work of Assistant to the Director and Regional Supervisor for a smaller area.

During 1947 the Educational Supervisor, Alice G. Nicolle, made 27 visits to 18 centres for the discussion of staff education plans, secondary school health service, student field practice, and to talk with public health nurses who recently completed the certificate course under the Department's Assistance Plan.

She also visited the Schools of Nursing of Queen's and McMaster and the Universities of Ottawa, Toronto, and Western Ontario. In connection with the Assistance Plan she gave thirty-two hours of teaching and spent many days in conference with individual graduate students. In addition all applicants for assistance were interviewed by the Educational Supervisor and the Director.

Miss Nicolle cooperated with the Nurse Registration Division in planning conferences in several centres with local hospital schools of nursing, representatives of the National and local Victorian Order of Nurses and the municipal public health nursing supervisors for the purpose of discussing objectives and methods for observation with the public health agencies by under-graduate students. Enquiries relating to many topics and requiring the organization of reference material and lengthy replies were dealt with by Miss Nicolle in increasing numbers.

Isabel Black, Regional Supervisor for Northern Ontario, suffered a severe injury in June. She returned to duty completely recovered in October.

While the supervisory staff was larger than in 1946, the activities of two supervisors were for six-month periods and of one for a three-month period, while a fourth was absent through illness for three months. In all 462 days were spent in the field, visiting 111 centres, representing 442 nurses. Time spent in the Division office was higher than in previous years. The results, however, are gratifying, namely the preparation of a Manual and discussion of the approach to the changing situation of the present. Also 168 days were devoted to special activities. Under this heading are included conferences with workers in allied fields, mainly education and social work, attendance at meetings of boards of health, committees, women's institutes and home and school associations.

At the request of the local Board of Health, Katherine E. Osborne made a survey of school conditions in the township of Sandwich West. The generalized public health nursing service established in August, was largely the outcome of the survey. Miss Osborne relieved the Senior Public Health Nurse of Halton County School Health Service for three months. She spent five weeks at Barrie in October and November at the request of the Boards of Health and Education, and two weeks with the Welland and District Health Unit in December. The reason for the two latter assignments was the existence of communicable disease.

The secretarial and stenographic work of the Division was considerably greater than in any previous year. In addition the staff was handicapped during the period of moving from the fifteenth floor to the present location on the fourth floor. The accomplishments were made possible by the splendid spirit of co-operation which is gratefully acknowledged.

Muriel V. Lowry represented the Division at the Canadian Public Health Association Convention held in Quebec City in May, and presented a paper before the Nursing Section.

In October Alice G. Nicolle attended the American Public Health Association Convention in Atlantic City.

Miss Elizabeth L. Smellie, C.B.E., R.R.C., LL.D., who has served the Department as Honourary Consultant in Public Health Nursing since 1935, retired from her post as Chief Superintendent, Victorian Order of Nurses for Canada, in May. Shortly afterward she left Ontario to live in British Columbia. Her going is a great loss to the Department and to the Division of Public Health Nursing in particular. From her broad experience, she was able to give wise counsel and constructive suggestions and she responded unstintingly to every request.

Since only five public health nurses could be secured to assist with the medical examinations of applicants to the Normal School and the College of Education, six members of the Division staff assisted with this activity to the extent of 49 days.

During the year five Health Units, one municipal generalized public health nursing service and one joint municipal school nursing service came into existence. The County of Halton and the United Counties of Lennox and Addington changed from the County School Health Service to the wider programme of the Health Unit. The East York-Leaside Unit was formed through a union of two active services, while the Counties of Kent and Leeds and Grenville had no

previous public health nursing service. It was necessary to recruit the entire staff for these Units and the municipal services in Sandwich West and Vaughan, Richmond Hill and Woodbridge.

The nursing staff needs of the new services, the extensions of existing services, and replacements necessitated through promotions, resignations, retirements and leaves-of-absence for study made heavy demands upon the available qualified public health nurses, however, the situation was met to a degree beyond our expectations. Of the 714 positions for public health nurses only 42 remained unfilled at the close of the year.

Because of the widespread interest in Health Unit organization and the many enquiries received by the Department, the Director made numerous field trips to discuss details of organization, administration and procedure as well as nursing staff requirements, while not a few office conferences were of a similar nature and a great deal of correspondence was associated with the same field of enquiry.

Of the 25 nurses who were enrolled at the beginning of the year for the certificate course under the Department's Assistance Plan, 24 were successful. They accepted positions throughout the Province. Six public health nurses successfully completed the Advanced Course in Administration and Supervision and one of the number secured the degree of Bachelor of Science in Nursing. They have accepted positions of leadership and responsibility. There was one failure in each course.

In September, twenty-two registered nurses entered upon the certificate course and seven experienced public health nurses began the Advanced Course under the Assistance Plan. The monthly allowance was raised to Sixty Dollars because of increases in university fees and in the cost of living.

Nineteen experienced public health nurses from fifteen official health services and four Division supervisors have pursued the four-weeks' course in Psychiatric Methods offered by the Toronto Psychiatric Hospital since March 1st, 1946. The expressions of gratitude for the opportunity and commendation for the course were general.

An Outline of General Procedures with considerable detail relating to certain phases of public health nursing was prepared in loose-leaf form and sent to local agencies as the basis for a Manual. A wide range of topics on which information would be desirable was shown in the suggested index. From time to time additional material will be prepared and distributed. Meanwhile each local service may add its own policies and procedures to meet the needs of the community served.

A Guide to the Organization of a Secondary School Health Service was developed in cooperation with other Divisions in the Department. It was reviewed by the Department of Education and will be ready for distribution early in 1948.

The Ontario Society for Crippled Children now has a staff of seven experienced public health nurses, each of whom has had special preparation in orthopaedic nursing. In December an office was opened in Windsor. As these nurses work throughout the Province in their specific field, their services as consultants are freely available to all public health nurses.

An exchange of nurses was arranged between the Metropolitan Health Committee of Greater Vancouver and the Elgin-St. Thomas Health Unit. One staff nurse from each agency reported to the other agency in July for a one-year period.

In the light of the wide publicity given to the "shortage of nurses," reference to the excessive number of resignations in certain services is an obligation. Industrial management has shown the value of continuous service and the importance of personnel practices which will encourage long term service. Securing new staff members and introducing them to the programme is costly. In addition their work is less productive during this period. Since the problem of securing public health nurses for new and existing services weighs heavily upon the staff of this Division, it seems pertinent to indicate that unless these and other matters concerning relationships within the sphere of professional activity are approached presently and resolutely the difficulties are likely to increase.

The Division was honoured to receive the following visitors: Miss Gerda Hojer, President, International Congress of Nurses, Sweden; Miss Lise Hering, Strasbourg School of Nursing, France; A. V. Green, Esq., J.P., King George Hospital, Ilford, Essex, England; Miss Mary I. Lambie, Director, Division of Nursing, Health Department, Wellington, New Zealand; Miss Kathleen S. Wilson, Children's Hospital, Melbourne, Australia; Miss Joan Gibbins, South Africa; Miss Joy A. Alley, Director, Post-Graduate School of Nursing, Wellington, New Zealand; Miss T. K. Adranvala, J. J. Group of Hospitals, Bombay, India; Miss Martha Crawford, Cleveland, Ohio; Miss Brigitte Laliberte, Montreal Health Department, Montreal; Miss Sara Elza Norton, Woking, England; Miss Lyle Creelman, Vancouver, British Columbia; Miss Delta MacDonald, Salisbury, New Brunswick; Miss Marian M. McAfee, Saint John, New Brunswick; Miss Jenny M. Weir, School of Nursing, Queen's University, Kingston, Ontario.

DIVISION OF SANITARY ENGINEERING

A. E. BERRY, M.A.Sc., C.E., Ph.D., *Director*

The report of the Division of Sanitary Engineering for the year 1947 involves a variety of activities. There has been further progress in the post-war adjustments, making it possible to advance programmes that have been delayed for some time. Materials and supplies have been short, and prices have risen very substantially. These factors have contributed to delays in construction, but in spite of this there has been tremendous activity in waterworks, sewerage and environmental sanitation programmes.

No materially different activities have been undertaken by the Division during the year, but work has continued in the field of water supply, sewerage, refuse collection and disposal, milk processing, inspection and licensing of summer camps, supervision over some recreational facilities, licensing of frosted food locker plants, administration of cemetery regulations, advice to local health agencies, and the preparation of regulations dealing with eating establishments.

Water Works Programmes:

Widespread activity in the water works field has been witnessed throughout the entire province, and in this period 261 certificates of approval were issued for new water works or for extensions to existing plants. The estimated cost of these works was \$7,872,503.08. This is a marked increase over the expenditure for the previous year of \$5,516,258.32. This is one of the highest years of expenditures in the history of the Department. This greater amount can be attributed to increased interest in water works construction programmes, and to higher costs over those of previous years.

There has been wide interest in the small communities in undertaking water works systems, and in extending the mains in those places where systems already exist. Much of the work which had been authorized by votes of the ratepayers in the previous year was initiated in 1947. In addition to this, the following places have either voted on water works systems or have taken steps in the expectation of undertaking the work at an early date: Ripley, Norwood, Chelmsford, Caledonia, Kemptonville, Merrickville, Elora, Brussels, New Hamburg, King and Port Perry.

A most gratifying feature of the year's activities has been this interest, in the small communities, towards establishing public water works systems. It is apparent that these centres intend to secure public services wherever it is economically feasible. It is anticipated that this work will continue for some time until public supplies can be provided in all communities of 500 or more. It has been shown in these places that it is feasible for them to finance the expenditures. One favourable factor has been the very low interest rate which prevailed.

The Division has continued supervision over water treatment plants, with regular inspections being made by members of the staff. Additional personnel has made it possible to give more attention to these activities. Samples have been examined regularly in the Division's laboratory at Richmond Street, and assistance has been provided in the operation of treatment works.

Public Sewage Works.

The programme in sewage works has increased tremendously during the year, and again it is evident that the expenditures approved for the year have reached an all-time high, if the programme for the City of Toronto in a previous year was excluded. Again, some of the work approved in the previous year has been advanced, and many new programmes have been developed.

The Division has reviewed applications for approval of sewage works, and has issued 318 approvals involving an estimated expenditure of \$9,787,360.58. This may be compared with the figure of \$6,198,446.96 of the previous year. Thus, the work in this field continues to expand, and it is apparent that similar efforts are being made here as in water works, namely, to provide these public services to the maximum number of persons. The table of approvals in this report shows the municipalities in which this work has been approved. Restrictions on materials, as well as high costs, have delayed further the expansion of existing sewage treatment plants. Many of these are now considerably overloaded and will have to be enlarged in the near future. Water consumption has increased in most municipalities, and this has been accompanied by a greater flow of sewage as well as an increase in solids and organic concentration. Until these treatment plants can be brought up to standard and new ones constructed it will not be possible to exercise the desirable supervision over stream sanitation. Progress is being made but it was hampered by conditions which prevailed during the year.

During the year votes have been taken on sewage works or other preliminary action for the following municipalities: Hagersville, Milton, Port Elgin, Elora, Uxbridge and New Hamburg.

The Division has continued to give assistance and supervision over sewage treatment plants. Samples have been collected as a routine and assistance provided to the operators. It has not been feasible to provide as much attention to this part of the programme as is desirable, but with increased personnel more concentration of effort can be anticipated. All this is necessary to ensure protection of watercourses of the province, as well as safety for the citizens who come in contact with these water supplies in any form. There are now in operation 27 activated sludge plants, 8 trickling filter plants, and 44 sedimentation tanks, and 6 plants of other types, serving municipalities.

Milk Sanitation:

The same routine procedure has applied during the year in the field of milk sanitation. This involves the inspection and supervision of all milk pasteurization plants, with certification as required under the regulations. At the end of 1947 there were 686 pasteurization plants in operation.

Inspection of pasteurization plants by officials of this Division amounted to 1,283 as compared with 886 for the year 1946. This work included the collection of samples, and there were 140 farm inspections made at the special requests of the local municipality. It is believed that about 99% of all the milk sold in the province is now pasteurized under the legislation which was adopted in 1938. No additional areas were brought under this Act in 1947.

In the programme of milk sanitation it is obvious that there is need for further supervision over the raw milk supplies. If the best results are to be obtained from the milk processing plants it is necessary to ensure that the raw milk reaching

these dairies will be clean and of good quality. As yet no provincial standard has been adopted for milk production although the matter has been given consideration. Considerable improvement has been brought about by the activities of the Health Units, and as time goes on it is hoped that a greater uniformity in supervision can be expected. This is certain to bring about a higher quality of milk for the consumer.

Stream Sanitation:

Work on stream sanitation has been centred primarily on the Boundary Water Survey being conducted by the United States and Canada, and involving the St. Clair River, Lake St. Clair, Detroit River and St. Marys River. The work on this has continued and, it is expected, will be completed in 1948. This activity has meant that available personnel has had to be concentrated on it, and there has been little opportunity for doing work on other streams throughout the province. As it becomes possible to increase sewage treatment facilities there should be a noticeable improvement in stream sanitation. The objective is to ensure that all sewage and industrial wastes will be adequately treated before discharge to any watercourse. This programme is an extensive one and will require an extended period for completion.

Refuse Collection and Disposal:

Interest has increased during the year in the collection of refuse and in methods for sanitary disposal. Incineration and sanitary fill have been used with effective results. During the year approvals were given for incinerators in the following municipalities: Etobicoke Township, Kingston, Mimico and Tilbury. When these are completed there will be 27 municipalities having incinerators in operation. Several other municipalities are contemplating the construction of incinerators, or the adoption of sanitary fill, or some other sanitary arrangement. It is gratifying at this time to note the interest that is apparent in more sanitary methods of disposal of municipal refuse.

Food Sanitation:

The programme in food sanitation has been expanded during the year through the supervision of frosted food locker plants, surveys of slaughter houses, canning factories, bakeries, restaurants, and other establishments where food is processed or handled.

Licensing of frosted food locker plants, initiated in 1946, has been continued and at the end of the year there were 482 plants either in operation or under construction. 864 inspections were made of these plants during the year, and 416 licenses were issued. There continues to be a wide interest in the construction of these plants to serve the needs of the public. Considerable improvement has been made during the year in the construction of the plants and in their operation.

Regulations were passed on October 16th, 1947, for the control of eating establishments throughout the province to take effect on January 1st, 1948. These regulations set up minimum standards throughout the entire province and are applicable to all public health agencies, with technical assistance available by the Department. The regulations do not provide facilities for licensing but this continues with the municipal councils. It is expected that these regulations will bring considerable improvement in conditions in the restaurants, and will be responsible for more uniform standards in small as well as large communities.

Activity has been continued during the year in other food handling establishments. Temporary standards have been prepared for slaughter houses, and studies have been made of requirements for canning factories, bakeries, and other places in which food is handled or processed. Public interest has been maintained at a high level in sanitation needs for all food establishments, and it is expected that this work will gradually expand until the field is well covered.

Recreational Sanitation:

Recreational sanitation during the year has involved the inspection and licensing of summer camps as well as supervision over the lakeland regions. Summer camps have increased in number and the licenses issued for the year totalled 443. This work involved inspections to the number of 457. The condition of these summer camps continues to improve as camps meet the requirements in the regulations, and strive to adopt higher standards of sanitation and service.

The work in the lakeland regions has continued with two engineers being stationed at Gravenhurst during the summer. Through this activity it has been possible to exercise supervision over the Muskoka and Lake-of-Bays regions. Special attention has been given to sanitation of the lake waters, involving proper disposal of sewage, ensuring good drinking water supplies, and control over food supplies served in public places.

No inspection has been made of tourist camps since this work has been taken over by the Department of Travel and Publicity with regulations now being in force and through which licenses are required for each tourist camp. The Division has co-operated with the Department of Travel and Publicity towards better sanitation in this field.

It is apparent that in the field of recreational sanitation particular emphasis must be given to the lakeland regions where there is a great concentration of population during the summer months. Again, in these areas, summer illness has been apparent from time to time, and as yet no specific causes or treatment have been developed either in this country or elsewhere.

Nuisances and Complaints:

Complaints of nuisances continue to involve a good deal of time on the part of the staff of the Division. These requests came in to the extent of about 250 during the year. They involve requests from local Boards of Health as well as from private parties who have grievances upon which they wish assistance. Many different conditions are involved in these complaints, and while many are not of a public health nature, this can be revealed only by an investigation. This involves a good deal of travelling and time. Every effort is made to supply Health Units and local Boards of Health with technical assistance in matters of sanitation.

Assistance to Sanitary Inspectors:

During the year an effort has been made to provide assistance for sanitary inspectors in local Health Units and in other local administrations. For this purpose, Mr. H. G. Tyler has been made available as a regional adviser in sanitation, and, at the end of the year, Mr. A. S. O'Hara from Kenora has joined the staff of the Division to act in conjunction with Mr. Tyler to provide assistance to local sanitary inspectors. The objective here is to encourage activity on the part of the inspectors and to develop a more uniform system of carrying on this work.

Typhoid Fever Statistics:

During the year there were reported 77 cases of typhoid fever with 6 deaths, thus giving a death rate of 0.15 per 100,000 population for the province. The control of typhoid fever continues to be effective, with close supervision over water supplies, milk supplies, and environmental sanitation in general.

Cemeteries:

Supervision has been continued as in previous years over the cemeteries of the province. No change has been made in the regulations or legislation pertaining to these. Approvals for establishment of burying grounds or enlargements have been issued to the extent of 15. It has not yet been possible to obtain a complete list of cemeteries in the province but much work has been carried on towards bringing the cemeteries up to the requirements of the Regulations. Better rules and by-laws have been passed, and plans are being prepared for many cemeteries where these were not in good condition previously.

Laboratory Examinations:

During the year the laboratory of the Division located on Richmond Street, examined 1,939 bacteriological water samples and 269 chemical samples. The analyses for sewage included 6,970 chemical tests, along with 6,242 tests for the Boundary Water Survey. The bacteriological examinations on milk amounted to 783 samples, as well as the Phosphatase Test on 680 samples. Sanitary surveys were made in three centres with the collection of water samples and other pertinent data.

The field work carried on during the summer involved the following inspections—water supply 475, sewerage and sewage treatment 271, camps and recreational sanitation 589, milk supply 1,470, food control 1,370, and miscellaneous activities 149, making a total of 4,324 field inspections.

Appended is a summary of the certificates issued during the year in respect to water works and sewerage systems.

DIVISION OF TUBERCULOSIS PREVENTION

G. C. BRINK, M.B., *Director*

The work of the Division during 1947 has expanded considerably, principally in the increase of periodic referred clinics under the supervision of the Department's clinic centres, or of sanatoria. This has resulted in an increase in the number of clinic examinations in the departmental clinics to an all-time high. Medical staff is still lacking for the Fort William and North Bay units. In connection with the latter Dr. C. R. Rorabeck joined the staff in the fall and was assigned to North Bay as of January 1st, 1948.

During the last three months, in addition to the usual mass surveys, all immigrants from the British Isles were x-rayed upon arrival; approximately 4,000 such persons were examined. In order to inaugurate a system of securing chest films before leaving for Canada, Dr. Brink, Director of the Division, accompanied by an X-ray technician, proceeded to England the latter part of December.

The sanatorium bed situation has eased somewhat during the year with the re-opening of certain beds which were not in use because of lack of staff. Lack of building materials and money has delayed proposed additions to the Royal Ottawa Sanatorium, and the building of sanatoria at Sudbury and Kingston. Forty-seven beds were added to the Niagara Peninsula Sanatorium at St. Catharines in the late fall. At the end of the year approximately 200 persons were awaiting admission to sanatorium.

A study has been made of the existing chest clinics throughout the province with a view to improving diagnostic facilities in general. It has been found that in recent years the role of the chest clinics—viz., tuberculosis case finding and follow-up, has been overlooked in many instances; as a result the tendency is to carry many non-tuberculous chest conditions on the register. Also, many are being followed as contacts at too frequent intervals and for too long a time. The Division is stressing the necessity of a close check being kept on all clinic records with a view to eliminating those who do not fall within the province of a tuberculosis control programme. An effect is being made to screen all contacts and cases referred for the first time, by chest X-ray, only those individuals with abnormal shadowing being referred to the attending clinician for further investigation. Such a procedure would increase the efficiency of the clinic,—reducing costs and utilizing the physician's time to the best advantage.

With the assistance of various local voluntary tuberculosis committees, comprising the Ontario Tuberculosis Association, miniature film X-ray equipment has been donated to several hospitals to be used not only in ordinary chest clinic work, but also to provide facilities for the X-raying of all hospital admissions. This is a worthwhile project and in one hospital in which this programme had been in operation since July 1st, 1947, an appreciable number of cases of active pulmonary tuberculosis, as well as a significant number of non-tuberculosis chest conditions, have been discovered. It is hoped that as more equipment becomes available such a project will be inaugurated in those hospitals in which this scheme is practicable.

PART I

A

REPORT OF THE WORK DONE IN AREAS UNDER SUPERVISION
OF THE DEPARTMENT'S CHEST CLINICS

The policy of setting up referred chest clinics in hospitals or physicians' offices, where X-ray equipment is available, has been continued. These are free to those attending, the films being paid for by the local Seal Sale Committees of the Ontario Tuberculosis Association. As a result, the Department's chest clinic services are two-fold—first to interpret and report upon the films taken in these clinics, and secondly, to visit other centres in their areas where X-ray facilities are not available.

Toronto Unit

Weekly clinics were conducted in Oshawa and monthly clinics in Lindsay and Brampton, all under the Ontario Tuberculosis Association.

Ottawa Unit

(a) Periodic chest clinics, under the Ontario Tuberculosis Association, operated in Pembroke, Renfrew, Arnprior, Almonte, Smiths Falls, Perth, Carleton Place.

(b) The clinic visited Prescott, Hawkesbury, Richmond, Bourget, Plantagenet, Eganville, Casselman, Rockland, Kemptville and Cardinal.

(c) Regular monthly clinics were held in the clinic headquarters in Ottawa.

Belleville Unit

(a) Periodic chest clinics, under the Ontario Tuberculosis Association, operated in Cobourg, Port Hope, Peterboro, Haliburton.

(b) The clinic visited Brockville, Picton, Gananoque, Bowmanville, Marmora, Napanee, Trenton, Tweed, Havelock, Bancroft, Campbellford, Hastings and Madoc.

(c) Clinics were conducted daily in the clinic headquarters in Belleville.

Timmins Unit

(a) Periodic chest clinics, under the Ontario Tuberculosis Association, operated in Hearst, Kapuskasing, Smooth Rock Falls, Cochrane, Iroquois Falls and Matheson.

(b) Weekly clinics were conducted in the clinic headquarters, Timmins.

North Bay Unit

(a) Periodic chest clinics under the Ontario Tuberculosis Association, operated in Sault Ste. Marie, Blind River, Mattawa, Mindemoya, Gore Bay and Little Current.

(b) Clinics were conducted in Manitowaning, Chapleau, Batchawana, Goulais Mission, Temagami, Spanish and Sudbury.

(c) Monthly clinics were conducted in the clinic headquarters in North Bay.

SUMMARY OF NEWLY DISCOVERED CASES—TOTAL 220

- 220 new cases of tuberculosis were found.
- 141, or 63.1%, were found on first examination; 79, or 36.9%, were repeat examinations.
- 97, or 44.1%, gave a history of contact with tuberculosis; 123, or 55.9%, gave no history of contact.
- 99, or 44.6% were males; 121, or 55.4%, were females.
- 131, or 59.4%, were classed as active; 89, or 41.6%, were classed as inactive.
- Of the 97 giving a history of contact, 43, or 44.8%, were referred because of contact only and with no symptoms referable to the chest.
- 112, or 50.7%, were recommended for sanatorium; of these 25, or 22.1%, did not realize they were ill and were classified as follows:

Childhood (primary infection).....	2
Minimal.....	15
Moderately Advanced.....	5
Far Advanced.....	3

COMMENTS ON TABLE XI

1. 1,143 persons who had received treatment in sanatorium attended the clinics.
2. 561 or 49.0% were males; 582 or 51.0% were females.
3. In 103, or 9.0%, the disease by X-ray had cleared or become so well healed that it was not considered a factor at the time of examination.
4. In the 1,015 with pulmonary tuberculous disease still evident, 62 or 6.1% were considered to be active and in need of further treatment; 953, or 93.9%, were considered to have inactive disease.
5. This Table illustrates the value of follow-up examinations of ex-patients of sanatoria.

TABLE XII
CLASSIFICATION OF NON-TUBERCULOUS CHEST CONDITIONS
(Excluding Pleurisy)

Classification	First Examination	Repeat Examination	Total Examinations
Pneumonia	103	22	125
Abnormal Heart or Aortic Shadows	92	29	121
Silicosis and Effects of Dust Inhalation	39	61	100
Bronchiectasis	10	32	42
New Growth (provisional diagnosis)	13	19	32
Chronic Bronchitis	9	15	24
Asthma	5	4	9
Lung Abscess	4	3	7
Hodgkin's Disease	0	6	6
Spontaneous Pneumothorax	3	1	4
Atelectasis	0	3	3
Empyema (non-tuberculous)	2	0	2
Diaphragmatic Hernia	1	1	2
Fungus Infection	2	0	2
Cystic Disease of Lung	0	2	2
Adenopathy (cause unknown)	0	1	1
Non-tuberculous Infection	18	40	58
Totals	301	239	540

CLINIC WORK AMONG TREATY INDIANS

Examinations were carried out as follows:

- (a) Surveys of Residential Schools 254
 (b) Referred to clinics in various centres 231

TABLE XIII
RESULTS OF CLINIC EXAMINATIONS OF TREATY INDIANS

Cases of Active Tuberculosis	17
Cases of Inactive Tuberculosis	37
Newly Discovered Cases of Tuberculosis	9
*Cases Recommended for Sanatorium	7

*Ten cases classed as active were already under treatment in a hospital set aside for the treatment of tuberculosis.

TABLE XIV
COMPARISON OF CLINIC FINDINGS AMONG WHITES AND INDIANS
1943-1947

Year	Number of Examinations		Number of Cases of Active Tuberculosis		Percentage of Total Number Examined	
	Whites	Indians	Whites	Indians	Whites	Indians
1943.....	13,419	2,174	248	81	%	%
1944.....	12,644	1,171	262	26	1.8	3.7
1945.....	14,545	409	270	23	2.1	2.2

*Within five years of death.

TABLE XVI

THE AVERAGE COST OF DISCOVERING A CASE OF TUBERCULOUS DISEASE ON FIRST EXAMINATION

(Based on an average cost of \$3.07 per clinic examination)

Age Groups	Number of First Examinations	Total Cost of Examinations	Number of Cases Tuberculous Disease Discovered	Average Cost per Case	Number of Cases Discovered Requiring Sanatorium Treatment	Average Cost of Discovering a Case Requiring Sanatorium Treatment
0 to 4	289	887.23	9	98.56	3	295.74
5 to 9	591	1,814.37	11	164.94	2	907.18
10 to 14	611	1,875.77	4	468.94	2	937.88
15 to 19	987	3,030.09	16	189.38	12	252.50
20 to 24	1,123	3,447.61	18	191.53	17	202.80
25 to 29	1,044	3,205.08	15	213.67	10	320.50
30 to 39	1,549	4,755.43	16	297.21	9	396.28
40 to 49	966	2,965.62	19	156.08	8	370.70
50 to 59	638	1,958.66	17	115.21	7	279.81
60 to 69	364	1,117.48	9	124.16	1	1,117.48
70 & over	166	509.62	7	72.80	2	254.81
Totals	8,328	25,566.96	141	181.33	73	350.22

TABLE XVII

THE AVERAGE COST OF DISCOVERING A CASE OF TUBERCULOUS DISEASE ON REPEAT EXAMINATION

(Based on an average cost of \$3.07 per clinic examination)

Number of repeat examinations	7,848
Cost of this service	\$24,193.36
Number of new cases of tuberculosis discovered	79
Average cost per case	306.24
*Number cases recommended for sanatorium	121
Average cost per case	\$199.94

*Some of these were known cases who had become reactivated.

MISCELLANEOUS

1. 5,354 films were interpreted in the Central Office—

(a) 1,791 for the Civil Service Health Centre.

(b) 3,563 for Public Hospitals and private physicians.

2. 820 films were taken in the Central Office—406 on provincial Civil Servants; 149 on persons referred by outside physicians; 72 on persons referred by staff physicians; 90 on teachers, or teachers-in-training; 46 on immigrants arriving from the British Isles; 24 on persons receiving post-sanatorium care; 20 on students of the University of Toronto and 13 on persons employed in industry.

B

REPORT OF MASS X-RAY SURVEYS

During 1947 by the addition of two mobile miniature X-ray units, the extent of activities of the Division of Tuberculosis Prevention was considerably increased. In the past, mass X-ray was available to the population of smaller centres only if it were possible to include them with a larger community. Now, by the addition of these two self-sufficient units any community regardless of size or location can be reached for mass X-ray.

In the past year, a grand total of 323,571 X-rays were taken—303,214 in 159 communities, the remaining 20,357 in twelve non-community surveys. These twelve surveys were as follows:

- (1) Students of the Universities of McMaster, Western Ontario, Queen's, Ontario Agricultural College, and Summer School for Teachers.
- (2) Staff and prisoners of Collins Bay and Kingston Penitentiaries.
- (3) Treaty Indians. In co-operation with the Indian Medical Services, Department of Health and Welfare, surveys were held at two reservations.
- (4) Provincial Civil Service—Toronto and district.
- (5) Independent Order of Odd Fellows.
- (6) Immigrants—On arrival at Malton, all immigrants were X-rayed. The figures for these immigrants are not included in any of the following tables. The number of X-rays taken on immigrants, however, does show in the grand total of 323,571.

A total of 947 cases of tuberculosis (active, inactive or pleurisy with effusion) were discovered to make 0.30 per cent of all persons X-rayed. Of these 194 (or 20.5 per cent.) were active, 168 of the active cases were not previously known.

Again credit is extended to the Ontario Tuberculosis Association for its efforts in organizing the various local Christmas Seal committees. These committees assumed the task of collecting funds by the sale of Christmas Seals, the proceeds of which make a survey possible. They were also largely responsible for many of the details necessary in arranging a mass survey. The committees plus the volunteer clerks and canvassers gave unstintingly of their time with no remuneration, to make these surveys a success and thus rendering inestimable aid in this very worthwhile project of tuberculosis control.

COMPARATIVE FIGURES—1946-47

	1946	1947	Increase 1947
Number of Communities X-rayed.	77	159	82
Number of non-Communities X-rayed.	11	12*	1
Number of Community X-rays.	289,540	303,214	13,674
Grand Total X-rayed.	301,324	323,571*	22,247

*Includes X-rays taken on immigrants on arrival.

NOTE: All non-graduate nurses, previously known to have had tuberculosis, were employed in sanatoria.

PART III

HISTORY OF SANATORIUM TREATMENT WITHIN FIVE YEARS OF DEATH IN PERSONS DYING OF TUBERCULOSIS IN ONTARIO 1946

The record was obtained of persons dying of tuberculosis in Ontario in 1946 who had received sanatorium treatment within five years of death.

Table XXX gives the summary of the findings for deaths of all forms of tuberculosis, as well as pulmonary only; a separate tabulation being made for Indians, whites, and whites and Indians combined.

It will be noted that 70.7% of all persons dying of tuberculosis (all forms) had been in sanatorium, while 80.9% of those dying of pulmonary tuberculosis had received sanatorium treatment. (If the white population only is counted the percentages are 73% and 81% respectively.)

Tables XXXI, XXXII and XXXIII give the details re the deaths from pulmonary tuberculosis in counties, districts, cities and towns.

Table XXXIV shows the analysis of those persons (excluding Treaty Indians) who died of pulmonary tuberculosis in 1946 who had not been in sanatorium within five years of death. It will be noted that 67% of these were over 50 years of age, and 44% were over 60 years of age.

TABLE XXXIV

PERSONS (excluding Indians) DYING OF PULMONARY TUBERCULOSIS IN
ONTARIO IN 1946 NOT TREATED IN SANATORIUM WITHIN
FIVE YEARS OF DEATH

1. Analysis According to Age and Sex

Age Groups	Male	Female	Total	Percentage of Total
0 to 4.....	2	2	4	2.7
5 to 9.....
10 to 14.....
15 to 19.....	1	2	3	2.1
20 to 24.....	2	5	7	4.8
25 to 29.....	2	6	8	5.5
30 to 39.....	4	9	13	8.9
40 to 49.....	6	6	12	8.2
50 to 59.....	26	6	32	22.0
60 to 69.....	28	5	33	22.8
70 and over.....	20	12	32	22.0
Not stated.....	1	0	1	1.0
Totals.....	92	53	145	100.0

It is noted that 67% of this number were over 50 years of age and 44% over 60 years of age.

2. Analysis According to Classification of Pulmonary Tuberculosis as Primary or Secondary Cause of Death

Age Groups	Pulmonary Tuberculosis Given as Primary Cause	Pulmonary Tuberculosis Given as Secondary Cause
0 to 4.....	4	0
5 to 9.....	0	0
10 to 14.....	0	0
15 to 19.....	2	1
20 to 24.....	5	2
25 to 29.....	7	1
30 to 39.....	12	1
40 to 49.....	11	1
50 to 59.....	21	11
60 to 69.....	25	8
70 and over.....	21	11
Not stated.....	1	0
Totals.....	109	36

In 75% pulmonary tuberculosis was given as the primary cause of death, while in 25% it was given as the secondary cause.

3. Analysis According to Reason for not Entering Sanatorium

(a) Refused Sanatorium treatment.....	14
(b) Diagnosed shortly before death or at autopsy.....	98
(c) Sanatorium treatment not considered necessary by physician or clinic.....	28
(d) No answer to questionnaire.....	5

*145

*Ten of these had been treated in sanatorium previous to the five year period preceding death.

81% of persons dying of pulmonary tuberculosis who did not have the benefit of sanatorium treatment were discovered shortly before death or at autopsy.

PART IV

REPORT UPON POST-SANATORIUM CARE OF EX-PATIENTS
OF SANATORIA

The Department accepts responsibility for the care of those persons who, prior to admission to sanatoria, resided in unorganized territory or who had failed to establish residence in any municipality in Ontario within the meaning of The Sanatoria for Consumptives Act. Post-sanatorium care provides for treatment outside of sanatorium, including food, lodging, necessaries of life and transportation.

Seventy-four such persons were discharged from sanatoria in 1947. Thirty-two of this group were in a position to assume immediate responsibility for their own welfare, or were sufficiently recovered to return to employment at once, and seven required only some initial assistance (clothing, transportation). The remaining thirty-five required assistance with board and lodging, and sixteen of these also required further help (clothing, transportation).

As of December 31st, 1947, a total of thirty-six patients were receiving board and lodging, seventeen of these having been carried over from 1946.

Although not classed directly as part of its post-sanatorium care programme, the Government pays physicians approved to give pneumothorax refills for work done on ex-patients who cannot pay for their treatment. Approximately 1600 persons who received in excess of 33,000 refills were cared for in this way.

PART V

TABLE XXXV

RECORD OF NON-RESIDENTS TREATED IN ONTARIO SANATORIA, 1947

PART VIII

CLASSIFICATION OF DISEASE IN PERSONS LEAVING
SANATORIA AGAINST ADVICE

	1946	1947
Tuberculosis Suspect.....	2	3
Primary Infection.....	2	1
Pleurisy with Effusion.....	10	9
Minimal		
(a) Bacillary.....	6	4
(b) Non-Bacillary.....	32	39
Moderately Advanced		
(a) Bacillary.....	41	21
(b) Non-Bacillary.....	64	53
Far Advanced		
(a) Bacillary.....	72	42
(b) Non-Bacillary.....	30	15
Non-Pulmonary.....	6	7
	265	194

119 or 40.4% of those leaving in 1946 were infectious. 67 or 34.5% of those leaving in 1947 were infectious.

FOLLOW-UP OF INFECTIOUS CASES OF PULMONARY TUBERCULOSIS LEAVING SANATORIUM AGAINST ADVICE

	1946	1947
(a) Re-admitted to Sanatorium voluntarily	56	24
(b) Re-admitted to Sanatorium on commitment	4	1
(c) Maximum benefit cases—allowed to remain at home	32	28
(d) Died at home	3	1
(e) Lost track of	11	4
(f) Moved out of the Province	12	5
(g) Refused Sanatorium—no action taken	1	1
(h) No answer to inquiries	0	3
	119	67

DIVISION OF VENEREAL DISEASE CONTROL

W. G. BROWN, M.D., D.P.H., *Acting Director*

In the Province of Ontario, the public health procedures for the prevention and control of venereal diseases are applied through the local public health services provided by the local board of health. The Division of Venereal Disease Control distributes financial assistance in the form of subsidies and grants and offers advisory and directional assistance in matters of diagnosis, treatment and public health control procedures. This report is, therefore, not only a summary of Division activity but expresses the participation and accomplishments of the many local public health authorities, to whom much credit and commendation is due.

The trend of incidence of venereal diseases, as reported to the Division, is definitely downward, which fact should be of no little encouragement to those who have devoted so much time and skill to this difficult and elusive problem. The year 1947 provided a total of 8,234 reports of previously unregistered infections, giving a rate of 2 per thousand population, whereas the year 1946 had given a total of 12,188 reports with a rate of 3 per thousand. This reduction of 3,954 reported cases represents a 32.4% reduction of reported incidence. The rate of 2 per thousand population for 1947 marks a return of the reported incidence rate to the lowest level recorded during the past ten-year period.

TABLE 1
THE REPORTED INCIDENCE OF VENEREAL DISEASE IN ONTARIO
Showing the Annual Number of Venereal Disease Infections Reported
1938 to 1947

Year	SYPHILIS (All Forms)	GONOR- RHOEA	TOTAL VENEREAL DISEASE	
			No.	Rate per 1,000 Popu- lation
1938	3,010	4,188	7,198	1.96
1939	3,285	4,125	7,410	2.00
1940	4,953	4,218	9,171	2.45
1941	7,484	5,293	12,777	3.37
1942	5,952	6,220	12,172	3.13
1943	6,849	6,390	13,239	3.38

1945	4,919	8,225	13,144	3.28
1946	4,834	7,354	12,188	3.04
1947	3,302	4,932	8,234	2.00

A. REPORTED INCIDENCE OF SYPHILIS

From the standpoint of public health prevention and control of syphilis those infections which are actually or potentially infectious are of the greatest concern. These infections comprise primary and secondary syphilis and latent syphilis of less than two years duration, as well as syphilis of any duration in a

female of child bearing age. It is only by prompt diagnosis and control of these infections by treatment, that control of syphilis can be accomplished. The thorough investigation of the source and spread of every such infection is of course of equal importance if further dissemination of the disease is to be prevented. The following tables present statistical data, provided through the co-operation of physicians and clinics, with added comments to indicate their probable significance.

TABLE 2
THE REPORTED INCIDENCE OF SYPHILIS IN ONTARIO
Showing the Annual Number of Syphilis Infections Reported
1938 to 1947

Year	SYPHILIS (All Forms)	
	No.	Rate per 1,000 Population
1938.....	3,010	0.82
1939.....	3,285	0.89
1940.....	4,953	1.32
1941.....	7,484	1.97
1942.....	5,952	1.53
1943.....	6,849	1.75
1944.....	5,365	1.35
1945.....	4,919	1.23
1946.....	4,834	1.20
1947.....	3,302	0.80

There has been a continued decrease in the annual number of reported syphilis infections since the year 1943, as shown in Table 2. This table also shows that the annual reported syphilis incidence rate, per 1,000 population, for the year 1947 was the lowest rate recorded during the ten-year period just completed.

The numerical distribution of reported syphilis by age groups, sex and classification of infection is shown in Table 3.

TABLE 3

THE REPORTED INCIDENCE OF SYPHILIS IN ONTARIO

Showing the Distribution of Reported Syphilis by Age Group, Sex and Classification of Disease
January to December, 1947

Age Group	Prenatal Syphilis		ACQUIRED SYPHILIS								Type not Stated		Total

		123		875		572		1,067		420		245		3,302

The distribution of reported infections by age group has been extended up to age 60. It may now be noted that the occurrence of primary syphilis extends in significant numbers through the older age groups among males. The same observation might be made regarding secondary syphilis, although differences in incidence for the two sexes are not so marked. The more uniform distribution of latent syphilis throughout the age groups, in both sexes, from 20 to 60 years of age, is as might be expected although it is noted that a peak occurs among females in the 20-24 year age group, which may be related to the more frequent inclusion of the serologic test in the examination of expectant mothers. Late syphilis, as might be expected, is reported in the later age groups when symptoms of debilitating disease draw attention to existence of previously latent asymptomatic infection.

The age distribution of the population should of course be taken into consideration when the factor of age is related to incidence. This has been done and the data are presented in Table 4. This table also gives the data for the year 1946 for comparative purposes.

TABLE 4
 THE REPORTED INCIDENCE OF SYPHILIS IN ONTARIO
 Showing the Annual Rate per Thousand Population of Reported Syphilis
 By Age Group and Sex
 1946 and 1947

Age Group	MALE			FEMALE		
	1946	1947	Per cent Decrease in 1947	1946	1947	Per cent Decrease in 1947
0-14.....	0.09	0.09	0.10	0.10
15-19.....	0.61	0.55	- 9.8	1.26	1.04	-17.5
20-24.....	3.16	1.88	-40.5	2.26	1.65	-27.0
25-29.....	3.38	1.51	-55.3	1.81	1.33	-26.5
30-34.....		1.18			0.96	
35-39.....		1.11			0.92	
40-49.....	1.51	1.06	-35.8	0.62	0.54	-17.7
50-59.....		1.02			0.30	
60 plus.....		0.61			0.16	
N.S.....	0.14	0.07	-50.0	0.10	0.07	-30.0
All Ages.....	1.52	0.91	-40.1	0.89	0.69	-22.5

Although the age group of highest reported incidence among males has apparently shifted from the 25-29 to the 20-24 year age group, the decrease in incidence is quite uniform throughout all the significant age groups for either sex. The smaller percentage decrease shown for females in this table might be considered in the light of further data provided in Table 5.

TABLE 5
 THE REPORTED INCIDENCE OF SYPHILIS IN ONTARIO
 Showing the Annual Rate per Thousand Population of Reported Syphilis
 by Age Group, Classification and Sex
 January to December, 1947

N.S.....	0.02	0.03	0.05	0.04
All Ages.....	0.03	0.03	0.43	0.27	0.45	0.39

It will be noted that when reported infections are classified by sex and stage of infection, the higher rate of incidence among males is more apparent. This is more evident in the primary and secondary classifications, but is still evident in infections in the later stages of development.

From the standpoint of syphilis control, the early communicable infections are of greatest significance. New syphilis arises from existing infectious syphilis. The effectiveness of control measures will depend ultimately and almost entirely upon the success which is attained in promptly locating infectious early syphilis and rendering that infection non-communicable by adequate treatment. This infectious disease continues to be prevalent in our population either because early cases are not adequately treated when located or because there are still a significant number of early infections which are never located, at least in the infectious stage. The former reason should be decreasing in importance in view of greater public and physician co-operation and the availability of more efficient treatment methods. The latter reason is still by far the major cause of failure in attainment of effective control. For this reason the Division purposes to concentrate its efforts during the coming year in an attempt to reduce the prevalence of communicable infection which must exist.

During the year 1947 a reduction in reported primary and secondary infection was noted. This reduction of 894 reports, or 38.2%, though encouraging to a degree, is still far from the result which should be possible if all the means at the disposal of local health departments are applied effectively. The Division has planned an expansion of assistance and services toward this end and it is hoped that more significant results can be obtained. Figure 1 indicates the trend, as shown by reporting, of the incidence of early and late infections.

FIGURE 1
THE REPORTED INCIDENCE OF VENEREAL DISEASE IN ONTARIO
Showing the Number of Venereal Disease Reported by Months
January to December, 1947

B. REPORTED INCIDENCE OF GONORRHOEA

The reported incidence of gonorrhoea shows, as does that of syphilis, a distinct decrease with a reduction of 2,422 infections for the year 1947 as compared with 1946, being a reduction of 32.9%. The assumption that the reported incidence is expressive of actual incidence, would be an error and the Division is aware of this fact. The increasing reliance upon penicillin as therapeutic means to treat any inflammatory genito-urinary condition is tending to eliminate repeated laboratory examinations for the confirmation of a diagnosis of gonorrhoea. It is not considered to be poor public health practice to treat clinical infections suggestive of gonorrhoea on a presumed diagnosis, although it is still the policy of the Division to urge physicians and clinics to follow the most careful methods of examination with a view to establishing an accurate rather than a presumptive diagnosis. Gonorrhoea still presents a wide-spread problem of a dangerous and costly communicable disease and every advantage should be taken of modern progress in therapy. But epidemiologic investigations still in a significant number of instances, may be expected to be the only effective means available to locate and bring undiscovered infections under medical care.

TABLE 8
THE REPORTED INCIDENCE OF GONORRHOEA IN ONTARIO
Showing the Annual Number of Gonorrhoea Infections Reported
1938 to 1947

Year	GONORRHOEA	
	No.	Rate per 1,000 Population
1938.....	4,188	1.14
1939.....	4,125	1.11
1940.....	4,218	1.13
1941.....	5,293	1.40
1942.....	6,220	1.60
1943.....	6,390	1.63
1944.....	7,908	2.00
1945.....	8,225	2.05
1946.....	7,354	1.84
1947.....	4,932	1.20

Few comments need be made respecting the data presented in the following tables. Many of the comments made in respect of similar data related to syphilis, apply also to gonorrhoea. The extended age group distribution shows a continuation of involvement of the male, into the older age groups. The age group of greatest reported incidence was formerly the 20-24 year age group and this distribution still prevails. It may be noted that the distribution of reporting agency for gonorrhoea shows that the highest percentage of reports came from clinics, particularly for infections in the female, whereas the highest number of reports respecting syphilis came from physicians.

C. EPIDEMIOLOGY

The epidemiologic investigations which are initiated by the location of previously unknown communicable venereal disease infections, constitute a major portion of the venereal disease control procedures of any health department. The effectiveness of these procedures depends upon skillful case interviewing, thorough contact investigation and adequate medical examination of contacts located. Skillful interviewing will elicit from the case, adequate, relevant and more or less complete information which offers good prospects for successful location of the contact named. When contacts are located their medical examination must be adequate if the presence or absence of infection, which may be either incubating or active or latent, is to be proven or disproven. The following tables present data on the results obtained during the past year in the over-all programme of epidemiology. These data reflect the recent improvements in recording and assessing of contact information but indicate as in previous years that there is still room for considerable improvement in efficiency.

TABLE 12
EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO
Showing Cases Reported and Contact Informations Received
1943 to 1946

Year	Venereal Disease Cases Reported	Contact Informations Received	Ratio of Cases to Contacts
1943.....	13,239	2,047	1 : 0.15
1944.....	13,273	6,820	1 : 0.51
1945.....	13,144	10,360	1 : 0.79
1946.....	12,188	9,006	1 : 0.74
1947.....	8,234	7,160	1 : 0.87

This table presents numerically the totals of cases and contact informations reported to the Division during the five year period 1943 to 1947, together with the ratio of cases to contact informations. It will be noted that, although the

total number of contact informations for the year 1947 was not as great as last year, the ratio has followed the previous trend of improvement. There are still large numbers of contact informations which are inadequate or are irrelevant to the case concerned. These are included in order to avoid a false impression of the efficiency of epidemiologic procedures. Unless they are included any evaluation of epidemiology would assume case interviewing to be of such efficiency as to always provide adequate contact information for investigation.

TABLE 13

EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO

Showing Percentage Distribution of Cases Reported and Contact Informations Received by Age Group, Sex and Disease

January to December, 1947

Age Group	EARLY SYPHILIS				GONORRHOEA			
	Male		Female		Male		Female	
	Cases	Contacts	Cases	Contacts	Cases	Contacts	Cases	Contacts
Under 15.....	3.3	0.7	4.6	0.3	0.1	2.8	0.4

Over 30.....	40.3	28.5	25.2	21.0	23.4	21.2	15.5	13.3
Not stated...	5.5	23.5	10.0	22.0	6.4	17.9	5.8	12.8
All Ages.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Table 13 shows the age group distribution of persons reported as cases compared with the age group distribution of persons reported as contacts.

TABLE 14

EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO

Showing the Relation Between Cases Reported and Contact Informations Received by Disease and Sex

January to December, 1947

Disease	REPORTED CASES		CONTACT INFORMATIONS		RATIO OF CASES TO CONTACTS	
	Male	Female	Male	Female	A : D	B : C
Syphilis.....	A 1,889	B 1,413	C 1,316	D 1,353	1 : 0.72	1 : 0.93
Gonorrhoea.....	3,723	1,209	1,314	3,177	1 : 0.85	1 : 1.09
Total Venereal Disease.	5,612	2,622	2,630	4,530	1 : 0.81	1 : 1.00

Table 14 presents, numerically by sex, the number of case reports received in relation to the number of contact informations. The cases in column A when interviewed named the contacts in column D and the case in column B

named the contacts in column C. It is noted that female patients provide more contact informations than male patients. A survey of the information collected also shows that the information obtained from female cases is more adequate and therefore is more useful for investigation purposes.

TABLE 15

EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO

Showing the Ratio between Cases Reported and Contact Informations Received by Reporting Agency

January to December, 1947

Reporting Agency	Reported Cases of Venereal Disease	Number of Contact Informations	Ratio of Cases to Contacts
Clinics.....	3,803	4,455	1 : 1.17
Physicians.....	3,811	1,820	1 : 0.48
Armed Forces.....	195	162	1 : 0.83
Other*.....	425	732	*
Total.....	8,234	7,160	1 : 0.87

*Includes contact informations respecting cases of venereal disease residing outside of Ontario.

Table 15 presents the data of reported cases and reported contact informations with ratio of cases to contacts, classified by reporting agency. This table indicates the distribution of the field of case interviewing opportunity. The degree of interviewing activity is shown for each agency group. Due allowance must be made for the fact that the stage of infection in the case frequently determines the advisability or need for interviewing, with the interviewing of early syphilis and gonorrhoea cases being of greatest importance.

TABLE 16

EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO

Showing the Number of Contacts Located

1944 to 1947

Year	CONTACTS INVESTIGATED	CONTACTS LOCATED	
		No.	Percent
1944.....	6,820	2,518	36.9
1945.....	10,360	3,840	37.1
1946.....	9,006	3,761	41.8
1947.....	7,160	3,544	49.5

In Table 16 the success of contact locating is expressed both numerically and as a percentage of the total investigation load which was undertaken. The percentage of persons named as contacts who are located has improved over previous years and is now close to 50%.

TABLE 17
 EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO
 Showing the Number of Contacts Found Infected
 1944 to 1947

Year	CONTACTS LOCATED	CONTACTS FOUND INFECTED	
		Number	Percent
1944.....	2,518	1,380	55.1
1945.....	3,840	2,122	55.3
1946.....	3,761	1,856	49.4
1947.....	3,544	1,671	48.9*

*This statistic excludes those located contacts who were not yet diagnosed at the time this table was prepared.

Of the persons located, approximately 50% are found on examination to be infected. It is doubtful if this latter finding will show much change in the future. However, the percentage of persons named, who are located, can be improved if case interviewing and contact information improves in quality. It is toward this end that appraisal of methods and development of rules of relevancy will be continued in order that irrelevant information may be recognized and valuable staff time saved.

TABLE 18
 EPIDEMIOLOGIC INVESTIGATION OF CONTACT INFORMATION IN ONTARIO
 Showing Contacts Located, Contacts not Located, and Contacts Still under
 Investigation, by Sex
 January to December, 1947

	MALE		FEMALE		TOTAL	
	No.	Per Cent	No.	Per Cent	No.	Per Cent
Contacts Located.....	1,532	58.3	2,012	44.4	3,544	49.5
Syphilis.....	310	11.8	307	6.8	617	8.6
Gonorrhoea.....	413	15.7	641	14.2	1,054	14.7
Negative.....	731	27.8	967	21.3	1,698	23.7
In the Course of Examination.....	78	3.0	97	2.1	175	2.5
Contacts Not Located.....	1,036	39.4	1,927	42.5	2,963	41.4
Inadequate Information.....	446	17.0	795	17.5	1,241	17.4
Outside the Province.....	85	3.2	189	4.2	274	3.8
Other Reason.....	505	19.2	943	20.8	1,448	20.2
Contacts under Investigation at the End of the Year.....	62	2.3	591	13.1	653	9.1
Total Contacts Reported.....	2,630	100.0	4,530	100.0	7,160	100.0

Table 18 gives the results of investigations in more detail and shows the value of the more adequate contact identification provided by females respecting male contact who, as shown in the table, were located with considerable more frequency than were the female contacts described by males.

It will be noted that in 20.2% of all contact investigations the contact was classified as not located since the local health authority did not provide an adequate report. In these instances the Division was not able to assess the finding respecting the investigations concerned and therefore classified them in the not located category.

In view of the fact that the true appraisal of the results of epidemiologic procedures is the percentage of all reported infections which were brought under medical care by these procedures, the Division proposes to establish criteria for appraisal of procedures carried out respecting primary and secondary syphilis and will be able to compare future data with the findings for the year 1947.

D. STATISTICAL AND CLINICAL STUDIES

In the study of syphilis and gonorrhoea, as is the case with any infectious disease, certain basic facts must be known. Among these essential facts are the extent and characteristics of distribution of these infections. This knowledge is a prerequisite to effective prevention and control and for this reason the Division for the past two years has conducted statistical studies on available data. Two such studies are outlined briefly below with comments as to the findings.

A. *A Study Based on Case Reporting*

The punch-card analysis of 5,032 notifications, received by this Division during the period April 1st to September 30th, 1947, provided data about the venereal disease cases from which annual reported incidence rates per 1,000 population were derived. The compilation of these rates in tabular and other forms on the basis of classification of disease, sex, age-group distribution, marital status and means of identification of the case, together with data respecting the source of notification and the basis for reporting, revealed the following pertinent information:

1. Of 5,032 notifications received, 77.4 per cent pertained to previously unreported infections and 22.6 per cent were forwarded for other reasons.
2. A full name was used as identification in 94.6 per cent of all notifications received.
3. Physicians and clinics shared equally in providing 92.3 per cent of notifications of previously unreported infections.
4. The reported incidence rate, irrespective of sex or diagnosis, appears to be substantially higher among divorced or separated individuals.
5. In a special study it was found that 85 per cent of the reported diagnoses of primary and secondary syphilis, among married persons, were made after these individuals had been married at least four years. Among persons in the divorced or separated group, all such diagnoses were made within four years of the stated date of separation from marriage.

6. In so far as the acquisition of gonorrhoea and early syphilis is concerned, the significant age group for males is 20-29 years and for females 15-24 years.
7. Current reported rates of venereal infections are as low as any rates recorded over the past ten years.
8. The ratio of reported syphilis to reported gonorrhoea is taken to be expressive only of the current seeding of each venereal infection in the population and it is believed that these infections are not distributed in any fixed ratio.

B. *A Study Based on Reported Contact Information and the Related Investigations*

The punch-card analysis of 3,465 contact informations, received by the Division during the period July 1st to December 31st, 1947, and the related investigations permitted an appraisal of the following factors related to interviewing and investigation:

- i. *Volume of contact reporting*—ratio of previously unregistered cases to contact information received.
- ii. *Success in contact locating*—percentage of contacts located in relation to total contact informations received.
- iii. *Success in locating infections*—percentage of located contacts found infected in relation to total contact informations received.
- iv. *Success in locating unknown infections*—percentage of located contacts found infected and not under medical care when located in relation to total reported cases.

This analysis, made in respect of contacts of early syphilis, gave certain findings which can serve as a basis for current assessment of the effectiveness of epidemiologic procedures on a provincial or local basis. The findings respecting the appraisal referred to above are as follows:

- i. *Volume of contact reporting*—The ratio of reported, early syphilis to associated contact informations was 1:0.91 for male cases and 1:1.26 for female cases. The more favourable ratio respecting female cases was found to obtain for other classifications of syphilis and for gonorrhoea.
- ii. *Success in contact locating*—Approximately 70% of male contacts of female cases of early syphilis were located as compared with only 50% of female contacts of male cases of early syphilis. The more favourable percentage of male contacts, named by female cases, located was found to obtain for other classifications of syphilis and for gonorrhoea.
- iii. *Success in locating infections*—Almost 45% of all contact information given by female cases of early syphilis, led to the location of an infected male, whereas 35% of all contact information given by male cases of early syphilis led to the location of an infected female.

iv. *Success in locating unknown infections*—When contacts are located and found infected a certain number are found to be already under medical care for their infection. The measure of the effectiveness of combined epidemiologic procedures is the percentage of contacts located and found infected but not under medical care when located, in relation to the reported volume of early syphilis. For either sex, the analysis shows that about 40% of located, infected contacts were already under medical care when located. The other 60% constitute the located unknown infections which are found to be 13% of reported early syphilis. This latter percentage is the significant measure of effectiveness of all epidemiologic procedures combined and may be taken as a measure to appraise the efficiency of this phase of venereal disease control.

Some of the other fact-finding studies conducted by this Division during 1947 were as follows:

1. An appraisal of the reported results of pre-marital legislation enacted in the United States and Canada in so far as location of previously unknown syphilis is concerned.
2. A statistical study of the incidence of primary, secondary and early syphilis of less than two year's duration, by county and municipality, for the year 1947.
3. A statistical study of reported incidence of syphilis and gonorrhoea in municipalities of more than 10,000 population, by quarters for the year 1947.
4. A punch-card analysis of data respecting 1,000 consecutive cases of previously unreported venereal disease, covering the period April 1st to May 15th, 1947.
5. A study of physician case load of syphilis registered with this Division from 1940 to 1945 to enquire into the present status of cases and complete the Division's case-holding files.
6. A critical analysis of case interviewing and contact investigation in relation to clinic services, during the first quarter of 1947.
7. A statistical study of separation or loss from treatment of clinic patients in the various Ontario clinics during the first quarter of 1947 and for the year 1947.
8. In order to permit the compilation of rates by conjugal condition an estimation of the population of Ontario was made, by sex and conjugal condition as at December, 1946, on the basis of previous estimates supplied by the Dominion Bureau of Statistics.
9. An appraisal of knowledge among teen-agers respecting venereal diseases and the effect upon this knowledge of planned educational programmes.

The Division has supported, through the supply of therapeutic preparations and other aid, several clinical studies which are intended to evaluate newer forms of treatment and the relative value of various schedules of administration. These studies have been carried out through the co-operation of various clinics.

E. ADMINISTRATION

Staff:

During the year 1947 several changes have occurred among medical and nursing personnel in the Division. The resignation of Dr. A. A. Baker was accepted with regret and our best wishes are extended to him as he pursues his post-graduate studies. Two appointments were made toward the end of the year. Dr. C. E. Hookings and Dr. G. E. Large joined the staff and will devote the major portion of their time to the case control and epidemiologic phases of the Division programme.

The progress attained in participation of public health nurses in venereal disease control has permitted the gradual reduction of the nursing personnel of the Division. The previous needs for field work service by epidemiologists provided by the Division decreased to the extent that the needs in this field have become more advisory and consultative. Miss M. P. Stiver, P.H.N., supervisor of our nursing staff returned from post-graduate studies, having completed courses which have added the degree of Bachelor of Science to her qualifications. The Division now proposes to adjust its service in the nursing field to meet the changing needs but will maintain and expand the educational activities among post-graduate and under-graduate groups and will provide advice and demonstration in epidemiologic techniques as required by local health departments.

The statistical service provided within the Division by our public health statistician continued to be of the greatest importance to the programme. Current statistical analyses and records have been maintained and extended and many statistical studies have been undertaken. Some of these studies will be noted in an appropriate section of this report and although only brief reference can be made to their nature and scope, they have been of invaluable assistance in the clearing of many misconceptions and in the designing of more effective control procedures.

Clinics:

There has been a general reduction in clinic attendances during the year, which reduction is accepted as being a reflection of reduced venereal disease incidence. This reduction occurred generally throughout the Province, with only one clinic showing a slight increase in total attendance. The total reduction amounts to approximately 20% and marks a reversal of the trend of the last few years toward increasing clinic activity.

*Clinic closed on June 30, 1947.

**Clinic closed on October 31, 1945.

Drug Distribution:

There has been a reduction of therapeutic preparations distributed and this reduced demand is again indicative of lowered requirement due to reduced incidence. There was an increased penicillin distribution as a result of the recognition of the increasing advantages of this form of therapy.

F. EDUCATION

Public and professional education has been continued throughout the year and a summary of services in this phase of the Division programme is given in the following tables. The participation of secondary schools in the programme outlined by the Department of Education has expanded and a considerable quantity of visual aids have been utilized. A series of removable and interchangeable charts can now be supplied as a guide for classroom instruction and as a speaker's aid for public education.

A manual on venereal diseases has been produced by the Division as an aid for student nurse education. This is the first of a series of three manuals, the other two being intended for physicians and for public health personnel. The latter two manuals are now in the course of preparation and will be available for distribution early in the year 1948.

There is a need for new films for public education since several of the original films are now outdated by changes in methods of treatment and by the transition of the programme from a war-time to peace-time basis. Film strips are being prepared as visual aid for teaching projects and for public education.

*In conjunction with twenty-three of the above lectures and addresses the medical film "Syphilis" was shown.

The Bulletin of Venereal Disease Control, prepared for physicians, was published four times during the year, with the following leading articles being presented:

- (1) Nomenclature of Syphilis.
- (2) The Significance of a Positive Serologic Test in a Routine Examination.
- (3) Penicillin in Early Syphilis.
- (4) Communicability of Syphilis.

These Bulletins, in general, have had a good reception from the profession and they are intended to bring pertinent and practical information to the physician which may be of assistance to him in dealing with the many problems presented by patients who come under his diagnosis, treatment, or management. With the preparation of the manual for physicians, much of the information circulated by the Bulletin will be made available in a more permanent form for reference.

MEDICAL STATISTICS BRANCH

A. H. SELLERS, B.A., M.D., D.P.H., *Director*

During 1947, attention continued to be focussed on the establishment of the activities of the Branch on a basic minimum peacetime footing. While work on cancer and mental hospital statistics continued to consume a substantial part of the time of staff, an increasing amount of attention was given to special studies in hospitalization, nursing personnel, industrial morbidity, etc. The statistical library of the Branch was initiated, a total of 88 annual reports being distinctively bound, including: Vital Statistics, Canada, 15; Vital Statistics, Ontario, 24; Public Hospitals, 25; and Ontario (Mental) Hospitals, 24.

The most important phases of the work undertaken by the Branch during the year are summarized briefly, *seriatim*, in the sections which follow.

I. CANCER RECORDS REPORTS AND STATISTICS

The Branch continued to be responsible for the collection, tabulation, and analysis of cancer data recorded by the Ontario Cancer Centres and to supervise the printing and distribution of the cancer case history and examination forms and follow-up cards which are used in all seven Centres.

Annual Reports of Cancer Centres

As in previous years, a statistical summary, comprising twelve tables, was prepared for each Centre, covering all new patients admitted to each Centre during the year. Each Director was provided with a copy of the summary for his Centre, together with a copy of the consolidated report covering the work of all Centres combined.

In future it is planned that this Branch will prepare and supply to the Ontario Cancer Treatment and Research Foundation, for publication in the annual report, a Statistical Report on the work of the Ontario Cancer Centres. This Report will be based on data contained in the Annual Statistical Reports on Cancer published in the Annual Report of the Department.

Recording and Reporting Procedures

Visits were made to the seven Cancer Centres during the year for the purpose of discussing and resolving any record problems arising during the previous year. These visits likewise help to ensure the maximum degree of uniformity of the data recorded on the history forms and statistical cards, an important consideration in subsequent analyses of treatment experience and clinical research.

During 1947, further attention was given to proposed changes in the present cancer recording and reporting system. Consideration was given to the possibility of simplifying the clinical records and also the follow-up cards, keeping the basic needs of clinical research and the requirements for analysis of treatment experience clearly in mind. For statistical and for clinical research, com-

pleteness and specificity are essential. It was surprising to find in our studies of the latest printings of cancer record forms of certain important Cancer Centres that much of the detail formerly considered essential now has been abandoned and the details recorded limited to the *minimum* requirements.

In October, 1947, a conference was held with the Directors of the Ontario Cancer Centres for the purpose of reviewing the present position in respect of cancer records, and receiving and discussing any suggested changes either in the forms themselves or in the recording and reporting procedure or terminology. No final decisions were reached but the conference succeeded in bringing forward many useful suggestions and ended with a balance of opinion opposed to over-simplification of the present clinical record system. Indeed, it appeared that changes should, in the general view, be of a relatively modest character.

It was agreed that the problem of cancer records should be referred, for further consideration and recommendations, to the Committee on Cancer Centres of the Ontario Cancer Treatment and Research Foundation, the Chairman of the Committee to appoint a sub-committee for the purpose. Meanwhile, the system is to remain as at present through 1948.

Cancer Morbidity Studies

Work on both the Middlesex Cancer Survey and the Public Hospital Case Study was continued during the year. In the former study it was found necessary to repeat all tabulations made in 1939 and 1940 due to procurement of added information in many of the cases. The final data on the Middlesex Survey will be incorporated in a formal report for publication in 1948.

The Annual Statistical Report on Cancer

During 1947, the regular Eleventh Annual Statistical Report on Cancer was prepared. This report presented data on new cancer cases reaching the Clinics during 1946 and included supplementary tables illustrating trends in case volume and the current delay in seeking treatment. This Report was published in the Twenty-Second Annual Report of the Department for 1946. In accordance with usual practice, two hundred copies of this Report were reprinted for distribution to a selected list of authorities engaged in cancer control activities throughout the world.

During the year statistical data were prepared and made available for inclusion in the Annual Report of the Ontario Cancer Treatment and Research Foundation. This policy will be extended in future.

The Twelfth Annual Statistical Report on Cancer for the calendar year 1947, is presented on pages 184 to 222 inclusive, of this Report.

Reporting of Cancer Cases

In November, 1946, a plan was inaugurated for the voluntary reporting of cases of *cancer or suspected cancer* in the districts of Northern Ontario served by Cancer Diagnostic Centres located at Port Arthur and Fort William, Sudbury, and Timmins. This activity is carried on jointly by the Department of Health and the Ontario Cancer Treatment and Research Foundation. Under this plan, case reports are made by physicians to the appropriate Diagnostic Centre on a special notification form designed for the purpose.

Following receipt of the notification of a case, an appropriate cancer case history form is returned to the physician by the Diagnostic Centre. When the completed history is received, the Foundation pays the physician a fee of two dollars. Provision is also made under the plan for the payment of a follow-up fee of one dollar for each annual examination.

The objectives in cancer reporting include the procurement of accurate data on the incidence of cancer, and the facilitating of early and adequate treatment and follow-up. The data secured under this reporting plan, if successful, will serve to throw some light on the incidence of diagnosed cancer (as reported) and on the need for treatment facilities for cancer in Northern Ontario.

An analysis of the 195 case reports received during the period November 18, 1946, to May 23, 1947, was made and supplied to the Ontario Cancer Treatment and Research Foundation. An abstract of the highlights of the analysis was included in the Report of the Foundation for 1946.

During the period November, 1946, to December 31, 1947, a total of 388 cases of cancer or suspected cancer were reported. These cases were from the Districts of Cochrane, Kenora, Nipissing, Rainy River, Sudbury, Thunder Bay, and Timiskaming. Of all the *reported* cases during the period, over fifty per cent were from Thunder Bay, principally Fort William and Port Arthur.

A review of the recorded reporting experience during the first year is included in the Twelfth Annual Statistical Report on Cancer, on pages 216 to 222 of this Report.

The Director was appointed Ontario representative on a Committee under the Chairmanship of Mr. J. T. Marshall set up to consider the problem of cancer reporting and to draft a national form for the reporting of cancer. Work of this Committee will continue into 1948.

Cancer Case Follow-Up

During the year, services of the Branch were again extended to the Directors of the seven Cancer Centres in the follow-up of patients after treatment. Arrangements were made for the checking of cancer deaths and for the conduct of cancer death searches, as requested. For this latter purpose a new cancer death search record card was introduced.

II. ONTARIO MENTAL HOSPITAL STATISTICS

The Medical Statistics Branch continued to discharge its responsibility for the collection, tabulation, and analysis of mental hospital statistics during the year and to further develop its programme toward making the most effective use of all recorded data for administrative and medical purposes.

Monthly Statements and Special Reports

Regular monthly statements of movement of patient population were prepared during the year. These statements set out the changes in case load for each hospital and serve as an administrative guide for the Hospitals Division. Periodic analyses of admissions, discharges and population trends were also carried out to meet special problems as they presented. Data for these purposes were secured either from the regular monthly reports submitted to this Branch or from the official Annual Reports of Ontario Hospitals.

Annual Report of Ontario Hospitals

During 1947, the Branch completed the preparation of the Seventy-ninth Annual Report of Ontario Hospitals for Mentally Ill, Mentally Defective, Epileptic and Habituate Patients, covering the fiscal year ending March 31, 1946. Responsibility for supervising the printing of this Report was also assumed by this Branch. Distribution of copies was made to a mailing list of two hundred and sixty-five individuals or agencies.

Work on the Eightieth Annual Report of Ontario Hospitals, covering the fiscal year ending March 31st, 1947, was almost completed during the year, including the addition of several new features and extension of the Annual Statistical Review.

The Annual Report of Ontario Hospitals is the only one of the three annual reports for which the Department is responsible, which is still compiled on a fiscal year basis. During 1947, the possibility of placing this Report on a calendar year basis having been canvassed, the decision was reached to convert the Report to a calendar year basis beginning with 1948. Such conversion will stabilize the reporting period, facilitate comparisons of Ontario data with those for other provinces and for Canada as a whole, eliminate certain special separate returns to the Dominion Bureau of Statistics which are required to be made on a calendar year basis and, most important of all, make possible the preparation, tabulation, and publication of Ontario Hospital statistics some nine months closer to the effective date of the figures than has ever been possible heretofore.

Record Forms and Reporting Procedures

Further work was done during the year toward revision of the statistical case cards which are completed in duplicate by Ontario Hospitals for each admission, re-admission, discharge, transfer, and death. It is anticipated that revision of the statistical cards will be finalized during 1948.

During 1947 the transfer to ledgers of all statistical data contained in the monthly statistical reports of Ontario Hospitals on Forms 182 for the years 1932 to 1947 inclusive was completed. This arrangement greatly facilitates the satisfaction of requests which are made for information on patient movement in individual hospitals or groups of hospitals for selected periods. It likewise renders unnecessary the retention in active files of all monthly reports except those for the current year.

Several conferences on mental hospital statistics were held with the competent federal authorities. These conferences were concerned particularly with revision of the statistical cards and the annual report tables prepared for the Institutional Statistics Branch of the Dominion Bureau of Statistics.

During the year the set of instructions for the clerical staff of Ontario Hospitals on the preparation of annual statistical report tables, first issued in 1938, was completely revised and expanded to include additional directions regarding the completion of the statistical cards. This material was issued as "An Interim Manual of Instruction on the Use of Statistical Cards and Annual Report Forms." It is intended to further revise this material during 1948 and to add to it more details regarding the statistical cards and sections dealing with the monthly returns on Forms 182 and 194, mental health clinic reports, and reports on community psychiatric activities.

Medical Records Committee Established

During the year the need for a review of and reform in many of the existing recording procedures in Ontario Hospitals became increasingly apparent. At the Superintendents' Conference on April 18, 1947, it was suggested that it would be advantageous to set up a standing Departmental Committee for the purpose of studying the record problems which present in this field and of making recommendations for action.

Effect was given to this proposal in October by the setting up of a standing Departmental Committee on Medical Records and Related Matters, under the authority of the Deputy Minister. This Committee, with the Director as Chairman, held its initial and organizational meeting on October 28. At this meeting a number of pressing problems were discussed and plans were laid for a constructive course of action during 1948.

Mental Health Clinics

Each Mental Health Clinic submits to this Branch a monthly report on current activities and case load, and an Annual Statistical Report. The latter, comprising eight standard statistical tables, provide the essential data for administrative medical purposes.

During 1947, the Branch prepared a consolidated summary concerning the work of the four Mental Health Clinics for the fiscal year ending March 31, 1947, for inclusion in the Eightieth Annual Report of Ontario Hospitals.

Consultant Psychiatrists

During 1947, a simple recording plan was designed for use by consultant psychiatrists employed by the Department. This system provides for the use of a case card (5 x 8) and a statistical and indexing card (3 x 5). On July 1, 1947, an initial supply of these cards was placed in the hands of each consultant psychiatrist for a six-month trial period.

In addition to these records, a system of reports was also developed. These comprised a monthly summary of case load, examinations and treatments, and Annual Statistical Report comprising eight tables. This system was inaugurated on April 1, 1947. A statistical summary for the four centres, prepared by the Branch from the annual report tables submitted by the four consultant psychiatrists, will be included in the Eightieth Annual Report of Ontario Hospitals covering the fiscal year ending March 31, 1947.

Special Therapy Records

The central file of shock therapy case record cards of patients receiving shock therapy was maintained up-to-date during the year, changes in status (discharge, death, etc.) being regularly entered thereon. A proposal was made for changes in these statistical cards at the next reprinting.

III. PUBLIC HOSPITAL STATISTICS

During the year, further work was done toward bringing up-to-date the statistics on trends in hospitalization in order that they might be available for assessing the significance of current trends and in planning for the future. General statistics on case load, facilities and bed occupancy, as well as certain financial and morbidity data are being included in the scope of the work.

Discussions were held during the year with a view to the extension of available official data on hospitalization and the further development of official hospital morbidity statistics. Consideration was also given to the form and content of the annual reports of public hospitals.

The study of all patients with arthritis and rheumatism treated in public general hospitals and homes for incurables during 1944 was continued. The principal object of this study is to determine the extent to which arthritis and rheumatism contribute to the total hospital case load and record the essential facts regarding the distribution of the cases by age, sex, and place of residence. All statistical tables have been completed and a report on the finding of the study will be made during 1948.

IV. SPECIAL PROBLEMS

In addition to the routine activity and special work outlined in the preceding sections, a substantial amount of time was devoted to work in other fields of Departmental interest.

Studies on Nursing Personnel in Ontario

In collaboration with the Division of Nurses' Registration a study was made of some of the essential features of the current student nurse situation in all of the sixty-three Schools of Nursing in Ontario. Data were secured from each school by questionnaire, including figures for two preceding years. The co-operation of the schools of nursing was excellent and the response was complete. In collaboration with the Division of Nurses' Registration, a report covering the finding of the survey was prepared in September, 1947, under the title "Statistical Report on Student Nurse Enrolment, Schools of Nursing in Ontario."

Analysis of Nurse Registration Examination Marks

At the request of the Director, Division of Nurses' Registration, an analysis was made of the marks attained at the examinations for nurse registration conducted by the Department of Health of the Province of Ontario in November, 1946. The available data covered a group of 977 applicants from 65 training schools, all of whom were writing all examinations for the first time. For each School of Nursing the median mark attained and the range of marks was determined for each of the seven examinations written. In addition, the mean, the standard deviation of the distribution, and the standard error of the mean were also determined for each examination for each school with five candidates or more and for all schools combined. Completed tables were supplied to the Division of Nurses' Registration. Companion charts showing the median and range for each examination for each school with ten candidates or more (using a code number) were also drafted. A final joint Report covering the whole study will be released early in 1948.

Industrial Morbidity Statistics

Studies in the field of industrial morbidity statistics which were undertaken last year in collaboration with the Division of Industrial Hygiene, were continued during the year. In August, 1947, a sixteen-page report was published covering "An Analysis of the Lost Time due to Sickness and Injury" in a moderate-sized industrial plant during the three-year period 1942-1944. This study produced basic measures of morbidity which were of great interest, and served as a valuable testing ground for future analyses of industrial morbidity data.

Following completion of this report attention was directed in collaboration with the Division of Industrial Hygiene toward the designing of a plan for the recording, collection, tabulation and analysis of morbidity data which could be adapted for use in any industrial plant. It is expected that the whole plan will be finalized during 1948.

V. MISCELLANEOUS ACTIVITIES

During 1947, copies of the Branch report for 1946, including a review of the chief causes of death during 1945, were supplied to Medical Officers of Health. Copies were also used in the preparation of material for health teaching which is distributed by the Department to teachers and nurses.

Further study was given to the form and content of the Annual Report of the Medical Officer of Health with the object of effecting simplification and ensuring close adaptation to the requirements of the local health agency and the Department alike. A special Departmental Committee on Revision of the Annual Report of the Medical Officer of Health was set up by the Deputy Minister of Health. This Committee held five meetings during the year and made substantial progress in a critical review of the present report forms and the drafting of proposed revisions therein. It is expected that this Committee may complete its work and submit its report and recommendations during 1948.

Further assistance was rendered the Department of Clinical Preventive Medicine, University of Western Ontario, in connection with a study of trends in hospitalization in Western Ontario with specific reference to the increased use of hospital facilities in relation to hospital care insurance.

The Director attended a special conference of public health statisticians at Endicott, New York, July 7-11, 1947. This conference was organized jointly by the International Business Machines Company and the United States Public Health Service and took place in the International Business Machines Administrative School at Endicott, New York.

A review was made of the present position in respect of the preservation of hospital case records for extended indefinite periods. Consideration was given to the part which microfilming might play in resolving the record storage problem now faced by many public hospitals.

Assistance was afforded the Division of Nurses' Registration in the revision of the application and registration form to incorporate much needed occupational data. The new form is being introduced in 1948 and data from the records will become available in 1949.

In view of the growing interest in population structure, two tables were prepared presenting population data by age for the period 1881 to 1971. Two companion charts were also prepared for distribution on request.

Statistical data were prepared on request during the year on a wide variety of subjects including cancer, heart disease, infant mortality, maternal mortality, appendicitis, venereal disease and mental disorders.

A paper under the title "The Cancer Problem in Ontario" was presented by the Director at the Symposium on Cancer held at Sunnybrook Hospital on October 21-22, 1947. This paper reviewed the highlights of the problem as reflected by available mortality and morbidity data.

THE CHIEF CAUSES OF DEATH IN ONTARIO DURING 1946

This section of the Report is devoted to a presentation of the highlights of recorded mortality experience in Ontario during 1946. The tables which are included were derived from the official tabulations of causes of death, by age and sex, prepared by the Vital Statistics Branch of the Dominion Bureau of Statistics. The list of causes of death follows the Fifth Revision of the International List of 1938 and the figures in the tables are comparable with those of the last six years. All tables refer to deaths among residents of the Province.

The Crude Mortality Picture

The crude death rate for 1946 was 9.69 per 100,000 population. Despite the increasing proportion of population at the older ages, this is the lowest recorded figure to date. For the year 1945 the rate was 9.86 per 100,000 population.

In Table I there is presented the twenty "chief causes"* of death during 1946. The specific death rate per 100,000 population (all ages) and the percentage of all deaths attributed to each cause is also indicated.

TABLE I
CHIEF CAUSES OF DEATH—ALL AGES
ONTARIO, 1946

Rank	CAUSE OF DEATH	Int'l List Numbers	Number of Deaths	Specific* Death Rate	Per Cent of Total Deaths
1	Diseases of the heart.....	90-95	12,648	308.4	31.8
2	Cancer (all forms).....	45-55	5,414	132.0	13.6

20	Leukaemia and aleukaemia‡.....	74	185	4.5	0.5
TOTAL.....			36,060	8.79†	90.7
All Other Causes.....			3,698	0.90†	9.3
GRAND TOTAL.....			39,758	9.69†	100.0

*Rates per 100,000 estimated population (4,101,000).

†Rates per 1,000 population.

‡Excluding Hodgkin's Disease.

*"Chief Causes" has the force of "most frequent causes" without any other implication.

The twenty causes listed accounted for 36,060 deaths or 90.7 per cent of all deaths recorded during the year. The number of deaths attributed to "prematurity" increased by 252 or 25.7 per cent over the figure for 1945 and this cause assumed seventh position in the list of chief causes. Suicide, from which there were 307 deaths last year, contributed 414 deaths in 1946. Deaths from diarrhoea, enteritis, and dysentery declined still further and only 272 deaths were attributed thereto in 1946, compared with 320 in 1945 and 439 in 1944. Leukaemia and aleukaemia has replaced syphilis as the twentieth cause in the 1946 list.

Diseases of the Heart, Arteries and Kidneys (C.V.R.) together contributed 19,511 deaths or 49.1 per cent of all deaths recorded during the year. In Tables II and III it will be seen that most of these deaths occur among persons of 70 years of age or over.

Cancer (all forms) continued to contribute substantially to the death rate with a total of 5,414 recorded deaths or 13.6 per cent of the total deaths during 1946 attributed to these diseases. The specific cancer rate, 132 per 100,000 population, has remained unchanged since 1944.

Accidental Causes ranked fourth among the chief causes with 2,641 deaths or 6.6 per cent of the total deaths during the year. While the number of deaths attributed to accidental causes in 1946 was higher than in 1945, the increase was small (33).

Tuberculosis mortality, which had attained a new low point in 1945 with a rate of 25.3 per 100,000 population, showed a slight increase in 1946 with a rate of 25.7 per 100,000 population. This rate is still half of what it was in 1931 and almost 30 per cent below the rate for 1937. Three-fifths of the deaths from tuberculosis still fall at ages under 50 years (Table III).

It is essential that Table I be looked upon as presenting merely the *crude* mortality picture for the year. The public health significance of any cause in this table requires a more detailed examination of the individual diseases and conditions which are included in certain of the cause groups (e.g., accidental causes) and, in particular, a careful consideration of the age distribution of the deaths so classified.

Causes of Death by Age

In Table II there is shown a summary of the distribution by age of the twenty chief causes of death in the Province during 1946. The age groups included in this table were selected in order to reflect the mortality experience in age-bands which are of general interest.

Table III shows for each of the twenty principal causes of death included in Table I, the proportion of all deaths from each cause which had occurred by a given age. For instance, 0.2 per cent of the deaths from diseases of the heart occurred in children under 15 years of age, 20.0 per cent among persons under 50 years of age, etc.

TABLE II
CHIEF CAUSES OF DEATH BY AGE GROUPS
ONTARIO, 1946

*Excluding Hodgkin's Disease.

Chief Causes of Death in Selected Age-Groups

In Table IV and V are presented the eight leading causes of death in each of eight age-groups—infancy, 1-4 years, 5-14 years, 15-19 years, 20-49 years, 50-59 years, 60-69 years and 70 years and over. In these tables attention is focussed on those individual causes or groups of causes which are important in each of the age-bands. For each age group, the actual number of recorded deaths attributed to each cause, and the percentage of all deaths contributed to the total by each cause, are shown.

Infancy—Table IV shows the eight chief causes of death for 1946 during the first year of life. In this table are given the number of deaths for each cause together with the percentage of all infant deaths which are attributed to each cause and the infant mortality rate per 1,000 live births for 1946 and 1945.

TABLE IV
CHIEF CAUSES OF DEATH DURING INFANCY*
ONTARIO, 1946

Rank	CAUSE OF DEATH	Deaths in Age Group	Per Cent of Deaths in Age Groups due to Specified Cause	Specific Death Rate per 100,000 Live Births	
				1946	1945
1	Prematurity	1,232	33.7	1,264	1,241
2	Congenital malformations	654	17.9	671	767
3	Injury at birth	422	11.5	433	480
4	Pneumonia and bronchitis	375	10.3	385	412
5	Other diseases peculiar to early infancy	252	6.9	259	306
6	Diarrhoea, enteritis and dysentery	205	5.6	210	276
7	Accidental causes	108	3.0	111	133
8	Congenital debility	70	1.9	72	89
	Other causes	335	9.2	344	360
TOTAL		3,653	100.0	3,749	4,064

*First year of life.

During the year 1946 a total of 3,653 resident infant deaths occurred. This is a rate of 37.5 per 1,000 live births compared with 40.6 per 1,000 live births in 1945. *This is an all-time low in the history of this Province.*

Prematurity and congenital malformations were the two leading causes of death in this age-band. Prematurity contributed 1,232 deaths or 33.7 per cent of all deaths under one year of age. These figures compare with 980 deaths or 30.5 per cent of the total attributed to this cause in 1945. In congenital malformations there was but a slight increase in the number of deaths—654 in 1946 and 606 in 1945, but a decrease in the percentage of total recorded deaths—17.9 in 1946 and 18.9 in 1945. This situation arises out of the increase in the absolute number of births and deaths during 1946.

Injury at birth, which was in fourth position in 1945, contributing 325 deaths or 10.1 per cent of the total, assumed third position in 1946 with 422 deaths or 11.5 per cent of the total deaths recorded for infants under one year of age. The number of deaths attributed to the other five causes remained much the same as for the previous year. With the single exception of "prematurity" there was a recorded reduction in mortality from all causes of death among infants.

Data on the eight chief causes of death at ages one year and over are presented in Table V. For each age group, the actual number of recorded deaths attributed to each cause, and the percentage of all deaths contributed by each cause, are shown.

TABLE V
CHIEF CAUSES OF DEATH AFTER INFANCY

	Other causes.....	1,001	13.1
	TOTAL.....	7,618	100.0
Ages—70 years and over:			
1	Diseases of the heart.....	7,215	41.0
2	Intracranial lesions of vascular origin.....	2,638	15.0
3	Cancer (all forms).....	2,106	12.0
4	Nephritis.....	961	5.4
5	Accidental causes.....	820	4.7
6	Pneumonia and bronchitis.....	770	4.4
7	Diseases of the arteries.....	751	4.3
8	Diabetes mellitus.....	415	2.4
	Other causes.....	1,906	10.8
	TOTAL.....	17,582	100.0

Pre-School Ages—At these ages, 1-4 years, accidental causes continued to rank first in importance, contributing 166 deaths or 26.1 per cent of the total recorded deaths for this group. Pneumonia and bronchitis remained in second

position with 102 deaths or 16.0 per cent of the total. Together, these two causes were responsible for over two-fifths of the deaths among children of pre-school age. The percentage of deaths attributed to tuberculosis amounted to 8.2 per cent in 1946 compared with 5.4 per cent in 1945, while the mortality from measles (which did not appear among the eight causes for 1945) amounted to 28 deaths or 4.4 per cent of the total deaths recorded for this age-group. Leukaemia and aleukaemia accounted for 22 deaths.

School Ages—In the school-age period, 5-14 years, accidental causes was by far the most important group, there being 193 deaths or 36.5 per cent of the 529 deaths recorded for this age group. This is a better record than in 1945 when there were 224 accidental deaths. Tuberculosis contributed 46 deaths, cancer 26 deaths, pneumonia and bronchitis 22 deaths, congenital malformations 18 deaths and leukaemia and aleukaemia 14 deaths.

Adolescence—At ages 15-19 years, accidental causes still rank first. In 1946, a total of 118 deaths or 35.0 per cent of all deaths in this age group were attributed to accidental causes. Tuberculosis ranked second with 55 deaths. Together these two causes accounted for 51.3 per cent of all deaths at ages 15-19 years. The total number of deaths from all causes for this group showed a significant decrease from 391 in 1945 to 337 in 1946.

Ages 20-49 years—It is significant that diseases of the heart and cancer remain the two leading causes of death for this age group, contributing 1,631 deaths or 34.6 per cent of the total of 4,703 deaths recorded for this age-group. Accidental causes were responsible for 723 deaths or 15.4 per cent of the total. The number of deaths due to tuberculosis increased slightly from 501 deaths or 10.5 per cent of the total in 1945 to 518 deaths or 11.0 per cent of the total in 1946. Of all deaths attributed to tuberculosis during the year, 50 per cent were in this age-group (Table III).

Ages 50 Years and Over—Among persons of 50-69 years of age, diseases of the heart, arteries and kidneys are the leading causes of death with cancer in second position. At these ages one death in every five in 1946 was attributed to cancer. Accidental causes, diabetes mellitus, pneumonia and bronchitis and tuberculosis follow in that order. At ages 70 and over, 61.5 per cent of all deaths were classified as due to C.V.R. disease, followed in importance by cancer, accidents, pneumonia and bronchitis, and diabetes mellitus.

New Records Established in 1946

The vital records of Ontario for 1946 indicate further gains of significance for the public health. These include the following:

- (a) A new low in the crude death rate—9.69 per 1,000 population.
- (b) A new low in the maternal mortality rate—1.6 per 1,000 live births.
- (c) A new low in the infant mortality rate—37.5 per 1,000 live births.

This resume of the recorded mortality experience in Ontario during 1946 is designed merely to provide a few highlights. The observations made can be supplemented by perusal of the data included in the statistical tables, or by reference to the original data contained in the Report of Births, Marriages and Deaths for Ontario for 1946.

THE TWELFTH ANNUAL STATISTICAL REPORT ON CANCER
CALENDAR YEAR—1947

Prepared by the Medical Statistics Branch
A. H. SELLERS, B.A., M.D., D.P.H., Director

This Report, The Twelfth Annual Statistical Report on Cancer in Ontario, includes a brief review of important developments during the year, a discussion of the highlights presented by the recorded cancer mortality data and a statistical summary of the work of the Ontario Cancer Centres during the calendar year 1947.

Last year a beginning was made toward extending the scope of the section of the Report devoted to the Ontario Cancer Centres by the inclusion of some information on duration of symptoms and delay in treatment. More data of this nature has been added this year. In future, considerably more information will be produced and increasingly effective use made of the great wealth of statistical data on some 25,000 cases of cancer which have been accumulated in the seven Cancer Centres.

SECTION I—CANCER MORBIDITY STUDIES

Still the greatest need in the field of cancer control is a reasonably accurate estimate of the incidence or prevalence of cancer in any community. Mortality data, however accurate, can never meet this need. The morbidity studies which were initiated in 1938 and 1939 (see earlier Reports) were deferred indefinitely in 1940. This work was revived during 1946 but as yet has not been finalized. When completed these reports will afford useful information on the incidence and prevalence of cancer which is not yet available in Ontario.

The trial plan for the reporting of cancer or suspected cancer which was initiated on a voluntary basis in certain of the Districts of Northern Ontario in October, 1946, is still in operation. A review of the reporting experience during the first year is presented in Section IV of this Report on pages 216 to 222. There are indications that this plan will provide valuable information on the incidence of known or diagnosed cancer and will afford a measure of the extent to which facilities for diagnosis, treatment and hospitalization are required.

SECTION II—CANCER MORTALITY IN ONTARIO

Emphasis continues to be placed on the leading position occupied by cancer among the causes of death. In Table A, the recorded volume of deaths attributed to cancer in Ontario during the past twenty years is presented. The relationship between total deaths from all causes and cancer deaths is also indicated.

TABLE A
RECORDED CANCER MORTALITY
ONTARIO, 1927-1946

YEAR	Total Deaths, All Causes	Cancer Deaths	Per Cent of Total Deaths	Crude* Death Rate	Adjusted† Death Rate
1927.....	34,775	3,117	9.1	99	117
1928.....	37,128	3,441	9.3	105	123
1929.....	38,123	3,402	8.9	102	119
1930.....	37,313	3,635	9.7	109	124
1931.....	35,705	3,726	10.4	109	125

1942.....	39,119	5,005	12.8	129	129
1943.....	41,063	5,193	12.6	133	132
1944.....	39,781	5,236	13.2	131	129
1945.....	39,499	5,294	13.4	132	129
1946.....	39,758	5,414	13.6	132	128

*Rate per 100,000 estimated population, all ages.

†Adjusted rate per 100,000 population adjusted for age and sex based on the population of Ontario, 1941 census.

The absolute number of recorded cancer deaths has increased by 74 per cent since 1927. The proportion of all deaths attributed to cancer has risen from 9.1 in 1927 to 13.6 in 1946. The crude cancer death rate has risen from 99 deaths per 100,000 population in 1927 to 132 per 100,000 in 1945. There has been little change in the crude death rate during the past seven years.

It is important that the limitations of these crude data as an index of the trend in cancer mortality should be realized. The recorded increases in the volume of cancer deaths and in the crude cancer death rate do not necessarily reflect a true increase in the incidence, prevalence or mortality from cancer. In fact, correction for changes in the age distribution of the population by sex, alone eliminates a large part of the observed increase. This fact is illustrated by the adjusted cancer death rate given in the last column of Table A. Much of the increase which remains may be accounted for by improvement in the quality of medical certification and the increasing attention given to this disease.

Site of Disease

Significant sex variations in "organ incidence" exist in cancer mortality. An appreciation of these variations is important in interpreting the problem and in assessing the degree of control which can be exercised with available methods and facilities.

Table B presents the distribution of cancer deaths by site and sex for the five-year period 1942-1946.

TABLE B
CANCER DEATHS BY SEX AND SITE OF DISEASE
ONTARIO, 1942-1946

SITE OF DISEASE	Males		Females		Both Sexes	
	No. of Deaths	Per Cent of Total	No. of Deaths	Per Cent of Total	No. of Deaths	Per Cent of Total
Stomach and duodenum.....	2,699	21.4	1,554	11.5	4,253	16.3
Other digestive tract.....	4,159	33.0	4,194	31.0	8,353	32.0
Genital organs.....	1,467	11.6	2,775	20.5	4,242	16.2
Breast.....	32	0.3	2,771	20.5	2,803	10.7
Buccal cavity and pharynx.....	679	5.4	179	1.3	858	3.3
Urinary organs.....	965	7.6	522	3.9	1,487	5.7
Respiratory organs.....	1,249	9.9	430	3.2	1,679	6.4
Skin.....	267	2.1	133	1.0	400	1.5
Other and unspecified sites.....	1,105	8.7	962	7.1	2,067	7.9
TOTAL.....	12,622	100.0	13,520	100.0	26,142	100.0

Of the 26,142 deaths from cancer during the five-year period, 12,606 deaths or 48.3 per cent were classified cancer of the digestive tract (including oesophagus, stomach and duodenum, intestines, rectum, liver and pancreas, etc.). The principal single site of importance among men is stomach and duodenum which accounted for 2,699 deaths or 21.4 per cent of the total male cancer deaths during the period. Cancer of the breast is the individual leading site of importance among women with 2,771 deaths or 20.5 per cent of the total female deaths attributed to cancer. The ratios of male to female mortality show striking differences. Deaths from cancer of the stomach and duodenum, buccal cavity, urinary organs, respiratory system and skin are more common among males than among females.

Cancer cases which are particularly amenable to treatment, including cancer of the genital organs, breast, buccal cavity and skin, comprised 31.7 per cent of all cancer deaths in 1945. Among women, this group contributed 43.3 per cent of all female cancer deaths during this period.

TABLE C
CANCER AS A CAUSE OF DEATH BY AGE
ONTARIO, 1946

AGE GROUP	Number of Cancer Deaths	Per Cent of All Deaths	Rank as a Cause of Death	Specific* Death Rate	Per Cent of All Deaths from Cancer
0-19.....	62	1.2	5	1.1
20-49.....	726	15.4	Second	40	13.4
50-59.....	1,011	21.6	Second	234	18.7
60-69.....	1,508	19.8	Second	501	27.9
70 and over.....	2,107	12.0	Third	1,013	38.9
TOTAL.....	5,414	13.6†	Second	132	100.0

*Per 100,000 estimated population at ages.

†Total deaths in 1946 were 39,758.

Cancer as a Cause of Death at Selected Ages

The recorded mortality from cancer during 1946 in selected age groups is given in Table C.

During the year, 5,414 deaths or 13.6 per cent of the total of 39,758 deaths were attributed to cancer. This disease ranked second as a cause of death in the age groups 20-49, 50-59 and 60-69 years, being exceeded only by deaths from heart disease. At ages 50-69 years, one death in every five was attributed to cancer. Persons 50 years of age or over accounted for 85.5 per cent of all cancer deaths.

Sex Differences in Cancer Mortality, at Ages

In Table D is presented the recorded cancer mortality by age and sex over the five-year period 1942-1946. There are significant differences between the two sexes in the force of cancer mortality throughout life. These differences are indicated in the table.

TABLE D
CANCER MORTALITY BY AGE AND SEX
ONTARIO, 1942-1946

AGE	Males				Females			
	Annual Deaths	Per Cent of All Deaths	Per Cent of Cancer Deaths	Annual* Rate	Annual Deaths	Per Cent of All Deaths	Per Cent of Cancer Deaths	Annual* Rate
Under 30....	52	1.5	2.1	5.2	47	1.8	1.7	4.8
30-39.....	59	7.9	2.3	19.6	113	17.6	4.2	38.7
40-49.....	175	12.4	6.9	67.6	317	30.5	11.7	129.4
50-59.....	435	15.3	17.2	202.8	542	28.4	20.1	265.5
60-69.....	740	16.7	29.3	514.6	700	21.8	25.9	489.4
70 and over...	1,064	12.1	42.2	1,144.1	985	11.2	36.4	936.5
TOTAL....	2,525	11.6	100.0	125.7	2,704	14.9	100.0	197.9

*Per 100,000 population at ages.

The percentage distribution of cancer deaths by age for each sex during the five-year period 1942-1946 is illustrated by Figure I.

There is little difference between the sexes in the cancer mortality rate at ages up to 30 years. At ages 30-49 years, the cancer death rate among females is almost twice that among males. A sharp female excess persists up to age 60, there is little difference in the age-group 60-69 years, at ages 70 and over there is a sharp male excess.

Cancer is the leading cause of death among women in the age-group 30-59 years. At ages 30-39, 17.6 per cent of all deaths are attributed to cancer; at ages 40-49 years, 30.5 per cent; and at 50-59 years, 28.4 per cent.

FIGURE I
AGE DISTRIBUTION OF CANCER DEATHS
ONTARIO - 1942 TO 1946

Deaths from Cancer of the Accessible Sites at Ages Under 70 Years

In Table E there is shown the number and proportion of deaths attributed to cancer of the so-called "accessible" sites at ages under 70 years in Ontario during 1946.

TABLE E
"ACCESSIBLE" CANCER MORTALITY AT AGES UNDER 70 YEARS
ONTARIO, 1942-1946

SITE OF DISEASE	Males		Females	
	No. of Deaths	Per Cent	No. of Deaths	Per Cent
Oral Cavity.....	310	4.3	98	1.2
Breast.....	14	0.2	1,961	22.8
Uterus.....	-	0	1,513	17.6
Skin.....	82	1.1	44	0.5
TOTAL.....	406	5.6	3,616	42.1
Other Sites.....	6,897	94.4	4,977	57.9
GRAND TOTAL.....	7,303	100.0	8,593	100.0

Of the total of 15,896 deaths of persons under 70 years of age which were attributed to cancer over the five-year period 1942-1946, 4,022 deaths or 25 per cent were cancer of the accessible sites—breast, uterus, oral cavity and skin, and of these 4,022 cancer deaths, 90 per cent were among women.

The data in Table E show that of the 7,303 recorded deaths among males under the age of 70 years during the period 1942-1946, only 406 deaths or 5.6 per cent were due to cancer of the specified sites. In contrast, of the 8,593 recorded cancer deaths among women at ages under 70 years, 3,616 deaths or 42.1 per cent were in the "accessible" group—breast contributing 22.8 per cent and uterus 17.6 per cent.

Site Differences in Cancer Mortality at Ages

Cancer mortality during 1946 by age and site of disease, is presented in Table F.

TABLE F
CANCER MORTALITY BY AGE AND SITE OF DISEASE
ONTARIO, 1946

SITE OF DISEASE	<30	30-39	40-49	50-59	60-69	70+	Total
	Number of Deaths

Other or unspecified sites.....	2.5	4.9	10.8	21.8	34.6	48.1	10.6
TOTAL.....	5.4	30.8	93.9	234.2	501.3	1,012.5	132.0

*Excluding uterus.

Cancer of the stomach and duodenum is the principal single site of importance in each age-group. This site contributed 838 of the total of 5,414 deaths, a rate of 20.4 per 100,000 population. A total of 1,739 deaths, 42.4 per 100,000 popula-

tion, were attributed to other cancer of the digestive tract (including oesophagus, intestines, rectum, liver pancreas, etc.). The next individual site of leading importance is breast, contributing 579 deaths or 14.1 per 100,000 population. Cancer of the uterus contributed 392 deaths or 9.6 per 100,000 population.

The essential features of the distribution of cancer deaths by site for each sex, during the five-year period 1942-1946 are illustrated by Figure II.

FIGURE II
SITE DISTRIBUTION OF CANCER DEATHS
MORTALITY EXPERIENCE — ONTARIO, 1942 TO 1946

Cancer of the digestive system is the leading site of cancer in both men and women. Cancer of the breast and uterus are the principal individual sites among women and cancer of the stomach among men. Among women cancer of the accessible sites (genital organs, breast, buccal cavity, and skin) contribute 43.3 per cent of all deaths.

SECTION III—THE WORK OF THE ONTARIO CANCER CENTRES DURING 1947

In the following section there is presented an analysis of the work of the seven Ontario Cancer Centres during the calendar year 1947. The tabulations throughout were made by the Medical Statistics Branch from data recorded on the individual "follow-up" cards for all new cases admitted to the Ontario Cancer Centres during the year 1947. This year, as in 1946, in addition to the usual tables by age, sex, site of disease and method of treatment, supplementary tables dealing with special features not regularly reported upon have been added.

The volume of new cases on record and new cases treated in each of the seven Centres during 1947 is shown in Table 1.

TABLE 1
NEW CASES ADMITTED—BY CENTRE

CENTRE	Cancer Cases						Non-Cancer Cases†	Total New Patients Treated
	On Record			Treated*				
	Private	Public	Total	Private	Public	Total		
Hamilton....	459	77	536	456	75	531	677	1,208
Kingston....	291	78	369	261	71	332	604	936
London....	361	109	470	360	106	466	895	1,361
Ottawa (C)...	326	67	393	307	65	372	315	687
Ottawa (G)...	189	39	228	145	20	165	315	480
Toronto....	429	794	1,223	401	748	1,149	738	1,887
Windsor....	262	56	318	227	50	277	264	541
TOTAL....	2,317	1,220	3,537	2,157	1,135	3,292	3,808	7,100

*Treated by any method or combination. Includes cases treated by surgery alone, but excludes palliative surgery.

†Non-malignant tumours and non-neoplastic diseases.

During the year there were recorded 3,537 cases of cancer.* This is 35 cases less than were recorded in 1946. Of the 3,537 cases admitted, 3,292 cases or 93.1 per cent received treatment; the remainder (245) were not treated for one reason or another. In addition, 3,808 patients were treated for benign tumours and non-neoplastic diseases. A total of 7,100 patients were *treated* in the seven Centres, an increase of 189 patients over the previous year.

The number of patients designated as private exceeded the number of public patients in the ratio of 2 to 1. The variations in this ratio from one Centre to another may be accounted for in large measure by differences in the definition of the term "public".

In Table 2 there is given the distribution of the 3,537 new cases, by site of disease, in broad groups.

*Cancer includes leukaemia and Hodgkin's disease.

TABLE 2
NEW CANCER CASES ADMITTED BY SITE OF DISEASE

CENTRE	Breast		Uterus		Oral Cavity		Air Passages		Rectum		Other Sites		TOTAL	
	Private	Public	Private	Public	Private	Public	Private	Public	Private	Public	Private	Public	Private	Public

PER CENT.....	17.0		13.3		10.8		2.2		2.6		54.1		100.0	

Comparison of the total number of cases for each site with those in the 1946 report, shows an increase in the number of cases admitted in the "Other Site" group amounting to 85 cases. There were 78 cases of cancer of the air passages compared with 76 in 1946 and the remaining sites all show a decrease in the number of cases admitted compared with the previous year. The proportion of cases of each site remained much the same as in 1946.

Trends in Volume of Treated Cases

The present uniform system of record-keeping has been in operation in all seven Ontario Cancer Centres for ten full years, having been introduced in August, 1937. It is useful, therefore, to record the trend in case volume during this period. A summary of the new cases treated, by site of disease, for the period 1938-1947 inclusive, is given in Table 3 for all Centres combined. Data for each Centre, all sites combined, are given in Table 4.

TABLE 3

*Treated by any method or combination. Includes cases treated by surgery alone but excludes palliative surgery.

These tables illustrate the steady increase in case volume from 1938 to 1946. In 1947, however, the number of cases treated in the seven Centres was actually 43 fewer than in 1946; Centres at Hamilton, Kingston, London and Ottawa General show an increase but this has been offset by decreases in the remaining three Centres. The ratios of the 1947 case-volume to that for 1938, for each Centre, are as follows: Hamilton 1.76; Kingston 1.78; London, 3.19; Ottawa Civic 1.47; Ottawa General 1.70; Toronto 1.17; Windsor 2.04.

A comparison of the volume of new cases treated by radiotherapy (alone or in combination with other methods) in each Centre, during the five-year period 1943-1947, inclusive, is given in Table 5.

*Alone or in combination with surgery or other methods.
Cases treated by surgery alone, cases not treated and recurrences are excluded.

The total number of new cases treated by radiotherapy in 1947 (excluding recurrences) was 2,918. This is a decrease of 95 cases or 3 per cent below 1946. All Centres other than Hamilton, Kingston and Ottawa General show a reduction. The recorded increases for these three centres were: Hamilton, 9.3 per cent; Kingston, 4.7 per cent; and Ottawa General, 4.7 per cent.

A summary of the number of cases treated during the year, by site of disease and status, is given in Table 6, the number of patients who were reported alive at December 31, 1947, being indicated in each case.

*As of December 31st. 1947 (reported).

†Including buccal surface of cheek, tonsil, etc.

‡Including leukaemia, Hodgkin's disease, etc.

These data indicate that 70.2 per cent of the new cases treated by radiotherapy or surgery or both (including recurrences) had cancer of the so-called "accessible" sites (breast, uterus, oral cavity and skin). This figure is much the same as it has been in previous years. Skin cases comprised 27.9 per cent of all cases treated during the year, breast cases comprised 17.4 per cent, and cervix uteri 13.7 per cent. The recorded percentages for both skin and cervix uteri are slightly higher than for the previous year.

New Cases Treated—By Site and Centre of Treatment

The distribution of new treated cancer cases by centre, site of disease and status, is given in Table 7.

*By radium, x-ray or surgery, or any combination of these three.

†Including buccal surface of cheek, tonsil, etc.

‡Including air sinuses, larynx, pharynx, and nasal fossae.

§Including leukaemia, Hodgkin's disease, etc.

It is noted that there has been an increase in the volume of treated cases for each of the following sites: body of uterus, 18 per cent; skin, 4 per cent; ovary, 10 per cent. For the individual remaining sites, the volume of treated cases was less than in 1946. Cancer of the lip, in particular, showed a decrease of 64 cases or 25 per cent.

Stage of Disease at the Beginning of Treatment

In view of the marked differences in "survival" rates in early and late cases, considerable interest attaches to data on the stage of disease at the time when treatment is sought, and to any trends toward earlier treatment such as might be reflected by a shortening of the interval between first recognized symptom or sign and diagnosis as well as between diagnosis and treatment, and by the proportion of cases reaching treatment centres in the earlier stages of disease.

In assessing the recorded data on these points, it must be kept in mind that, with improvement in methods, treatment may be undertaken now in cases which formerly might have been considered too far advanced for treatment.

In Table 8, data are presented on the recorded stage of disease at the time the patient first presented himself for treatment. Data for the two periods, 1939-1941 and 1942-1946, are given for comparison with the 1947 experience. Recurrences are excluded from these data.

*Excluding recurrences.

The improvement in the proportion of new cases in the early stages remains on the whole, quite small. The improvement in cervix uteri is the most significant of all with 27.6 per cent classed as Stage I in 1947 compared with 16.8 per cent in the five-year period 1942-1946. The figures for breast show definite improvement but if the "not stated" group is excluded, there is no material change over the whole period. Excluding cases in which stage of disease was not recorded,

41 per cent of the patients with cancer of the breast, cervix uteri and oral cavity presented themselves for treatment during 1947 before local spread, extension or metastasis had occurred.

The changes which have taken place in the percentage distribution of new cases by stage of disease on admission are illustrated by Figure III. In preparing this chart the percentages have been computed excluding the cases for which the stage of disease was not recorded.

FIGURE III
STAGE OF DISEASE ON ADMISSION - CERTAIN SITES*
CASES TREATED 1939-41, 1942-46 AND 1947

There continues to be evidence of greater delay in seeking treatment (in terms of stage of disease when treatment is begun) in public patients as compared with private patients. In Table 9, data on stage of disease for certain sites, for public and private cases separately, illustrate the point.

TABLE 9
STAGE OF DISEASE—PRIVATE AND PUBLIC CASES—CERTAIN SITES*
NEW TREATED CASES ONLY

STAGE OF DISEASE	Breast				Cervix uteri				Oral Cavity			
	Private		Public		Private		Public		Private		Public	
	No.	%	No.	%	No.	%	No.	%	No.	%	No.	%
I	143	39.3	23	14.7	58	38.2	32	18.4	137	61.2	47	34.8

III	67	18.4	48	30.8	38	25.0	67	38.5	22	9.8	28	20.8
IV	—	0	—	0	6	3.9	30	17.2	2	0.9	20	14.8
N.S.	20	5.5	32	20.5	7	4.6	8	4.6	8	3.6	5	3.7
TOTAL	364	100.0	156	100.0	152	100.0	174	100.0	224	100.0	135	100.0

*Excluding recurrences.

The recorded data on the breast cases are of limited significance because the stage of disease was not recorded in 20 per cent of the public cases. The picture for cervix uteri and oral cavity cases is quite striking. In cancer of the cervix uteri, 38.2 per cent of the "private" cases were Stage I compared with only 18.4 per cent in the "public" cases. In cases of oral cancer, 61.2 per cent of the private patients presented themselves for treatment in the early stage, compared with only 34.8 per cent of public cases.

Classification of New Cases Recorded During 1947

A summary of the 3,537 new patients recorded by the seven Cancer Centres during 1947, indicating the number with recurrences and the number not treated (for any reason) is presented in Table 10.

TABLE 10
CLASSIFICATION OF NEW CASES ADMITTED BY SITE OF DISEASE

SITE OF DISEASE	Classification				TOTAL
	Primary	Previous	Recurrent	Not Treated	
Breast	192	328	52	28	600
Cervix uteri	309	17	8	12	346
Body of uterus	74	32	10	8	124
Oral cavity	349	10	9	13	381
Air passages	69	3	2	4	78
Rectum and anus	62	3	10	18	93
Skin	828	63	28	31	950
Other sites	551	216	67	131	965
TOTAL	2,434	672	186	245	3,537
PER CENT	68.8	19.0	5.3	6.9	100.0

There is little change in the proportion of cases classified in each group although the absolute number of patients classified as "primary", "previous"* and "recurrent" are somewhat less for 1947 than for the previous year. The number of patients admitted to the Centres but who were not treated (245) showed a slight increase over last year (237). Further details on these untreated cases are given in Table 17.

Histological Confirmation of Clinical Diagnosis

A pathological report was available in 2,840 or 86 per cent of the total of 3,292 new cases treated during the year at the time this Report was prepared. The frequency of recorded histological examination, by site of disease, is given in Table 11.

TABLE 11
HISTOLOGICAL EXAMINATION OF NEW CASES TREATED
BY SITE OF DISEASE

SITE OF DISEASE	Pathology Done		Pathology Not Done		No Data		TOTAL	
	Private	Public	Private	Public	Private	Public	Private	Public
Breast.....	357	161	32	13	8	1	397	175

TOTAL.....	858	90.1	952	547	93.2	587

*Includes breast, uterus, oral cavity, air passages and rectum.

A pathological report was available in over 90 per cent of all breast, uterus, oral cavity, air passages and rectum cases. This figure has shown considerable improvement over the past ten years. In 1939, for example, the proportion of new treated cases of these sites in which a pathological report was available was 77.4 per cent.

Prognosis

Each follow-up card provides for a statement of whether the patient is regarded at the outset as treatable for cure, or for palliation only. A summary of the data given for all new cases recorded during 1947 is set out in Table 13.

TABLE 13
TOTAL NEW CASES BY PROGNOSIS AND SITE OF DISEASE

SITE OF DISEASE	Treatable for			No Data	Not* Treated	TOTAL
	Cure	Palliation	Ratio			
Breast.....	400	144	2.8	28	28	600
Cervix uteri.....	233	96	2.4	5	12	346
Body of uterus.....	84	29	2.9	3	8	124
Lip.....	181	13	13.9	1	3	198

Other sites§.....	214	525	0.4	8	126	873
TOTAL.....	2,198	1,038	2.1	56	245	3,537
PER CENT.....	62.2	29.3	...	1.6	6.9	100.0

*For any reason—see subsequent section and tabulation.

†Including buccal surface of cheek, tonsil, etc.

‡Including air sinuses, larynx, pharynx and nasal fossae.

§Including leukaemia, Hodgkin's disease, etc.

In 2,198 cases or 62.2 per cent of the total, the patient was recorded as treatable for cure. Patients classified as treatable for palliation only, amounted to 1,038 or 29.3 per cent of the total. The ratio of cases treatable for cure to those treatable for palliation only reflects, among other things, the stage of disease when treatment was begun and the susceptibility to treatment in general.

Method of Treatment

A general summary of the methods of treatment of new cases during the year (excluding recurrences) is given in Table 14.

Of all cases, 748 or 22.3 per cent were treated by radium alone. Radium, alone or in combination with x-ray, surgery, or both, was employed in 35.8 per cent of the cases. X-ray, in combination with radium, surgery or both, was employed in 63.3 per cent of the cases. Cases treated by radiotherapy alone comprised 66.0 per cent of the cases. Surgery, alone or in combination with other forms of treatment, was used in 26.7 per cent of all the cases.

The distribution of treated cases (excluding recurrences) by method of treatment, for each Centre, is presented in Table 15.

TABLE 14

*Excludes recurrences.

†Percentages calculated only where 5 or more cases.

Radium alone was used in only 5.1 per cent of the cases in one Centre compared with 36.8 per cent in another. This trend also applies when the method of treatment involves radium in combination with the other methods. X-ray alone was employed in 65.1 per cent of the cases in one Centre compared with 12.7 per cent in another.

These data must not be used alone as a basis for comparing treatment practice among the seven Cancer Centres. While the wide variations shown in Table 15 are so great as to suggest real differences in treatment procedure, data for individual sites alone are useful for this purpose.

The proportions of cases treated by radium alone, and by radium alone and in combination with other methods of treatment, for cervix uteri, oral cavity and skin cases, for each Centre, are given in Table 16.

TABLE 16
PROPORTION OF CASES TREATED WITH RADIUM BY CENTRE*

TOTAL (%).....	14	46	51	77	63	58

*Excludes recurrences.

†With x-ray, surgery or both.

These data provide a better basis for comparison between the Centres in respect of treatment procedure. Most striking in this table are the differences in the proportions of cases of cancer of the skin which are treated by radium alone or in combination with other methods. Hamilton and London stand in sharp contrast to the Ottawa Civic and Toronto Centres in this respect.

Untreated Cases

Of the 3,537 cases admitted to the seven Centres during 1947, 245 or 6.9 per cent were not treated. The number of untreated cases reported by each Centre were as follows: Hamilton, 5; Kingston, 37; London, 4; Ottawa Civic, 21; Ottawa General, 63; Toronto, 74; Windsor, 41.

The reasons recorded for non-treatment are summarized in Table 17.

TABLE 17
 UNTREATED CASES BY REASON FOR NON-TREATMENT

REASON FOR NON-TREATMENT	SITE OF DISEASE						TOTAL

PER CENT (by sex).....	10.1	10.8	9.8	20.4	20.1	24.2	26.2	22.2	22.4	16.1	9.2	4.9	2.2	1.4	100.0	100.0
RATIO OF MALES TO FEMALES.....	0.79		0.40		0.69		0.98		1.16		1.57		1.27		0.84	

Of the 3,292 new treated cases, 1,498 were males and 1,794 were females. This is equivalent to a ratio of 84 male cases to each 100 female cases. Female cases substantially exceeded male cases at all ages under 60 years. At 60-69 years the sexes are equally represented. At ages 70 and over there is a substantial male excess.

Of the total of 1,794 female cases, 55.4 per cent were under the age of 60 years compared with 40.1 per cent of male cases. The sharp sex differences in recorded frequencies of cancer of the breast, lip, larynx and skin are striking.

Geographic Distribution of New Treated Cases

The new treated cases are distributed by county or district of residence in Table 19. Data for 1946 are included for comparison. The 1947 case distribution is illustrated by Figure IV.

*Per 100,000 estimated population (1946—4,101,000; 1947—4,189,000).

†Including breast, uterus, oral cavity and skin.

‡Including District of Patricia. §Rate not computed.

The treated case load for 1947 was 75.3 per 100,000 population compared with 78.3 in 1946 and 70.4 in 1945. The case rate varied from 189 per 100,000 population in Frontenac and 142 in Middlesex to 15 per 100,000 population in Thunder Bay. The recorded case rate in the counties in which the Cancer Centres are located substantially exceeds the rate for the Province as a whole in all instances except York County.

The reliability of many of the crude rates shown in Table 19 is limited by the smallness of the recorded experience. For this reason sizable fluctuations from year to year are to be expected. Accumulation of data for at least a five-year period will be required before effective comparison can be made and age-adjusted rates prepared. It is noteworthy, however, that for the most part the rates for the various counties and districts for 1947 are of the same general order (high, average or low) as they were in 1946 and 1945 as well as in 1938 and 1939. This fact makes it reasonable to refer to the recorded rates as being high (100 or over), average (60-99), or low (under 60).

It is emphasized that the individual county and district rates in Table 19 merely reflect the extent to which various part of the Province contribute to the total recorded treated case load in the seven Cancer Centres. *They do not reflect the comparative incidence or prevalence of cancer* for at least two very good reasons. In the first place, by no means do all of the new cases of cancer—even cancer of the “accessible” sites—reach the seven Ontario Cancer Centres. Many cases are treated elsewhere even in those cities where the Centres are located. In the second place, the age distribution of the population in any area is an important factor in determining the number of cases requiring treatment and the annual number of recorded deaths.

Scope of Service—Professional Interest

A summary of the number of physicians referring cases of cancer to each of the Cancer Centres for treatment during 1947 is given in Table 20.

TABLE 20
REFERRING PHYSICIANS BY CENTRE

CENTRE	New Cases on Record	No. of Different Referring Physicians	Different Physicians per New Case
Hamilton.....	536	264	0.49
Kingston.....	369	120	0.33
London.....	470	213	0.45
Ottawa Civic.....	393	171	0.44
Ottawa General.....	228	51	0.22
Toronto.....	1,223	683	0.56
Windsor.....	318	138	0.43
TOTAL.....	3,537	1,640	0.46

A total of 1,640 physicians, or about one-third the number in practice in Ontario, each referred one or more new cases of cancer during 1947. This fact, and the widespread distribution of cases throughout the Province (Table 19), serve to indicate the scope and recognition of the service available.

Delay in Treatment

Data have been presented in Tables 8 and 9 to illustrate the substantial proportion of patients reaching the clinics after local spread, extension or metastasis has occurred. The extent of delay in diagnosis and treatment, in terms of time since recognizable symptoms or signs were present, is difficult if not impossible to determine accurately for the reason that statements made by patients as to date of onset of disease (first sign or symptom) are unreliable in a great many cases. Patients who present themselves in the early stages of disease are more likely to report the appearance of the first sign or symptom accurately. On the contrary, patients with far advanced disease are likely to understate the duration of disease.

The recorded durations of symptoms in a group of *new* cases of cancer of the breast, cervix and lip treated during 1947 are presented in Table 21. These data were taken directly from the follow-up cards and refer to the recorded intervals between date of first recorded sign or symptom and the date of admission to the Centre for treatment. Intervals are to the nearest month and figures are given separately by site and stage of disease.

Almost one-half of the cases of cancer of the breast and cervix had had symptoms for six months or longer before receiving treatment. The figures are as follows: breast, 43.8 per cent and cervix 43.2 per cent. In the case of lip cancer the proportion of cases which had had a symptom for six months or longer amounted to 58.2 per cent. Of the 520 cases of cancer of the breast, 211 cases or 40.6 per cent were admitted for treatment within three months of recorded onset. For cervix cases the percentage amounted to 34.3 per cent and for lip cases 24.9 per cent.

Another aspect of the problem of early treatment is that of delay following first consultation of patients with a physician for signs or symptoms referable to cancer. Data on the recorded intervals between date of first consultation and admission to the Centre for treatment are given in Table 22. The cases included in this table are the same as those covered by Table 21.

	PER CENT	51.9	14.3	6.3	2.6	2.1	0	3.7	2.6	3.7	0	6.4	100.0	

*Excluding recurrences.

Of the 520 cases of cancer of the breast, 39.2 per cent received treatment within one month of their first consultation. For cancer of the cervix the percentage amounted to 40.5 per cent while for cancer of the lip, 51.9 per cent received treatment within one month of their first consultation.

Considerably more data are required to afford a precise statistical appraisal of the delays which occur between the reported onset of disease, diagnosis and treatment. The facts presented in Tables 21 and 22, however, are most striking.

Non-Cancer Cases

During 1947, a total of 3,871 cases diagnosed as non-malignant tumours or non-neoplastic diseases, were treated in the seven Cancer Centres. A summary of the main diagnosis groups is presented in Table 23.

TABLE 23
NON-CANCER CASES

Non-malignant Tumours		Non-neoplastic Diseases	
Diagnosis	Cases	Diagnosis	Cases
Angiomata, haemangiomata	441	Actinomycosis	5
Cysts (various)	87	Asthma	7
Fibromata	17	Cervicitis	71
Keloids	61	Diseases of the thyroid	7
Keratosis	404	Fibrosis uteri	7
Leukoplakia	74	Infections n.s.e.	257
Moles, naevi	110	Mastitis	86
Papillomata	157	Menorrhagia, etc.	176
Polypi	30	Parotitis	20
Warts	405	Pruritis	32
Others	248	Skin diseases (various)	558
		Thymic enlargement	35
		Tuberculosis	13
		Consultation only	129
		Others	434
TOTAL	2,034	TOTAL	1,837

Of the total number, 2,034 were cases of non-malignant tumours (including "precancerous" conditions such as leukoplakia) and 1,837 were non-neoplastic diseases. Of interest is the large number of cases of leukoplakia and keratosis.

SECTION IV—NOTIFICATION OF CANCER IN NORTHERN ONTARIO A REVIEW OF EXPERIENCE DURING THE FIRST YEAR

In November, 1946, a plan for the voluntary reporting of cases of cancer or suspected cancer was inaugurated in the Districts of Northern Ontario served by Cancer Diagnostic Centres located at Sudbury, Timmins, Fort William and Port Arthur. This activity is carried on jointly by the Department of Health for Ontario and the Ontario Cancer Treatment and Research Foundation. Under the plan, case reports are made by physicians to the appropriate Diagnostic Centre on a special notification form designed for the purpose (Appendix A). These reports are actioned by the Diagnostic Centre concerned and are then transmitted forthwith to the Medical Statistics Branch of the Department of Health, where the necessary record and statistical action is taken.

Following receipt of the notification of a case to a Diagnostic Centre, a set of the appropriate cancer case history forms is returned to the reporting physician. When the completed history is received, the Foundation pays the physician a fee of two dollars. Provision is also made under the plan for the payment of a follow-up fee of one dollar for each annual examination.

The objectives of cancer reporting include the procurement of accurate data on the incidence of cancer, and the facilitating of early and adequate treatment and follow-up. The data secured under the present scheme, if successful, will serve to throw some light on the incidence of diagnosed cancer (as reported) and to provide some idea of the need for treatment facilities for cancer in Northern Ontario.

Having in mind the original objectives of the reporting plan, and since this is the first occasion on which data on reported cases of cancer of all sites have been available for any area in Ontario, it seemed desirable to review the recorded information carefully. The present Review covers all cases reported from the date the reporting scheme was inaugurated to the end of 1947. Few reports were made during the first few weeks and for practical purposes the period covered by this Review may be regarded as being the calendar year 1947.

The data contained in this Review are not to be regarded as a measure of the incidence or site distribution of cancer in the area covered by the plan. Such an assumption cannot be made until comprehensive reporting in the area is assured and until we have information on the date of onset and/or date of diagnosis of each reported case. Furthermore, there is no doubt that at the outset notification forms were submitted for a substantial number of old cases diagnosed in previous years. These limitations are to be kept prominently in mind in reviewing the figures which are presented.

Volume of Reported Cases by Area

During the period November 18th, 1946, to December 31st, 1947, a total of 388 cases of cancer or suspected cancer were reported. The distribution of these cases by place of residence is set out in Table I. The number of recorded cancer deaths during the preceding calendar year and the ratio of reported cases to recorded deaths of residents of the area covered are also indicated.

TABLE I
SOURCE OF REPORTED CASES OF CANCER*
November 18, 1946, to December 31, 1947

DISTRICT	REPORTED CASES			Cancer Deaths 1946	Ratio of Cases to Deaths
	Male	Female	Total		
Cochrane.....	49	50	99	67	1.48
Kenora.....	9	4	13	33	0.39
Nipissing.....	-	2	2	36	0.06
Rainy River.....	-	1	1	18	0.06
Sudbury.....	27	13	40	64	0.63
Thunder Bay.....	135	68	203	103	1.97
Timiskaming.....	9	21	30	40	0.75
TOTAL.....	229	159	388	361	1.07

*Includes cancer and "suspected" cancer.

The District of Thunder Bay contributed 203 or 52.3 per cent of the 388 cases reported. Fort William and Port Arthur alone contributed 154 cases. The ratios of reported cases to the recorded deaths during the preceding calendar year are of interest. The observed differences between the ratios for the several districts shown are due largely to differences in completeness of reporting, *not* to real differences in cancer incidence or prevalence. It is significant that the number of reported cases among males should substantially exceed the number for females.

The number of recorded deaths from cancer by site and by place of residence are given in Table II.

TABLE II
RECORDED DEATHS FROM CANCER VS. REPORTED CASES
CERTAIN DISTRICTS OF NORTHERN ONTARIO

SITE OF DISEASE	Cochrane	Kenora	Nipissing	Rainy River	Sudbury	Thunder Bay	Timiskaming	Total Recorded Cancer Deaths 1946	Total Reported Cases 1947	Ratio of Cases to Deaths
Oral cavity	4	2	-	1	-	2	-	9	41	4.6
Stomach	17	8	8	4	11	29	8	85	44	0.5
Intestines	4	8	6	2	9	15	3	47	22	0.5
Rectum	3	1	1	-	4	6	1	16	14	0.9
Other digest. system	6	2	3	2	10	12	8	43	14	0.3
Larynx	-	1	-	-	2	-	1	4	2	0.5
Lung and mediast.	2	1	5	1	2	9	4	24	7	0.3
Uterus	5	4	5	1	8	7	3	33	43	1.3
Other fem. gen. org.	2	-	-	-	1	1	1	5	10	2.0
Male genital organs	5	4	1	1	4	3	1	19	29	1.5
Breast	6	1	1	-	4	8	4	24	45	1.9
Urinary organs	6	-	1	1	5	5	2	20	51	2.6
Skin	-	-	1	2	1	-	-	4	31	7.8
Brain	1	-	-	1	1	1	-	4	4	1.0
Other sites	6	1	4	2	2	5	4	24	31	1.3
TOTAL	67	33	36	18	64	103	40	361	388	1.07
Mean for 1944-46 . . .	57	30	35	17	63	99	44	345	-	-

These figures, in comparison with those in Table I, show that while reporting is, on the whole, quite encouraging, it is still deficient for the "inaccessible" sites. The latter cases are in many instances not diagnosed until the terminal illness intervenes.

Reported Cases by Site, Age and Sex

The distribution of the 388 reported cases by site, age, and sex, is presented in Table III. Of the 388 cases reported 229 or 59.0 per cent were males, and 159 or 41.0 per cent were females.

TABLE III
REPORTED CASES OF CANCER BY SITE OF DISEASE AND AGE GROUP

PER CENT.....	8.7	10.3	25.5	17.0	19.1	6.5	59.0	41.0	100.0

*Includes: Hodgkin's disease, 4; leukaemia, 4; bone, 9; metastases, 7; thyroid, 2; others, 5.

†Include cases (23 males and 28 females) for whom ages were not recorded.

Of the 388 cases reported, 74 or 19.0 per cent were under age 45, and 99 or 25.6 per cent were 65 years of age or over. Of the 159 female cases, 106 or 66.7 per cent were under 65 years of age. Only 5 cases were reported among persons under the age of 20 years.

For both sexes combined, the principal site groups involved were: digestive system (94), genital organs (82), urinary organs (51), breast (45), and oral cavity (41). Among males the sites of leading importance were: digestive system (71), genito-urinary organs (71), and oral cavity (36). In females, the principal sites were: genital organs (53), breast (44), and digestive system (23).

Stage of Disease—Type of Case—Confirmation of Diagnosis

Stage of disease is required to be designated on the Notification Form as "early", "moderately advanced", and "far advanced". Provision is also made for indicating whether the patient is a "new case" or a "recurrence", and whether treatment has already been undertaken.

Of the 388 cases reported, 179 had had some previous contact with a physician either for diagnosis or treatment and 235 were already "under treatment".

Only 209 cases or 53.9 per cent of the total cases reported were new cases in the sense of first contact with a physician either for diagnosis or treatment. Thirty-seven of the cases reported were recurrences after previous treatment elsewhere. It is important to recognize the fact that total cases reported do not reflect the incidence of cancer in an area. Only new cases can throw any light on this point, and then only if case reporting is essentially complete.

The recorded data on stage of disease for the 209 "new cases" reported are presented in Table IV.

TABLE IV
NEW REPORTED CASES OF CANCER BY SITE OF DISEASE AND STAGE

SITE OF DISEASE	STAGE OF DISEASE						TOTAL†		
	Early		Mod. Adv.		Far Adv.		M	F	T
	M	F	M	F	M	F			
Oral cavity.....	17	1	4	2	—	—	22	3	25
Stomach.....	3	—	10	3	10	1	24	4	28
Intestines.....	—	1	4	—	3	—	7	1	8

Other digestive tract.....	1	—	3	—	2	4	6	4	10
Larynx.....	—	—	1	—	—	—	1	—	1
Lung and mediastinum.....	1	—	2	1	—	—	3	1	4
Uterus.....	—	9	—	10	—	6	—	26	26
Other fem. gen. org.....	—	1	—	3	—	2	—	6	6
Male genital organs.....	4	—	3	—	5	—	12	—	12
Breast.....	1	3	—	13	—	7	1	25	26
Urinary organs.....	3	2	3	2	3	1	9	5	14
Skin.....	12	6	2	1	—	—	14	7	21
Brain.....	—	—	—	—	—	—	—	—	—
Other sites.....	2	2	4	5	3	—	10	7	17
TOTAL.....	46	25	37	41	29	25	115	94	209

†Includes cases (3 males and 3 females) for whom stage was not recorded.

Of the 209 new cases, 71 cases or 34.0 per cent were classified as "early"; 78 cases or 37.3 per cent as "moderately advanced" and 54 cases or 25.8 per cent as "far advanced". In 6 cases the "stage" was not recorded. Of the female cases (94), only 25 or 26.7 per cent were recorded as "early"!

In cancer of the "accessible" sites (buccal cavity, uterus, breast and skin), it is noted that 72.0 per cent of the buccal cavity cases and 85.7 per cent of the skin cases were classified as "early", compared with *only 34.6 per cent of the uterus cases*, and *only 15.4 per cent of the breast cases*. Of the "far advanced" cases, 7 were rectum, 6 were uterus, 7 were breast.

Confirmation of Diagnosis

Of the total 388 cases reported, 238 or 61.3 per cent were recorded as confirmed by biopsy. There was less variation among the several sites than might be expected. Of 31 skin cases, 65 per cent had been confirmed by biopsy compared with 53 per cent for the digestive system, 53 per cent for oral cavity, 65 per cent for breast and 76 per cent for genital organs. In 71 cases, or 18.3 per cent, biopsy reports were not available.

General Comment

The figures presented in this Review afford some idea of the cancer diagnosis and treatment requirements of the areas concerned. The data seem to suggest

that the needs may not be as great as at first supposed. The morbidity data are incomplete, of course, and to what degree we do not yet know. Death statistics are possibly still the most useful guide, supplemented by reporting for the accessible sites.

This Review has served to indicate that there is some need for revision of the reporting form and for the addition of information regarding date of onset and/or date of diagnosis. With such modifications, better use could be made of the case reports in terms of assessing the incidence of cancer (i.e., the number of new diagnosed and reported cases in a given period) and it would be possible to more accurately reflect the extent to which there is delay in seeking treatment.

EIGHTIETH ANNUAL REPORT

of the

HOSPITALS DIVISION
DEPARTMENT OF HEALTH

upon the

Ontario Hospitals for the Mentally Ill, Mentally Defective, Epileptic and Habitué Patients

of the

PROVINCE OF ONTARIO

FOR THE YEAR ENDING MARCH 31st, 1947

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

ONTARIO

TORONTO

Printed and Published by Baptist Johnston, Printer to the King's Most Excellent Majesty,
1948

TO THE HONOURABLE RAY LAWSON, O.B.E.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Eightieth Annual Report of the Hospitals Division, Department of Health, relating to the Ontario Hospitals for the Mentally Ill, Mentally Defective, Epileptic and Habituate Patients, for the year ending March 31, 1947.

Respectfully submitted,

RUSSELL T. KELLEY,

Minister of Health.

THE HONOURABLE RUSSELL T. KELLEY,
Minister, Department of Health,
Parliament Buildings,
Toronto, Ontario.

Sir:

I have the honour to submit for your approval the Eightieth Annual Report of the Hospitals Division, Department of Health, relating to the Ontario Hospitals for the Mentally Ill, Mentally Defective, Epileptic and Habituate Patients, for the year ending March 31, 1947.

Respectfully submitted,

J. T. PHAIR, M.B., D.P.H.,

Deputy Minister of Health.

ONTARIO HOSPITAL, BROCKVILLE

DR. C. E. HANNA, Superintendent

Care and Treatment of Patients

The general physical health of our patients has continued favourable. A fully-staffed male service has assured a resumption of a much more active and supervised physical and recreational program. All male patients, except the acutely ill and infirm, have been engaged to a greater or lesser extent in these activities, which have included physical therapy (gymnastics), under a qualified attendant with army experience in this field. Such games and recreations as softball, volleyball, football, badminton, tennis, lawn bowling, curling and croquet have been enjoyed by the more active types, while medicine ball practice and walking parties (80 to 100 patients) have been instituted for the less active group. The shortage of nurses and aides has limited to some extent the opportunities for female patients to take full advantage of recreational facilities, although some who require less supervision, have taken part in lawn bowling, curling, croquet, etc.

The addition of a second electro-shock unit has greatly increased the facilities and extended the field of this form of therapy and has been the only type of convulsive therapy practised during the year, mainly because of lack of sufficient nursing personnel, to give adequate care to insulin-treated cases.

The Mental Health Clinic has had the heaviest load in its history and the public demand and appreciation of its services has shown a remarkable increase. The return of our social worker to this department following war service in September 1946, rejuvenated the whole unit and restored the very excellent pre-war contacts with our probation cases, as well as the bi-monthly visits to patients in boarding homes.

A number of new boarding-out homes have been approved and the number of patients placed in these homes has been doubled during the past year (at present there are 74 patients so placed).

There has been an increase in the total admissions over the previous fiscal year of some 93 patients, yet the resident population shows a decrease of some 62 patients. This favourable general picture may be accounted for by the transfer of 50 male patients to St. Thomas in April 1946, the expansion of our boarding-out accommodation, and increased death rate incident to the large number of admissions in the aged group.

Staff, Administration and Buildings

Although we are well into the second year following the end of hostilities, the major problems of the war years continue to delay progress. Overcrowding, shortages of nursing staff and scarcity of materials are still with us. Despite these adversities, some progress has taken place that heralds things to come. Circumstances have vetoed the possibility of much needed expansion and new construction and ordinary maintenance has of necessity been reduced to a minimum. However, some improvement of a face-lifting nature has been accomplished. A painting and decorating program has been completed during the past fiscal year.

A new system of grounds lighting has been undertaken and presently extends from the administration building to the western entrance of the hospital property.

The following staff changes affecting senior officers and heads of hospital departments have taken place during the year:

Dr. E. J. Rosen was appointed Physician, Gr. 2, on May 16, 1946, on discharge from the army, replacing Dr. A. G. Allen, who was transferred to the Ontario Hospital, Woodstock. In September, 1946, Dr. Rosen was posted to the Psychiatric Hospital, Toronto, for a year's course of instruction.

Dr. F. K. Switzer (Dentist), was transferred to this hospital from the Dental Car Service on June 3, 1946, replacing Dr. Wm. C. McLachlan, who resigned to resume general practice. Dr. Switzer resigned December 31, 1946, to open private practice in Chapleau, Ontario. Dr. H. S. Lankin was appointed March 17, 1947, to replace Dr. Switzer.

Dr. A. K. Bochner returned from enlistment and was transferred to this hospital on June 3, 1946, replacing Dr. M. G. Rendall as Director of the Mental Health Clinic.

Dr. N. L. Walker returned from enlistment and was transferred to this hospital from the Ontario Hospital School, Orillia, effective July 1, 1946.

Dr. Charles C. Schutt was appointed January 2, 1947, replacing Dr. Isabella Ralph

Miss P. Parisien, Social Service Worker, returned from enlistment on September 30, 1946.

Miss Natalie Berry was appointed as Occupational Therapist, Gr. 1, on July 1, 1946, and Miss M. E. Webber was appointed Occupational Therapist, Gr. 1, on November 13, 1946, these two remaining on our staff on the completion of their internship.

Mr. L. W. Barnes returned from enlistment on June 15, 1946, and assumed duty as Storekeeper, Gr. 2.

Mr. E. A. Clamp, Chief Engineer, was transferred to the Ontario Hospital, Cobourg, and was replaced by Mr. Walter Fairbrother, October 1, 1946. Subsequently, Mr. Fairbrother was transferred to the Ontario Hospital, Woodstock, and Mr. M. Jarvie from the Ontario Hospital, Woodstock, came here as chief engineer, effective November 1, 1946.

Mr. James Conning was transferred to this hospital as Laundry Supervisor from the Ontario Hospital, Woodstock, January 6, 1947.

Miss Margaret Moriarity, Reg. N., Nurse-Instructress, resigned July 7, 1946, to be married, and was replaced by Mrs. Edythe Wilkins, Reg. N.

Two valued and long associated members of our attendant staff were superannuated as of March 31, 1947, having reached superannuation age. These were Mr. Thomas Mott and Mr. Thomas Griffiths.

Our attendant staff has now reached its full quota, but unfortunately, the nursing service is severely handicapped by a progressive depletion of its members. There is a shortage of thirty nurses at the present time in this department. The Training School for Nurses, I regret to report, is also at the lowest ebb in its history. This school in pre-war years graduated classes of more than twenty nurses. Our present enrolment consists of five students in the junior year, two students in the intermediate year, and five students graduating. However, the prospects for 1947 appear much better. We already have applications from fifteen students who are acceptable providing they pass matriculation examinations in June to meet the required standard. We are hopeful of increasing this number considerably before the opening of the fall term.

A very successful course of instruction was given during the past fiscal year to all newly appointed attendants and ward-aides, and many of our older staff members have availed themselves of this opportunity for a refresher course. Written and oral examinations were conducted at the completion of the course.

ONTARIO HOSPITAL, COBOURG

DR. G. W. KELLS, Superintendent

Care and Treatment of Patients

Twenty-eight patients were admitted during the year, 39 were discharged, 15 were transferred here from other Ontario Hospitals, and 11 were transferred to other Ontario Hospitals. One hundred and fifty-two were allowed out on probation, and 114 were returned. Eleven patients died.

Religious services were held in the auditorium every Sunday during the year, by the Protestant and Roman Catholic Clergy of Cobourg. Some members of the Clergy conducted services during the week at the hospital, and some of our girls attended special communion services in the Cobourg churches, under special arrangement.

Moving pictures were presented each week during the winter months, and during the remainder of the year, a group of about 50 girls were allowed to attend picture shows in Cobourg, Saturday afternoons.

The annual Hallowe'en Party was held in the auditorium. A field day was held in September and was much enjoyed. A concert was held during Christmas week and a Christmas tree on December 23rd. A concert was given for St. Patrick's Day by a group of local amateurs, in the auditorium.

The Mental Health Clinic functioned by appointment in the various communities in the counties of Northumberland, Durham, Peterborough, Victoria, and Ontario.

Staff, Administration and Buildings

The work of the engineer's and carpenter's departments, as that of our painter, has practically all been maintenance. These services have been well maintained.

Mr. Charles F. Gee, Chief Engineer, was transferred to the Ontario Hospital, St. Thomas, on October 15, 1946. Mr. Edward Clamp was taken on the staff as Chief Engineer, on a transfer from the Ontario Hospital, Brockville.

Mr. Kenneth M. Pack resigned from the staff as Bursar on January 31, 1947, having accepted a position in the Department of Veterans Affairs, Ottawa.

Mr. Edmond J. Downey joined out staff as Bursar on January 28, 1947, on a transfer from the Ontario Hospital School, Orillia.

Miss Inez Davis, Psychologist, was transferred June 1, 1946, to the Ontario Hospital School, Orillia.

ONTARIO HOSPITAL, FORT WILLIAM

DR. C. A. CLELAND, Superintendent

Care and Treatment of Patients

During the year a total of 94 patients was admitted, and discharges and deaths totalled 63. There are 127 patients in residence. Forty new admissions received electro-shock therapy. Our Port Arthur Unit with a total of 45 beds is used for the group of senile and chronic continuous treatment patients, and this has been a great advantage both to patients and staff.

Our moving picture machine has been used at both units, has added considerably to our recreational facilities, and is appreciated very much by our patients. Fifty books have been added to our library.

Church services have been provided regularly by the Baptist Young People's Organization of Fort William, and the Salvation Army with their band has visited on special occasions. These services are greatly appreciated.

The consultation work in this district continues to be quite heavy, and we are asked to see practically every patient coming from the Lakehead prior to his admission to hospital. We are also at times able to assist in the care of female patients before they are admitted to Ontario Hospitals in the east.

Staff, Administration and Buildings

Mrs. McGrath, Reg. N., resigned in September to move to Vancouver. Miss B. Knowles, Reg. N., was with us for two months, but left to take a position in Kingston. Our attendant staff turn-over is still quite high mainly because of the distance of the hospital from the city and transportation difficulties. The senior members of staff are to be commended for their extra efforts in maintaining the necessary services.

There has been no new construction during the past year. Our laundry has been enlarged, and a heat circulator added which has increased its efficiency. Our water supply has again been our chief worry. Our farm program has continued as usual with a carload of beef shipped to the eastern hospitals in the fall.

A course of lectures in psychiatry and mental hygiene has been given to the nurses-in-training as part of their regular training course at the 3 general hospitals—McKellar Hospital, Fort William, St. Joseph's Hospital, Port Arthur, and the General Hospital of Port Arthur. Talks on mental hygiene and related topics have been given to the Registered Nurses' Association, the Public School Teachers' Association, the Professional Social Workers' Association, and 5 Young Peoples' Church Associations. Orientation lectures have been given to the attendant staff.

ONTARIO HOSPITAL, HAMILTON

DR. J. N. SENN, Superintendent

Care and Treatment of Patients

All of our staff, with one exception, have now returned from active service. This member of staff is still in the United Kingdom on duty, and his discharge is being delayed on account of the nature of the work that he is performing.

The return of our experienced staff has reacted beneficially in the care and treatment being given to patients. This, of course, affects particularly the male side. Treatment on the female side is very badly hampered by lack of staff, which we seem unable to obtain. This applies particularly to ward staff, both in the field of registered nurses and nurses' aides. New applicants for attendants are of good quality, and this is showing itself in the general morale of the whole male nursing service.

I would like to pay tribute to married members of the female nursing and nurses' aide staff who are rendering invaluable assistance under particularly trying circumstances.

We have been able, during the past year, to reduce our population somewhat by transfer of both male and female patients to the St. Thomas Hospital. During the last year, also, three counties have been transferred from our admitting list to other hospitals, namely, Norfolk to St. Thomas, Waterloo and Grey to London. This has resulted in our admission list falling off somewhat, although we must still be considered as an extremely active admitting hospital.

All wards are, of course, overcrowded, but not to the extent that they were previously and as a result better treatment can be carried out.

We have noticed particularly in the field of admissions, the increase in number of elderly patients being admitted, and the fact also that our average age at death has increased very markedly in the last few years. Electro-shock treatment is being carried out, also Narco diagnosis and treatment, together with an increasing treatment facility by means of occupational therapy and other types. We have had during the last year two additional occupational therapists entering our staff for work particularly in the shock treatment units.

Staff, Administration and Buildings

On August 31, 1946, Dr. J. D. Atcheson was transferred from this hospital to the Toronto Psychiatric Hospital for his course there. Additions to our medical staff include Dr. J. D. Grieve on October 14, 1946, on his discharge from the active forces. Dr. W. H. Weber, transferred to this hospital on October 1, 1946, having completed his course at the Toronto Psychiatric Hospital, and Dr. B. A. Boyd on October 7, 1946, and Dr. K. W. Runnalls on August 15, 1946, both entering the service from the army. Miss Helen Bush, on October 1, 1946, and Miss Pauline Gilliland, on October 14, 1946, were transferred to our occupational therapy staff.

We have lost several of our valuable employees through death, and Harvey Hull Mason, was superannuated on September 25, 1946, on account of ill health.

I would like to commend particularly the staff of physicians for their devotion to their duty, and for their painstaking effort in the care and treatment of patients.

ONTARIO HOSPITAL, KINGSTON

DR. J. S. STEWART, Superintendent

Care and Treatment of Patients

No radical change has been made in the care and treatment of patients during the past year. Electro-shock therapy has been actively utilized. It is hoped, as soon as nursing staff and physical accommodation is available, to have a unit for the use of insulin shock therapy in addition to electro-shock treatment, but there appears to be no prospect of commencing insulin shock therapy in the near future.

We still have a great shortage of nurses, and are only able to carry on with the aid of ward-aides and part-time nursing help.

Staff, Administration and Buildings

Dr. Grant C. Beacock joined the staff in May 1946, and Dr. P. P. Mandl resigned in September 1946. Miss Marion Crawford, Superintendent of Nurses on leave of absence for military duty, was released from the army in 1946, but having married in the meantime resigned from her appointment as Superintendent of Nurses at this hospital. Miss Ella G. Smith, Acting Superintendent of Nurses during the war years, was appointed as Superintendent of Nurses.

Mrs. Edith Alexander, Nurse Instructress, was transferred to the Ontario Hospital, London, and in exchange Miss Bessie Jones, of the Ontario Hospital, London, joined the staff of this hospital as Nurse Instructress.

Our present hospital accommodation continues to be greatly over-taxed, and the demand for admission of senile and arteriosclerotic patients continues to be one of our major problems. It is hoped, however, that Pavilion One of the Mowat Division, which has been closed for the past year for repairs, will soon be ready for occupancy again, and will relieve the pressure on the male division until such time as the buildings may be replaced by more suitable accommodation.

ONTARIO HOSPITAL, LANGSTAFF

DR. W. A. REDDICK, Superintendent

Care and Treatment of Patients

The Concord Unit again has been placed under the administration of the Langstaff Hospital, female patients from the Ontario Hospital, Toronto, who were being taken care of in this unit, were transferred to other Ontario Hospitals, and 90 patients from the Ontario Hospital, Langstaff, placed in residence at this unit. During the past fiscal year, 78 patients were transferred to this institution, 5 were discharged, one discharged from elopement, 6 died, and 26 were transferred to other Ontario Hospitals.

Our chief therapy, as formerly, consisted of work on farm parties. A small infirmary of eight beds was organized in a large side room which centralizes our acute sick cases where they can be given special nursing attention. Throughout the fall and winter months, movies were shown once each week, all church services were held regularly, and a field day was enjoyed by both the patients and the staff with their families on August 15th. A new undertaking this year was the establishment of a library in a large well heated, airy room in one of our basements, and in this the patients are supplied with a large assortment of books, most of the current magazines, and different types of indoor games.

Staff, Administration and Buildings

There has been very little change in personnel this year, with the exception of a few members being transferred to the Ontario Hospital, St. Thomas.

This winter was exceptionally severe and the staff are to be complimented on their regular attendance.

There were no major building operations undertaken during the year, but the interior of several buildings were painted. Farm and garden operations proceeded in a favourable manner.

ONTARIO HOSPITAL, LONDON

DR. G. H. STEVENSON, Superintendent

Care and Treatment of Patients

During the year there were admitted for the first time 138 men and 184 women, and as readmissions 42 men and 64 women, a total of 428 persons. The Ontario Hospital at St. Thomas accepted by transfer 41 men and 2 women, and in addition, is now admitting directly all patients from Elgin, Kent, Essex and Lambton, counties formerly served by this hospital. To relieve the situation at the Ontario Hospital, Hamilton, the department arranged that patients from Grey County and Waterloo County, formerly admitted

to the Ontario Hospital at Hamilton, be admitted to this hospital. Our population at the end of the year is still 1,494, indicating a degree of over crowding that still needs to be remedied.

Patients discharged during the year were 130 men and 136 women, a total of 266, and a discharge rate, based on admissions, of 62%.

There were 182 deaths, 76 men and 106 women. The old age group of admissions is still our most serious administrative problem, and it is again urged that some other arrangements be made for the care of elderly people who so frequently show various degrees of mental enfeeblement.

Our treatment facilities have been fully used during the year, in spite of staff shortages. The electrotherapy department was transferred from Ward 9, so that Wards 11 and 13 constitute an electroshock and insulin therapy service for women patients, and a part of Ward 4 for men patients. Dr. J. J. Geoghegan continues in charge of this service, assisted by Dr. Kenyon and Dr. Davis. Dr. Geoghegan published a fine report of the work of this service in the January 1947 number of the Canadian Medical Association Journal. We are indebted to Dr. C. C. Burlingame, President of the Institute of Living, for the generous gift of a new type of electrotherapy equipment, devised by Dr. Liberson, which is being used to good advantage. In connection with the Psychology Department of the University of Western Ontario, special psychological studies are being made of patients treated with different types of equipment.

While electrotherapy is given more prominence than other therapies at this time, we endeavour to keep in mind that it is only one therapy, and that all staff and all our therapies combine for the welfare of the patient. Psychotherapy, the nursing service, occupational and recreational therapy, dietetics, surgery, dentistry, gynaecology, ophthalmology and otolaryngology, medicines, arsenicals are all used for their respective values.

Staff, Administration and Buildings

In this, the first full year after the cessation of hostilities, the hospital has been returning to a peacetime basis. Practically all of our male staff, who enlisted, have returned to duty, and we are happy to have them with us again. Salaries have been revised upwards, but there are still acute shortages which interfere with the efficient functioning of the hospital, shortages in textiles, equipment, and particularly in nursing staff. There has been a steady reduction in the number of graduate and student nurses, and we have not been able to secure sufficient ward-aides for our needs. It has been increasingly necessary to use men attendants for certain duties in the women's division, such as the special clinics, ward cleaning, escort duties, etc.

There has been no material change in the School of Nursing during the year. A few more students are entering the School of Nursing and the affiliate groups continue. The graduation exercises were held on the evening of May 17, 1946, with Dr. G. E. Hall, Dean of the School of Medicine and President-designate, as the guest speaker.

The training of attendants and ward-aides has been put on a more definite basis this year.

No major changes structurally have been made during the year, but it is hoped that funds may be provided during the coming year for the modernization of those sections of the hospital most urgently in need of it. The usual painting and minor repairs have been done.

The kitchen in the Examination Building was closed during the year to permit its conversion into a suite of rooms for the admission of patients. We hope to complete this work shortly. A light delivery panel truck was purchased and is used for the delivery of food from the main kitchen to all other buildings.

A beauty parlor is being set up in the Recreation Building, the equipment being purchased from the canteen profits, and this should be available shortly.

As the year ends, we are disposing of all our hogs and closing our piggery.

The clinical laboratory has been modernized and equipped with better apparatus. A technician has been appointed.

An additional social worker, Miss Kellerman, was appointed to give her full time to aftercare. It is our opinion that the most needed improvement in treatment is more adequate aftercare. It is hoped additional social workers and public health nurses can be appointed during the coming year.

The Mental Health Clinic has been able to increase its activities, and its staff now consists of Dr. G. E. Jenkins, Miss June Cumberland, Psychologist, and Miss Rita Lindenfield, Social Worker.

On September 1, 1946, Mr. Humphrey Marshall, a member of our staff for 40 years, and Chief Supervisor for many years, superannuated. He has been succeeded by Mr. Arthur Davies, and Mr. Archie Wright has been appointed Assistant Chief Supervisor.

In closing, I should like to thank the managers of Loews Theatre and the Capitol Theatre for generous permission to take a group of 50 patients once a week to these theatres without charge. Our thanks are also due to many others who have sent books and magazines, or who have entertained the patients in other ways.

ONTARIO HOSPITAL, NEW TORONTO

DR. T. D. CUMBERLAND, Superintendent

Care and Treatment of Patients

Owing to the shortage of staff, it has been very difficult to care for the patients. The out-door exercises have been curtailed because there is not sufficient staff to take charge of the patients outside the wards. The treatment of patients by electric and insulin shock could be extended if we had sufficient staff to do so.

Staff, Administration and Buildings

The staff situation has improved a little amongst the attendants during the past year. A number who enlisted returned to their former positions at this hospital. There is a great shortage in the nursing staff, this applies to graduate nurses and ward-aides. A considerable percentage of the nurses are married women who are living in this district.

The necessary repairs to buildings were carried out during the year. There is no new construction.

ONTARIO HOSPITAL SCHOOL, ORILLIA

DR. S. J. W. HORNE, Superintendent

Care and Treatment of Patients

This year showed an increase in the number of patients admitted, and the average daily population for the year was 2,372.

Lack of accommodation is still acute; this in spite of the 300-bed addition. There is a steady increase in applications, particularly for infants.

The health of the patients was good. There were no epidemics and very little physical illness during the year.

In spite of the overcrowding, particularly in the winter months, I feel that the patients of this institution received excellent care, adequate training and recreation. There are still many improvements that can and will be made when facilities and additional staff are available.

Staff, Administration and Buildings

The training programme was carried on with a better organized and more varied programme. In this respect, we feel that we have been of some assistance to other institutions of this type in the Dominion, as during the year we had four teachers from the school in British Columbia, each of whom spent three months observing and obtaining instruction. In addition, we had the Superintendent of Nurses from the Weyburn School in Saskatchewan who spent two weeks with us obtaining instruction.

The University Classes in Occupational Therapy, Psychology, and Social Service were given clinics.

The staff is being brought up to pre-war status. Dr. C. V. Tisdale was transferred from Woodstock on March 15, 1946, as Clinical Director. Dr. W. G. Watts was appointed on June 1, 1946, Dr. M. L. Baragar on September 9, 1946, and Dr. C. C. Bracken on March 7, 1947. In addition to the medical staff, our male staff was brought up to standard, but there is still a lack of ward-aides and graduate nurses.

During the year the following members were honoured by the Quarter Century Club and presented with Quarter Century buttons: Miss M. West, Miss M. Thomson, Miss M. Chadwick, Mr. H. Allison, Mr. J. White, Mr. Geo. Smith, Mr. K. Cunningham, Mr. D. T. S. Thomson, Mr. J. E. Duncan, Mr. P. Leeking, and Mr. J. Gidman.

There was a concentrated effort put on repairs to the buildings both by the Department of Public Works and our own maintenance staff. The major project was transferring the Terrace Residence into an office section. The basement is used for Dispensary and drug store room. The first floor provides three offices, and the second and third floors were renovated to make two apartments for medical staff. Other work was done on roofs, eavestroughing, etc.

I would also like to add that we have received the utmost cooperation and assistance from the various offices in the Department of Health, and wish to express our thanks and appreciation to them at this time.

ONTARIO HOSPITAL, PENETANGUISHENE

DR. C. S. TENNANT, Superintendent

Care and Treatment of Patients

An Electro-shock Unit was recently provided, and it is expected that patients will benefit considerably by the use of this form of treatment.

A careful and thorough investigation of all patients in the Criminal Insane Unit has been almost completed, with all cases being considered in conference of the medical staff.

The number of male patients employed both inside and outside has been increased, especially at the unit for the criminally insane, and the benefits of such a program are very apparent to all.

The number of patients in approved homes is somewhat less than it was a year ago, chiefly because suitable patients are not available in the hospital to replace those who have had to be returned from approved homes.

The number of patients on probation shows an increase.

The number of patients in residence shows a small decrease, although the total number of patients admitted remains the same as for the previous fiscal year.

Staff, Administration and Buildings

We have found that the new attendants engaged, all veterans, have greatly improved our staff. Resignations amongst our registered nurses have increased, and we have not been able to replace them except with ward-aides. This situation will prove very serious if resignations continue and replacements are not made with nurses equally qualified as soon as possible.

A new electric range was provided at the unit for the criminally insane which has enabled us to establish a proper kitchen where all cooking for that unit can be done with the exception of the baking. The steam table was moved to the patients' dining room, and a cafeteria system has proved very successful. Patients are provided with better and hotter meals.

A canteen was established and this has proved very popular. As profits accrue both patients and staff will stand to benefit in different ways.

Dr. E. Aeberli, Assistant Physician, resigned on March 31, 1946.

Dr. W. Harvey Clare reported for duty as Assistant Physician on April 1, 1946.

Dr. W. H. Gauld reported for duty as Senior Clinical Specialist on April 15, 1946.

Mr. Lorne Livingstone, Chief Male Supervisor, was superannuated as from August 13, 1946. He was succeeded by Mr. Robert Trustham, who was been on the staff for many years, latterly as Supervisor and X-ray Technician.

Mr. Robert Trott was appointed Chief Male Supervisor at the Criminal Insane Unit, replacing Mr. Robert MacAulay.

Miss Mary MacMillan, Occupational Therapist, was superannuated as from October 31, 1946.

Mr. Fred Gowland, Baker, was superannuated on account of ill health, November 1946.

A course of training including the St. John Ambulance Course has been given to fifteen members of the male attendant staff. These men gave evidence of being very keen on improving their qualifications by such a course of instruction.

The Superintendent read a paper before the members of the Ontario Neuropsychiatric Association, and addressed members of service clubs both in Midland and Penetanguishene.

ONTARIO HOSPITAL, ST. THOMAS

DR. D. O. LYNCH, Superintendent

Care and Treatment of Patients

This, the first complete report since the re-opening of the hospital, is of interest in that it represents the entire re-organization and the building up of staff and therapy facilities necessary for the efficient operation of an active treatment centre. In this south-western corner of the Province, the hospital is now serving a useful purpose, and our admission rate, small at first but rapidly increasing, indicates the need for such community facilities.

At the beginning of the fiscal year, there were 383 patients in residence. On March 31, 1947, there were 1,053; first and readmissions accounted for 227, while transfers received amounted to 603, a total of 830 patients. In all, 1,214 patients were treated during the year, those discharged amounting to 62 while 52 are still on probation and there were 21 deaths. Twenty-one per cent of all admissions were over 60 years of age.

Transfers were received from the following hospitals:

Ontario Hospital, Toronto	— 147 patients
Ontario Hospital, New Toronto	— 131 patients
Ontario Hospital, London	— 43 patients
Ontario Hospital, Brockville	— 61 patients
Ontario Hospital, Kingston	— 60 patients
Ontario Hospital, Hamilton	— 132 patients
Ontario Hospital, Langstaff	— 16 patients
Ontario Hospital, Woodstock	— 8 patients
Ontario Hospital, Cobourg	— 4 patients
Ontario Hospital, Whitby	— 1 patient
Grand Total.....	603 patients

On January 1, 1947, female admissions were accepted from Essex County and at the close of the year, Lambton County was added to our admitting district. We are now accepting all patients from Norfolk, Elgin, Kent, Essex and Lambton Counties. At this date, the average monthly admission rate is 35.

With the increasing number of admissions and transfers, the female reception unit was opened on November 18, 1946, and the male infirmary on October 28, 1946. Pavilion 6 was also opened on November 20, 1946. Pavilion 5 and the female infirmary were re-opened early this month.

Hydrotherapy: These units are functioning satisfactorily in both male and female reception centres. Six continuous bath tubs are in use eight to ten hours daily and when the upper floors of the reception units are occupied, six more tubs will be available for treatment procedures. Hydrotherapy in the form of wet sheet packs is also utilized in both reception units and in pavilion 2-A where a number of more disturbed patients are domiciled.

There are no continuous bath tubs in the pavilions and patients requiring this form of therapy must be transferred to the reception units.

Electroshock Therapy: Since the opening of this unit a little over a year ago, 102 patients have been so treated, 66.2% recovering sufficiently to leave hospital. Our best results continue with the agitated depressions although a number of manic and schizophrenic patients have shown satisfactory response to treatment. A few selected patients have been given insulin at sub-coma dosage with improved physical results.

Occupational Therapy: On September 3rd, Miss Eileen Rider took over the duties of Occupational Therapist and shortly after was joined by Miss Jeanne Porter to organize and develop this important therapeutic work. Miss Bernice Flaherty, formerly of the C.W.A.C. and attached to Crumlin Military Hospital as Occupational Therapy Assistant, was added to the staff. Ideal work rooms and shops were soon located in Hut 13, a former R.C.A.F. temporary building, and at present the set-up provides for the various crafts in bright cheerful surroundings.

The male patients have their work room which is fitted for carpentry, hobbies and handicrafts with a finishing room adjoining. In the neighbourhood of 80 patients attend classes daily and one therapist is enabled to visit reception buildings and pavilions and encourage therapeutic effort among the "shut-ins". Card parties, entertainments and ward parties have been carried out throughout the winter, usually of an evening and provide much enjoyment and diversion for small groups. Ward picnics in the form of lawn suppers, which were started last summer, were continued under the supervision of the Therapy Department until late fall and proved very popular. These will be carried on again this summer.

Another extension of occupational therapy service is the library. A basement room under the female reception ward, decorated in bright colours, was selected. Comfortable furniture, floor lamps and a radio have been added. The patients obtain books on weekdays, and on Sundays privileged male patients make use of the room as a lounge. Its popularity is evident, and it will undoubtedly be utilized to a greater extent during the winter months. The supervision of this department under the Occupational Therapy Assistant is not difficult. An added feature of the library is a book cart made from a discarded tray truck, and which the engineer rebuilt to carry books and periodicals. A travelling library is thus provided, and newly admitted patients are assured of reading material within a few days of their entry to hospital.

Recreational Therapy: Large numbers of transfers, mostly chronic deteriorated patients, were observed with little to occupy their time during winter months, and this prompted the development of organized recreation. Started several months ago, four classes of male patients were selected for one hour's P.T. daily. Well over 100 patients have received the benefits of calisthenics, and later organized group activities such as volleyball, indoor hockey, etc., and as a result we have been able to recruit many patients formerly considered "bench warmers" for the occupational group employed on farm and garden. The equipment necessary to establish these classes has been relatively inexpensive, and perhaps the most enthusiastic participant is the recreational instructor, Mr. W. Capern. Mr. Capern was previously in charge of organized recreation with the R.C.A.F. in England, and is well qualified for his duties.

Other patients' recreational activities developed during the fall and winter months, and usually held weekly in the Amusement Hall, have been: dances, card parties, band concerts, a variety show, motion pictures, and bingos. Movies and dances are still the most popular.

In connection with patients' activities, it may be of interest to note the enthusiasm by both patients and staff when the canteen was opened recently. This is located in the Recreation Hall, and is under the management of Mr. Albert Noviss of the attendant staff. The patients require no encouragement to spend their pin money, and already receipts are very gratifying. Accrued profits will do much towards the purchase of additional equipment for the enjoyment of patients and staff.

It has also been possible to establish beauty parlor service for our female patients. Such services are appreciated by our patients, and before entertainments and dances, the beautician is very much in demand. We have found too that a little personal attention to the coiffure, following a course of electroshock therapy, is an added stimulus to the patient's well being.

Staff, Administration and Buildings

In order to properly care for the harvest of vegetables, a new root cellar was started, the site chosen near the garden south of the hospital. A building of brick and tile construc-

tion is rapidly nearing completion and will be available this fall for our root crop. A second root cellar will probably be required in the near future.

Through the cooperation of Professor J. A. Weall, Horticulturist at the Ontario Agricultural College, Guelph, a survey of the hospital grounds was made and plans completed towards a landscaping program. It is felt the entire project will take 8 to 10 years to finish but the end result should justify the time and expense entailed. A start was made last fall with the planting of evergreens about the administration building, and 6 large trees were winter moved from a nursery in Toronto. Tulip beds were also placed on the lawns in front of the offices and the appearance from the highway should be very pleasing this summer. We were also fortunate in obtaining some 8,000 seedlings from the Saint Williams Reforestation Depot and these have been utilized to establish our own nursery. It is our intention to add each year until the stock is of sufficient size to utilize for hedges, wind-breaks, Christmas evergreens etc.

STAFF. The medical staff appointed when the hospital was re-opened is unchanged. Other members have been appointed to the hospital staff as follows:

Mr. W. J. Irvine	Chief Supervisor
Mr. C. F. Gee	Assistant Chief Engineer
Mrs. Florence Martin	Dietitian
Miss M. Weldon	Assistant Dietitian (Transferred to Ontario Hospital, Kingston)
Mrs. F. Winrow	Chef
Miss Eileen Rider	Occupational Therapist
Miss Jeanne Porter	Assistant Occupational Therapist
Mr. Percy Shackleton	Senior Clerk and Assistant to the Bursar (Transferred to Head Office, March 31, 1947)
Mr. John H. Daugharty	Senior Clerk (Transferred from Head Office)

Organization of Civil Service Branch: Last August, a local branch of the Civil Service Association was formed under the Presidency of Mr. W. E. Van Dusen. The organization is a most flourishing one and at present has a membership of 191. The Association held dances, several card parties, and a corn roast, all of which were very successful. The branch continues to encourage activities in the sports' field, and a softball team is being entered in the local league this summer. The recreation hall has been turned over to the staff during the evenings, and with the canteen in operation, badminton, table tennis, etc. are becoming very popular.

Medical Group Meetings: Early last winter, to stimulate professional interest, it was decided to hold monthly medical group meetings. In all, four were held. In February, we entertained the local practitioners and the psychiatric staff from Westminster Hospital. These meetings are always of interest, particularly where an interchange of ideas and the discussion of common problems is possible. It is our intention to continue such activities next fall.

Staff Presentations: The following papers and addresses were given during the year by the members of the medical staff:

Dr. D. O. Lynch	—Treatment of Epilepsy	—Group Medical Meeting
	—The value of Psychiatry in the Army	—Lions Club, St. Thomas
	—The Mental Hospital in the Community	—Knights of Columbus, St. Thomas
	—Conserving our Mental Health	—Couples' Club, United Church, Aylmer, Ontario
	—Mental Health	—So Ed Club, St. Thomas
	—The Role of the Psychiatrist in the Community	—Knights of Columbus, Ingersoll
	—Conserving our Mental Health	—Kinsmen's Club, St. Thomas
Dr. J. R. McGeoch	—Bromide Intoxication	—Group Medical Meeting
Dr. T. A. Sweet	—Electroshock Therapy	—St. Thomas Medical Association
	—Modern Concepts of Preventive Psychiatry	—County Teachers' and Parents' Association, St. Andrew's United Church, St. Thomas
	—Modern Psychiatric Concepts and Treatment	—Lions Club, St. Thomas
	—Importance of Mental Health	—Married Couples' Association, Grace United Church, St. Thomas

- Dr. O. J. Stewart —Newer Concepts in the Treat- —St. Thomas Medical Association
 —ment of Neurosyphillis
 —Mental Health —Ladies Aid, St. Andrew's United
 Church, St. Thomas
- Dr. K. M. McGregor—Tuberculosis Program in
 Ontario Hospitals —Group Medical Meeting

In spite of the shortage of trained staff, it has been possible to obtain nurse-aides and attendants in sufficient numbers to carry on the work of the hospital and develop therapy procedures. To date, we have completed four preliminary courses of instruction to both male and female ward staffs. Over 80% now have received instructions comprising 27 lectures and the increased knowledge and more efficient handling of patients has amply rewarded our efforts. One might also remark in passing that the last salary revision has encouraged graduates to apply and at present we have 23 in positions of responsibility.

In concluding, I would like to express my sincere thanks to the entire staff for their earnest cooperation. Without their loyal assistance and advice, the re-organization would have been impossible.

ONTARIO HOSPITAL, TORONTO

DR. S. R. P. MONTGOMERY, Superintendent

Care and Treatment of Patients

In spite of difficulty in obtaining sufficient ward staff, the care and treatment of patients has continued at high level. Four hundred and sixty patients were admitted or received on transfer, and 531 were either discharged, died, or transferred to other hospitals.

Group psychotherapy has been carried on over the past year, each of the medical staff participating, and it has proved very beneficial.

Excellent results are being obtained in the Fever Therapy Unit. Electroshock treatment has been extended and at the present time, a room has been prepared for a second shock machine on the Men's Service.

During the year, 68 men and 110 women making a total of 178 persons were discharged from the hospital. Sixty-one men and 57 women died. The old age group accounts for a considerable proportion of these deaths, and our present population contains 393 persons over sixty years of age. This of necessity adds to the nursing problem because many of these older people are bedridden. Naturally, this old age group affects the remission rate, and somewhat decreases the nursing care available to younger patients.

Many of the patients treated with fever are returned to their own hospitals, ready for a trial in the community, it being felt that it is wiser to probate them nearer home. This naturally decreases somewhat the remission rate here.

Our Consultant Staff: Dr. R. J. W. Brooks, Medicine; Dr. W. W. Barraclough, Neurology; Dr. C. A. Rae, Ear, Nose and Throat; Dr. H. W. Johnston, Gynaecology, and Dr. Burns Plewes, Surgery, have been giving excellent service. Dr. A. J. Elliott, Ophthalmology, has done excellent work in filling a long felt need. It is felt that a word of gratitude for the unflinching service given the hospital by the consultants is very definitely warranted.

During the year, more patients were employed in useful occupations than in the past. Such employment as care of garden, grass cutting, care of flower beds, painting, wall washing, laundry and kitchen work, mechanical trades, etc., were all used to advantage.

On the Women's Service, laundry, cleaning, sewing, mending, hairdressing and occupational therapy were useful adjuncts.

At the end of the fiscal year, there were 33 patients in boarding homes. The social worker has had great success in placement in occupations so that patients have re-established themselves in the community. The boarding homes have been regularly visited by one of the senior physicians.

Probationary patients have been seen by our social worker and some have visited the hospital for further talks with the medical staff.

Staff, Administration and Buildings

In the painting programme, several wards were painted. The four verandahs on the corners of the hospital were each given two coats of paint, which has improved the external appearance of the building considerably. The Public Works Department carried out some building repairs in the main portion of the hospital, particularly brickwork and cornices. Some repairs were made to roofs, although this project was not completed.

Dr. S. M. Colthart, resigned on April 27, 1946.

Dr. G. C. Ferrier returned from active service with the army and was transferred from the Ontario Hospital, Whitby, May 15, 1946.

Dr. M. J. MacLean was appointed to the staff on July 1, 1946, following service with the R.C.A.M.C.

Dr. A. Miller was appointed to the staff on July 8, 1946, following discharge from the R.C.A.M.C.

Dr. W. C. Brown discontinued his service as part-time medical officer on August 31, 1946.

Dr. A. C. DeMille terminated his service as dental surgeon at this hospital on May 30, 1946.

Dr. J. W. Corbett was transferred to this hospital from the Ontario Hospital, Hamilton, on June 1, 1946, as dental surgeon, and resigned on July 18, 1946.

Dr. E. G. Sinclair returned from active service with the army and was transferred from the Ontario Hospital, Whitby, on August 1, 1946, as dental surgeon.

Mr. W. J. Morrow, Chief Male Supervisor of this hospital from April 4, 1921, was superannuated because of ill health on April 3, 1946. His untimely death on March 15, 1947, came as a distinct shock to his many friends and co-workers at the hospital.

Mr. John Boyd, who joined the staff on December 15, 1926, was appointed as Chief Male Supervisor on April 1, 1947.

Courses for both ward-aides and attendants will continue, and have been participated in with great interest.

Papers by Drs. H. K. Moir and M. A. Fischer were presented and published through the Ontario Neuropsychiatric Association:

“Electroshock as an Adjunct in the Treatment of Neurosyphilis”

Dr. H. K. Moir

“Some Clinical, Serological, Chemotherapeutic and Prognostic Observations in a Group of General Paretic Patients”

Dr. M. A. Fischer

ONTARIO HOSPITAL, WHITBY

DR. D. R. FLETCHER, Superintendent

Care and Treatment of Patients

We have had an extremely busy year. We admitted a total of 640 patients, including transfers received, and of that number, 366 were females, making a total of over one patient every day, including Sundays, going into our women's ward, where we have very rarely been able to have more than one nurse on duty.

Our discharge rate was again roughly 70%, which still keeps us in the forefront of hospitals of this class anywhere. One hundred and twenty-six patients were admitted during the year on voluntary application, and several more would have come by that method had they been allowed to do so by their physicians, which indicates, I think, a change in the attitude of the general public toward our hospitals. The increasing pressure of the old age group upon our facilities is evidenced by the fact that we admitted 71 patients over seventy years of age, and this had its effect upon our death rate, which was again high, about half of the deaths having less than six months residence in hospital.

The staff problem remains very acute, especially on the female side, although we have done our utmost to attract intelligent women to this service. Our boarding-out group remains stationary, and although workers are not now at the premium they were some time ago, Mrs. Holliday, our Social Service Nurse, has succeeded in finding remunerative employment for a substantial number. Our group therapy with our alcoholics, and with the mentally ill population, has continued throughout the year, and while it is difficult to assess results, the interest shown by questions and otherwise is gratifying. Our vocational groups are functioning well, and the psychotherapeutic effort with shock therapy is progressing favourably, and it is our belief that these two forms of therapy should go hand in hand. Our ambition is to have every patient on an active therapeutic programme.

Staff, Administration and Buildings

The remainder of our staff who were in the armed forces have been welcomed back and are doing good work. We have reorganized our training course for the nursing sub-staff and the response has been most gratifying. At the present time we have 24 employees taking this course, and the results of the examinations show that they are not only interested but working hard, and I am certain that the results of their efforts will be shown by increased efficiency of treatment as time goes on.

We regret to announce the death of Raymond North as a direct result of his overseas service. Mr. Len Gillard was superannuated on account of ill health. We added to our staff Dr. J. P. Grant and Dr. D. M. Wickware. Miss Christine Robertson resigned on February 23, 1947, having married, and we are left without a dietitian in the meantime. Mrs. William Ruddy, who was my secretary for several years, resigned and moved to Peterborough to be with her husband. The staff this year revived the children's Christmas party, which had been discontinued for some years, and the party was a huge success.

Owing largely to the difficulty of obtaining materials, only necessary repairs were carried out during the year.

In conclusion, I would pay tribute to the members of the nursing staff and their sub-staff who have carried on under tremendous difficulties on account of the lack of numbers throughout the year.

Our boarding-out hostesses have been faced with rising costs and must have found it very difficult to carry on, but none of them has left us on this account. The local press and citizens generally have given us that support which in this district we have almost been led to consider our right, so consistent is it.

ONTARIO HOSPITAL, WOODSTOCK

DR. E. A. CLARK, Superintendent

Care and Treatment of Patients

During the past year, there was a moderate increase in the total number of patients under treatment, but the resident population on March 31st was identical with that one year ago. Practically all the increase in patient movement occurred in the Tuberculosis Division, and resulted from a rather sharp increase in the number of transfers received, and the number transferred to other hospitals. The majority of the patients received from other hospitals were for observation because of suspect tuberculosis. No increase in the number of residents can be expected, as the hospital is filled to such a point as to make further additions to the bed capacity a physical impossibility.

The value of the programme, whereby suspect, as well as active cases of tuberculosis are admitted for observation, is borne out by the rapidly decreasing number of cases of new disease discovered annually in other Ontario Hospitals. In 1940, new cases totalled 137, while in the year just ended, only 57 were found on x-ray surveys.

During the year, a subsidized laboratory, with a staff of four technicians, was opened at the hospital, and this new department is equipped to carry out practically all laboratory procedures. The volume of work has grown very rapidly, and services are extended to all the surrounding municipalities, including hospitals, sanatoria and county health units. Arrangements have been virtually completed to introduce electroshock therapy for use among selected cases in the Tuberculosis Division, and this additional therapeutic measure will be in operation within the next few months.

Staff, Administration and Buildings

The total staff, on a numerical basis, is at a fairly adequate level, but the over-all picture is far from being satisfactory due to the dearth of qualified applicants in various specialized fields. Graduate nurses are still unobtainable, and the occupational therapy departments are very much under-staffed. Female employees in all classifications are most difficult to secure, and, as a result the female services in both divisions of the hospital are working under great difficulties.

No major construction was undertaken during the year, and the difficulty of securing essential materials still creates a constant problem with reference to any major maintenance projects. In spite of this, a considerable amount of work was completed during the year by the artisan staff.

REPORT OF ONTARIO HOSPITALS' CHEST CLINIC

FOR THE FISCAL YEAR ENDING MARCH 31st, 1947

The work of this Clinic in the control of tuberculosis among patients and staff of the Ontario Hospitals has continued according to the plan described in the report for the fiscal year ending March 31st, 1938.

The table*, "Report of Work by Ontario Hospitals' Chest Clinic" indicates the volume of work carried out during the year. It is noted in the "Totals" on this table that the "Number of New Cases Advised for Treatment", both staff and patients, is appreciably less and that the actual work performed has definitely increased over the previous year.

As previously, all mentally ill patients with active tuberculosis have been admitted immediately to Woodstock. While the majority come from other Ontario Hospitals, there are no restrictions or qualifications concerning admission, other than residency in Ontario, and cases are admitted from sanatoria, general hospitals, private homes, etc. For the fiscal years ending March 31st from 1940 to 1947, the numbers recommended for admission to the Tuberculosis Unit from Ontario Hospitals because of active pulmonary tuberculosis have been respectively 137, 99, 90, 79, 73, 62, 69, and 57. It is encouraging to note that there has been a steady average decrease in the number of active cases, and also that the number in the past year has reached a "new low".

In an effort to remove potential sources of infection from Ontario Hospitals, about three years ago a program was begun, by which all patients with questionably active or suspect tuberculosis, who previously had been cared for on the Chest Observation Wards, were transferred to the Tuberculosis Unit for further investigation. This program was completed early in this fiscal year. In order to accept these patients, it has been necessary, to transfer patients with minimal arrested tuberculosis from the Tuberculosis Unit to other Ontario Hospitals.

During the past year, 1,464 staff applicants were examined radiologically. Of these 3 or 0.2% were considered unsuitable for employment because of pulmonary tuberculosis either active or questionably active, and 250 or 17.1% were accepted with reservations because of abnormal chest x-ray markings, possibly but not necessarily tuberculous. These were accepted for temporary employment, and are further investigated, within six months of commencing work. The remaining 1,211 or 82.7% were considered suitable for employment without reservations as far as chest x-ray was concerned. (In previous reports the group unsuitable for employment reached more than 0.6% and those accepted with reservations more than 20% in the mid and latter war years. This was probably accounted for to some extent by the fact that older persons and those not medically fit for the armed forces were applying for positions.)

Three thousand, five hundred and fifty-nine (3,559) patient admissions were examined radiologically. Of this number 22 or 0.6% were found to have active pulmonary tuberculosis and were, therefore, recommended for transfer to the Tuberculosis Unit, and 11 or 0.3% were recommended for isolation and further investigation also in the Tuberculosis Unit because of questionably active or suspect tuberculosis. Also 36 or 1.1% were recommended for temporary isolation in their parent hospital and repeat x-ray in one month because of pneumonia of unknown etiology (not suspected of tuberculosis). In addition 442 or 12.4% were placed on casual observation because of abnormal chest x-ray markings, possibly but not necessarily tuberculous in nature. The remainder 3,048 or 85.6% had normal films.

On March 31st, 1947 there were 603 patients in the Tuberculosis Unit at Woodstock under treatment or undergoing investigation with respect to pulmonary tuberculosis. This total included 342 males and 261 females and represented all the known active or suspect cases of pulmonary tuberculosis in the Ontario Hospitals.

A further sub-division of the patients under treatment in the Tuberculosis Unit is presented in the following table which indicates the present classification with reference to tuberculosis. These figures change frequently as a result of recheck examinations but the table is of interest in showing an approximation in the tuberculous status of patients in residence. Patients who are classified as having "quiescent" tuberculosis are on part time exercise, and those classified as having "probably arrested" disease are for the most part on full exercise, and depending on their next examination, their classification, may be altered; if improved they will be classed as having "arrested" tuberculosis. The "ar-

*Table No. 41. Page 102.

rested" group have been on exercise for at least 6 months without showing any radiological changes. Patients whose tuberculosis is classified as other than "arrested" and whose mental condition has improved sufficiently are transferred to a sanatorium for further treatment of their chest disease.

Sex	Active	Suspect and Act. Quest.	Quiesc.	Prob. Arrested	Arrested	Non Pulmonary	TOTAL
Male	90	45	47	61	86	13	342
Female	84	12	32	83	47	3	261
Total	174	57	79	144	133	16	603

NOTE:—Table G. (Page 130) of the Tuberculosis Unit Report gives information similar to the above and is further subdivided for age groups and extent of disease.

In cases of Ontario Hospital employees who develop tuberculosis, this clinic performs or arranges for re-examinations during their convalescence following discharge from sanatoria and after their return to duty. The clinic also performs artificial pneumothorax refills upon such employees who require these treatments and who live within reasonable distance of Woodstock. There is close co-operation between the Division of Tuberculosis Prevention and this clinic with regard to "post-sanatorium care" of members of Ontario Hospital Staff.

There has been no change in the clinical staff since the report of one year ago. The gradually increasing patient population and personal and the re-opening of the Ontario Hospital, St. Thomas has resulted in an increasing load superimposed on a schedule already filled to capacity. However, it still has been possible to arrange for a complete annual survey and semi-annual recheck at each Ontario Hospital within the year. Dr. Lois E. Kent has continued very ably to conduct the surveys and rechecks up to the present, but the increasing volume of work will necessitate additional clinical staff as soon as available.

The continued assistance and co-operation of the Superintendents and staffs of the various Ontario Hospitals has been of great help in the completion of this work.

Although there is now a quorum on the staff of the Chest Clinic and Tuberculosis Unit to decide on problem cases, and it is, therefore, unnecessary to consult the Special Chest Board as frequently as previously, the members of the Chest Consultant Board, Dr. G. C. Brink, Dr. A. R. Riddell, Dr. K. M. Shorey and other Clinicians in the Division of Tuberculosis Prevention have continued to take a very active interest in this service, and their assistance is deeply appreciated.

ONTARIO HOSPITAL STATISTICS ANNUAL REVIEW

FISCAL YEAR ENDING MARCH 31, 1947

A. H. SELLERS, B.A., M.D., D.P.H., MEDICAL STATISTICIAN

This Review presents a general analysis of data derived from the detailed tables included in the Eightieth Annual Report of Ontario Hospitals for the fiscal year ending March 31, 1947, and in the Reports for preceding years. It is designed to focus attention on some of the essential current facts and trends.

Trends in Patient Population

The numbers of patients in residence and patients under supervision together with the corresponding rates per 100,000 population in each case, for the period from 1933 to 1947, inclusive, are given in Table I.

TABLE I
TRENDS IN PATIENT POPULATION—ONTARIO HOSPITALS
1933-1947

END OF FISCAL YEAR	IN RESIDENCE*		ON BOOKS†	
	Number	Rate‡	Number	Rate‡
1933.....	11,578	325	12,236	343
1934.....	12,068	333	12,883	356
1935**.....	12,314	335	12,879	351
1936.....	13,142	356	13,868	376
1937.....	13,487	363	14,288	385
1938.....	14,056	377	14,736	395
1939.....	14,247	380	15,196	405
1940.....	14,314	379	15,283	405
1941.....	14,486	383	15,490	409

1946.....	15,471	382	16,414	405
1947.....	15,920	380	16,974	405

*Includes patients boarded out from 1934.

†Includes patients in residence and on probation.

‡Per 100,000 population.

**Five-month period.

On March 31, 1947, there were 16,974 patients of all classes under the supervision of Ontario Hospitals, an increase of 560 persons over 1946. This figure represents a rate of 405 patients under supervision for each 100,000 in the general population, or approximately one person in 247. The number of patients actually in residence in Ontario Hospitals on March 31, 1947, was 15,920, an increase of 449 over the preceding year. This is equivalent to a rate of 380 patients in hospital per 100,000 population, or approximately one person in 263.

Patients on Probation and in Boarding Homes

The relationship between the number of patients on probation, the number in boarding homes, the number in residence, and the total number on the books, for each of the past ten years, is given in Table II.

TABLE II
 PATIENT POPULATION—ONTARIO HOSPITALS
 1938-1947
 Number of Patients on March 31

END OF FISCAL YEAR	Patients in Residence		Patients on Probation		Patients Boarded Out		TOTAL ON BOOKS*
	Number	Per Cent	Number	Per Cent	Number	Per Cent	
1938	13,574	92.1	680	4.6	482	3.3	14,736
1939	13,746	90.5	940	6.2	501	3.3	15,196
1940	13,764	90.0	962	6.4	550	3.6	15,288
1941	13,981	90.3	986	6.4	505	3.3	16,490
1942	14,169	90.2	970	6.2	559	3.6	15,712
1943	14,264	90.2	960	6.1	562	3.6	15,811
1944	14,376	90.6	927	5.8	546	3.4	15,866
1945	14,551	91.0	895	5.6	522	3.4	15,987
1946	15,000	91.5	909	5.6	471	2.9	16,414
1947	15,453	91.2	1,026	6.0	467	2.8	16,974

*Includes patients on elopement and not discharged.

On March 31, 1947, a total of 1,026 patients were on probation and 467 patients were under supervision in boarding homes. These two groups comprised 8.8 per cent of the total number of patients on the books. Both the absolute number and the proportion of patients in boarding homes (2.8) is the lowest recorded in the last ten years. The number of patients who are on probation is the highest recorded during the period.

The Age Distribution of the Patient Population

The distribution of the resident patient population (including patients in boarding homes) by sex and age, is given in Table III. The distribution of the general population of Ontario as estimated for June, 1947, is included for comparison. Case rates per 1,000 population for each sex and age-group are also given.

*As in "The Population of Ontario from 1921-1965" Division of Psychiatric Research, August, 1944.
†Rate per 1,000 population at ages.

On March 31, 1947, the resident male patient population was 8,021 and case rate per 1,000 males was 3.87, the corresponding figures for females were 7,899 and 3.92 respectively. The number of male patients exceeds the number of female patients in all age-groups below 50 years. Above that age there is a substantial female excess. The case rates for both males and females increase steadily with age and reach a maximum in the sixty year age-group for males and in the seventy year age-group for females.

Of all patients in residence on March 31, 1947, a total of 2,490 were 65 years of age or older, compared with 1,538 patients at these ages on March 31, 1937.

Age Distribution of First Admissions

A total of 2,713 patients (1,308 males and 1,405 females) were admitted for the first time to an Ontario Hospital during the year ending March 31, 1947. The distribution of

these first admissions by sex and age is presented in Table IV. First admission rates per 1,000 population are included in this table.

TABLE IV
AGE DISTRIBUTION BY SEX—FIRST ADMISSIONS

AGE	MALES		FEMALES

Not Stated.....	1	—	—	—
ALL AGES.....	1,308	0.63	1,405	0.70

†Rate per 1,000 population at ages.

The crude male first admission rate per 1,000 population is 0.63, and that for female first admissions, 0.70. The high first admission rates in the age-groups 65 years and over, compared with other age-groups, are noteworthy. Of all first admissions, 604 or 22.3 per cent were 65 years of age or older.

Data on first admissions and patients in residence for the two sexes combined, by five-year age-groups, are set out in Table V.

TABLE V
FIRST ADMISSIONS AND PATIENTS IN RESIDENCE BY AGE

*1944-47—As in "The Population of Ontario from 1921 to 1965" Division of Psychiatric Research, August, 1944.

The resident population continues to increase in number each year, reaching the highest figure recorded to date (15,920) on March 31, 1947. While there has been little significant change in the resident case rate, this rate also reached a new all-time high in 1947 at 389 per 100,000 population.

An examination of Table VI reveals the essential absolute and relative changes in the several diagnostic categories. Most striking, in recent years, is the steady upward trend in the volume of patients with senile psychosis and psychosis with cerebral arteriosclerosis.

First Admissions by Diagnosis

Recorded trends in first admissions are subject to fluctuations which are independent of the actual incidence of mental disorders in the population. Despite this fact, first admission rates are the most satisfactory guide which we have as to trends in incidence, and the reservations which we formerly were accustomed to attach to them as such were possibly somewhat exaggerated.

The number of first admissions for each of the larger clinical groups, together with the corresponding rates per 100,000 population in each case, for the fifteen-year period 1933-1947, are given in Table VII.

*1933-34—Year ending October 31. 1935—Five months ending March 31. 1936-47—Year ending March 31.
†1944-47—As in "The Population of Ontario from 1921 to 1965", Division of Psychiatric Research, August, 1944.

The volume of first admissions during the year ending March 31, 1947, (2,713) is the greatest recorded in any one year to date. The first admission rate for the year was 66.3 per 100,000 population, the highest rate recorded since 1940 when the rate was 67.3, and considerably higher than those during the war years when admissions were limited due to restriction of facilities. The most important changes in individual diagnosis categories, compared with last year, are the increases in dementia praecox (96 patients) and involuntional psychoses (39 patients).

Discharge and Death Rates

The crude discharge rates and death rates, each expressed in terms of both numbers of total admissions during the year, and total numbers of patients treated during the year, for each Ontario Hospital, are given in Table VIII.

TABLE VIII
DISCHARGE AND DEATH RATES BY HOSPITAL
ONTARIO HOSPITALS—1947

*Patients on the books March 31, 1947, plus discharges and deaths during the year.

The discharge rate for all hospitals combined, 56.4 per 100 patients admitted and 99.5 per 1,000 patients treated, is slightly higher than the corresponding rates for the preceding year, which were 55.9 and 94.8 respectively. The crude death rate for the year, 27.8 per 100 admissions and 49.0 per 1,000 patients treated, is slightly lower than that for the preceding year.

There are wider variations in the crude discharge and death rates in Table VIII among the several hospitals. These observed differences arise from differences in the age distribution and in the types of patients treated. Without correction for age and diagnosis distribution (standardization), neither the discharge rates nor the death rates for individual hospitals are comparable and such direct comparisons have no meaning.

Discharge Rates by Condition on Discharge

The number of discharges and the discharge rates by condition on discharge, expressed both in terms of total admissions and total patients under care, are shown for each hospital in Table IX.

TABLE IX
DISCHARGE RATES BY CONDITION ON DISCHARGE

*Patients on the books March 31, 1947, plus discharges and deaths during the year.

It is to be noted that the data on "condition on discharge" in this table refer to psychotic patients only. All other discharges are grouped under the caption "Without Mental Disorder", without reference to condition on discharge.

During the year ending March 31, 1947, a total of 1,983 patients were discharged from the books of Ontario Hospitals. Of this number, 395 were non-psychotic patients, and the remainder (1,588) were psychotic patients. Of the latter, 716 or 45.1 per cent were discharged as "recovered", 745 or 46.9 per cent were discharged as "improved" and 127 or 8.0 per cent were discharged as "unimproved".

The general "recovery" rate for psychotic patients discharged during the year, 35.9 per 1,000 patients treated, is slightly higher than that for the previous year.

The variations in the "recovered", "improved", and "unimproved" rates among the several hospitals are substantial. Part of this is due to differences in the age distribution and in the type of patients in the various hospitals, but differences in the interpretation of the term "recovered" and "improved" may also be a factor.

Discharge and Death Rates for Selected Psychoses

In order to throw some light on the recorded discharge and mortality data for individual clinical entities, discharge and death rates for six major groups of psychoses are given in Table X. Rates in this table are expressed as before both per 100 total admissions and per 1,000 patients under care for each diagnosis group.

TABLE X
DISCHARGE AND DEATH RATES FOR SELECTED PSYCHOSES
YEAR ENDING MARCH 31, 1947

*Patients in residence, March 31, 1947, plus discharges and deaths during the year.

†Including psychoses with cerebral arteriosclerosis.

‡Including psychoses due to cerebral syphilis.

Ten per cent of all the patients under treatment during the year were discharged, and five per cent died. The discharge rate is by far the highest in the manic-depressive group, 28.9 per cent of the patients treated being discharged during the year. By contrast the discharge rate for the senile psychotic group amounted to only 4.2 per cent of the total patients treated during the year. In other specific diagnosis categories the discharge rate is also comparatively low, e.g. 6.2 per cent for dementia praecox, 6.6 per cent for epilepsy and 7.8 per cent for general paresis.

It is to be noted that the figures in the total row of Tables X and XI do not agree with those in other tables. This is due to the use of a slightly different base for "patients treated", arising out of lack of data on the diagnosis of patients on probation and on elopement, i.e. patients on the books but not in residence.

In the last analysis, discharge is a most satisfactory criterion of success in treatment, and analysis of discharge and death statistics by diagnosis, age, and sex can be extended profitably. In future years, as much useful data of this sort will be included in this Review as the program may permit. Due to the pressure of other statistical commitments, it has not been possible to include a review of the noteworthy trends in discharge rates by diagnosis, as planned for this year.

Discharges and Deaths by Age

Data have already been presented on case frequency by age (Tables III, IV, V). The relationship between discharges and deaths at selected ages and the total number of admissions and the number of patients under treatment at those ages during the year, is illustrated by Table XI.

TABLE XI
DISCHARGES AND DEATHS BY AGE
YEAR ENDING MARCH 31, 1947

*Patients in residence, March 31, 1947, plus discharges and deaths.

During the year ending March 31, 1947, for every 100 patients admitted to Ontario Hospitals, 56 were discharged and 28 died. This leaves a residuum of 14, a figure which has been referred to as the "retention rate".

The variations with age in the discharge and death rates are striking. The discharge rates per 1,000 patients under treatment are highest in the age-groups 15-34 years, and lowest at ages under 15 and 65 years and over. In the age-group 15-24, 16.9 per cent of those under treatment were discharged during the year, at ages 25-34 years, 14.9 per cent of those treated were discharged. Discharge rates show a steady decrease with age in the age-groups above 15-24 years.

The specific death rate per thousand patients under treatment is lowest among patients at ages under 15 years, a group comprised largely of mental defectives, and increases progressively thereafter with increasing age. At ages 65 and over, deaths exceed discharges by four to one.

The crude death rate of the patient population is five times that of the general population of the Province (Table XII) but at all ages under 65 years the excess mortality is much greater.

Principal Recorded Causes of Death

The principal recorded cause of death for the Ontario Hospital patient population during the fiscal year ending March 31, 1947, are given in Table XII. Data for the Province as a whole are included for comparison.

TABLE XII

GRAND TOTALS.....	976	51.7	100.0	39,758	9.7	100.0

*Rate per 1,000 under treatment (18,879).

†Rate per 1,000 population (4,101,000).

The *crude* death rate from all causes during the year ending March 31, 1947, was 51.7 per 1,000 patients under treatment compared with 55.2 for the preceding year. Of the 976 deaths among patients in Ontario Hospitals during the year 297 or 30.4 per cent were attributed to diseases of the heart, compared with 39.2 per cent in 1946 and 41.2 per cent in 1945. Pneumonia and bronchitis were responsible for 176 deaths or 18.0 per cent of the total and diseases of the arteries contributed 155 deaths or 15.9 per cent of the total deaths. Tuberculosis was responsible for 57 deaths or 5.9 per cent of the total, figures somewhat higher than last year.

The last twenty years have witnessed important changes in the mortality experience of Ontario Hospitals. Further data on mortality trends will be included in subsequent Annual Reviews, as opportunity permits.

Comment

This brief Review is intended to draw attention to certain of the salient points reflected by the data contained in the Eightieth Annual Report of Ontario Hospitals. A great deal of information not covered by this Review is included in the forty-one detailed tables which form the main body of the Report, as well as in the thirty-nine supplementary tables covering special fields of activity.

It is hoped that the ANNUAL STATISTICAL REVIEW may achieve its objective and that, in due course, it may be extended to bring into focus the more important highlights reflected by the great volume of detailed statistical data which are tabulated annually.

(b) Old Cases	737	798	1,535
TOTAL CASES EXAMINED	1,133	1,324	2,457

COMMUNITY MENTAL HEALTH SERVICES

In March, 1926, an out-patient clinic was established at the Toronto Psychiatric Hospital which has been in continuous operation since that date. In 1946, the clinic outgrew the quarters available in the Psychiatric Hospital and moved to a separate building at 112 College Street. Early in 1930, the Provincial Government commenced the organization of mental health clinics throughout the Province. These clinics were developed to assist in the early identification and community treatment of mental illness as one phase of a preventive public hospital program. Operating through certain Ontario Hospitals, it is part of their task also to assist in the re-establishment of persons recovering from more severe mental conditions.

Following a preliminary organization conference in June, 1930, clinics were established in six Ontario Hospitals. These clinics continued in active operation until World War II. During the war sixty physicians enlisted in the Armed Forces from the Ontario Hospital Service and certain clinics were closed; others carried on part time with a reduced staff.

During the past year, the Mental Health Clinics attached to the Ontario Hospitals at London, Hamilton, Brockville and Kingston have carried on a full-time program and it has also been possible to re-establish the staff of the out-patient department, Toronto Psychiatric Hospital.

As a result of experience gained in the operation of Mental Health Clinics for fifteen years, it appeared that the Department might make a further addition to preventive psychiatric services by assigning consultant psychiatrists to selected general hospitals in the Province. It was considered that by making psychiatric advice and treatment available in the general hospitals the necessity for admission of a considerable number of patients to a mental hospital might be prevented.

In accordance with this policy, during the past eighteen months consultant psychiatrists have been appointed to the Civic Hospital, Ottawa, general hospitals at St. Catharines and Welland, and to the Victoria Hospital, London. The experience gained during the first year of operation indicates that this type of community mental health service is worthy of continued trial.

A summary of the work of the Consultant Psychiatrists and of the Mental Health Clinics during the fiscal year ending March 31, 1947, follows.

SUMMARY OF THE WORK OF CONSULTANT PSYCHIATRISTS

YEAR ENDING MARCH 31, 1947

MENTAL HEALTH CLINICS

C. ROGER MYERS, Ph.D., Psychologist

The object of this brief summary is intended merely to draw attention to some of the principal facts reflected in the data presented in the annual reports of the Mental Health Clinics, for the year ending March 31, 1947.

This year, 3,794 new cases were seen at the five Clinic Centres presently in operation, the largest volume of new cases recorded since the peak year 1941. A total of 56,344 new cases have been seen by all clinics since the inauguration of the Mental Health Clinic service in June, 1930. Case contacts examined during the year by members of the clinic staff, numbered 11,312. Further information relative to the case load, for each clinic, is given in Table 1.

The Children's Aid Society and family physicians referred 53 per cent of the new cases to the clinic centres during the year, while the various courts accounted for 15.1 per cent, the most favourable figure shown since 1941. Table 2 further details the sources from which the clinics received their cases.

As in each of the previous years since 1939, the new male cases (52.5 per cent), referred to the clinics during 1947, is slightly higher than the female cases (47.5 per cent). An increasing use of clinic facilities by those in the adult age group, (38.2 per cent of the new cases reported), is again evident.

The group classified as being of school age, (6-13 years), contributed 27.0 per cent of the total cases. Table 3 and Table 4 respectively give further data relative to the above.

Specific problems encountered by the Mental Health Clinics are presented in Table 5. Suspected mental illness and suspected mental defect combined contributed 881 cases or 33.7 per cent of the total number of cases for the year. Estimation of Intelligence and Child Training follow with 366 and 265 cases, respectively. Since 1941, the number of cases of Juvenile Delinquency has dropped from 469 to 256 for the current year.

Clinic patients classified according to Intelligence grades are given in Table 6. Of the new cases seen during the year, 1,024 or 39.2 per cent were considered "Normal" and 284 or 10.9 per cent were catatoried as "mentally defective". As evident in former years the proportion of subnormal cases continues to be large.

The frequency of certain specific psychiatric conditions found among the new cases examined by the Mental Health Clinics is shown in Table 7. Of the total number, 391 or 15.0 per cent were classified as "Neuroses" while "Mental Defects" contributed 322 or 12.3 per cent. Those classified as "Schizophrenia" were considerably less numerous (120 or 4.6 per cent).

In Table 8 the types and frequency of treatments recommended by the Clinics are given. Individual Psychotherapy was recommended for 400 of the new cases and Institutional Care for 440. Of the latter number, 37 were recommended for admission to the Ontario Hospital School, Orillia, and 213 to other Ontario Hospitals.

TABLE No. 1
CASE LOAD

CLINIC	YEAR ENDING MARCH 31, 1947			Number of New Cases (Since 1930)

HONOURABLE G. H. DUNBAR,

Minister, Department of Reform Institutions.

SIR:

In 1946, the Legislature enacted that there be a Department of Reform Institutions, and that the Minister presiding over, and having charge of, such Department be responsible for the administration of:—

- (a) The Andrew Mercer Reformatory Act;
- (b) The Extramural Employment of Persons under Sentence Act;
- (c) The Female Patients and Prisoners Protection Act;
- (d) The Female Refuges Act;
- (e) The Gaols Act;
- (f) The Industrial Farms Act;
- (g) The Parole Act, 1946;
- (h) The Public Institutions Inspection Act;
- (i) The Reformatory Act; and
- (j) The Training Schools Act,

and the regulations thereunder and such other Acts and the regulations thereunder as may be assigned to him by the Lieutenant-Governor in Council.

You were appointed Minister of this new Department and, by proclamation, it commenced its responsibilities, effective April 1, 1946.

You, as Provincial Secretary, had been in charge of the Prisons and Reformatories Branch and, therefore, were quite familiar with this work. You had visited all of our more important Institutions, many of the others, and some in the United States. Very soon after your appointment as Minister of the new Department, you went to Europe to visit Prisons and other Institutions there to personally observe and study the most progressive and effective methods of reform or rehabilitation of delinquents and law breakers.

Therefore, when you returned, careful, but speedy decisions were made, and plans were developed accordingly, to make your programme effective and, because of the volume of work involved, it was imperative that our Main Office staff be strengthened by engaging additional experienced specialists. Thus, Mr. A. R. Virgin was appointed Director of the Department. He had much of the experience requisite and, for many years, had been the successful Superintendent of the Ontario Training School for Boys, Bowmanville. Mr. J. E. Cunningham, who already had extensive experience in our Public Service, was appointed Supervisor of Physical Training and Recreation. Mr. Frank Potts, with excellent professional and practical experience, was appointed Chief Psychologist.

It was decided that in developing your programme emphasis must be placed on the following:—

- (1) Considerable extension of the classification of prisoners, with smaller Institutions and for special groups.

- (2) Replacement of the Common Gaols by modern Industrial Farms. This, as it progressively evolved, would help to remedy the classification problem and, at the same time, reduce the size of the inmate population at the Ontario Reformatory, Guelph, and the Industrial Farm, Burwash.
- (3) Rapid expansion of the academic study programmes in the Reformatories and Industrial Farms to the effective limit.
- (4) Inauguration of formal vocational training and expansion of it to the effective limit in conjunction with the present industrial and other work.
- (5) Physical drill for all inmates likely to benefit by it, with an up-to-date recreation programme, physical and mental, for all inmates.
- (6) Permanent employment of specialists to apply the best penological and scientific methods.
- (7) Increased care in the selection of suitable officers and employees. Formal, as well as practical, training of Guards, and special courses for other personnel as conditions require it. Selection of faculty to give the technical and formal training on a broad perspective.
- (8) Systematic and intensive efforts by very carefully selected personnel to rehabilitate ex-prisoners.

It is not difficult for experienced, co-operative persons to pool their knowledge and make plans which will give effective results—if the necessary funds are made available. Obviously, each item in this reform programme must involve considerable expenditure. The amount of funds required year by year depends on prevailing cost conditions and the speed in bringing the programme to reasonable fulfilment. When there are effective results, some of the cost might well be regarded as permanent investment. The cost is partly capital and partly maintenance. Each Institution is, in effect, a community. There are many salaries to be paid and thousands of items to be purchased or produced through the work of the inmates, and there is much production in our Institutions which have industries or are engaged in agriculture.

As the first step toward better classification of prisoners and to provide accommodation for the increasing number of them, additional facilities had to be found. Materials for permanent buildings were scarce or even unobtainable and, therefore, such construction would be necessarily slow. Materials were costly and required for civilian housing. Therefore, temporary accommodation had to be found. Contact was made with the Federal Authorities regarding land and hutments which might be available.

The Military Training Camp at Brampton had been built on land owned by the Province. During the summer of 1946 the Province regained control of that land with the hutments of that Camp. In co-operation with the Department of Public Works, we placed prisoners there from the Ontario Reformatory, Mimico, to recover materials from some of the hutments to use them for urgent purposes elsewhere for other Departments. A considerable portion of the Camp was retained and a very important decision was made, as a result of which, the Ontario Reformatory, Brampton, was established for an advanced programme for a selected group of young prisoners.

Similarly, plans were made respecting the Monteith Institution, but it was not returned to our control until just after the end of the fiscal year.

We had reason to expect that the Airport at Carp would be acquired for our use, but finally we were disappointed, and, at the end of the year, other plans were made for establishing an Industrial Farm in Eastern Ontario.

The very considerable progress made in the Department's plans and programme are given in interesting detail in the attached report of Mr. A. R. Virgin, Director.

Herewith, attached, are the reports of the Senior Inspector, Mr. T. M. Gourlay, the Superintendents of the Reformatories and Industrial Farms, the Board of Parole, the Salvation Army Prison and Police Court Work, and the separate statistics of the Reformatories and Industrial Farms and the Common Gaols for the year which ended March 31, 1947.

Following are the statistics showing the commitments and the number sentenced for each of the years from 1913 to 1947:—

YEAR ENDING SEPTEMBER 30TH	APPROXIMATE POPULATION OF ONTARIO	PERSONS COMMITTED FOR TRIAL	PERSONS SENTENCED TO PRISON
1913	2,767,000	19,250	11,897
1914	2,770,000	22,777	14,801
1915	2,788,000	20,337	12,663
1916	2,728,000	16,100	9,364
1917	2,750,000	12,445	7,867
1918	2,769,000	13,242	7,874
1919	2,821,000	13,096	7,904
1920	2,849,000	14,756	8,643
1921	2,934,000	16,800	9,790
1922	3,101,000	14,800	9,312
1923	3,035,000	13,995	8,036
1924	3,075,000	15,879	8,834
1925	3,115,000	18,023	11,306
1926	3,151,000	18,033	11,371
1927	3,176,000	20,578	13,927
1928	3,241,000	23,786	16,358
1929	3,285,000	25,980	17,626
1930	3,366,000	29,126	21,421
1931	3,432,000	26,358	18,127
1932	3,479,000	25,235	15,804
1933	3,510,000	22,484	14,538
1934	3,540,000	20,916	13,509
YEAR ENDING MARCH 31, 1936			
1937	3,600,000	24,053	16,356
1938	3,711,000	27,592	20,618
1939	3,731,000	30,345	23,649
1940	3,750,000	34,914	27,926
1941	3,755,000	33,075	26,543
1942	3,757,000	30,875	25,627
1943	3,760,000	27,225	19,652
1944	3,790,000	25,411	18,551
1945	3,800,000	25,975	19,159
1946	3,815,000	26,299	19,132
1947	4,101,000	29,409	21,614
	4,189,000	32,541	25,355

NOTE.—The fiscal year was changed in 1935 to end March 31.

It is therefore seen that during the year the commitments increased from 29,409 to 32,541—an increase of 3,132. Also, there was an increase in the number sentenced from 21,614 to 25,355—an increase of 3,741. Most of this increase occurred in the category Crimes Against Order and Peace, where the increase was 3,359. In the other three main categories—Crimes Against the Person, Crimes Against Property, Crimes Against Public Morals and Decency, the variations in number were comparatively small.

The increased number of sentences was mainly in those of short duration—three months and under.

There was a reduction in the number of indefinite sentences from 1,508 to 1,269.

There have been widespread efforts throughout the Province to reduce delinquency and crime by juveniles and youths. There is evidence that these efforts are, in particular, at least achieving the results desired. The number of juveniles sent to Training Schools dropped from 539 to 451. The number under sixteen years of age committed to Gaols dropped from 211 to 154 and the number committed in the age group sixteen to nineteen years dropped from 4,553 to 3,535.

Increases occurred in the groups twenty years and over.

Commitments of males markedly increased, with a comparatively small increase in the number of females.

However, these statistics do not record the degree of seriousness of any particular crimes. Many crimes may be in the same legal category, but one or more of these crimes, because of their sensational features or viciousness, may attract much public attention, comment, or even consternation and indignation, while most of the other crimes in the same legal category may attract comparatively little notice, except to those persons immediately concerned, but it is generally evident that, whenever a crime is committed, the victim and the perpetrator and the State all lose. Therefore, all gain when crimes and delinquency are prevented and when law breakers, through rehabilitation, become good citizens.

Because of your direction, many forward steps were taken during the year, despite many handicaps due to current conditions. Thus, it has been an exceedingly encouraging year, with substantial progress and the prospect of more progress in the immediate future. We are very grateful to all Departments, officials and others, who have given us much assistance.

Yours sincerely,

C. F. NEELANDS,
Deputy Minister.

HONOURABLE GEORGE H. DUNBAR,

Minister, Department of Reform Institutions.

SIR:

Concurrent with the establishment of the Department of Reform Institutions, an overall PLAN was made to serve as a guide in the development of modern procedures in the treatment of persons confined to the various institutions under the control of the Department.

The ONTARIO PLAN includes the basic factors common to any modern system of training in reformatory institutions. Its main objective is to rehabilitate into society, those persons who through asocial behaviour have been committed to terms of imprisonment. These basic factors have been fully outlined in the remarks of the Deputy Minister of this Department and need not be repeated here.

The first step towards putting The Ontario Plan into action was to thoroughly instruct the Superintendents of our adult institutions so that they in turn might be able to plan the many details pertaining to their own particular institutions.

On your instruction a Superintendents' Conference was convened at the Parliament Buildings for a two-day discussion period. In attendance at the Conference were Mr. W. L. McJannet, superintendent of the Industrial Farm at Burwash; Mr. J. R. Elliott, superintendent of the Ontario Reformatory, Mimico; Col. G. H. Basher, superintendent of the Ontario Reformatory, Guelph, and Mr. J. A. Graham, governor of the Carleton County Gaol, Ottawa—(later appointed as superintendent of the Ontario Reformatory, Brampton). In your absence the Deputy Minister addressed the meeting and advised the superintendents that it was your wish that they should do all in their power to speedily introduce and promote an "all-out" system of treatment along the most modern penological lines.

The conference then considered the plans for further classification, scientific studies, education (academic and vocational, eradication of illiteracy, etc.), physical training and recreation, hobbies, after care, staff selection and training. Instructions were issued to set aside a Reception Unit at the Ontario Reformatory, Guelph, to receive prisoners in the 16-21 year old age level so that suitable young prisoners might be selected for training in the new institution at Brampton.

Considerable thought was given to staff selection and motivation; rating standards; selection and training of senior officer material; development of morale (particularly in isolated institutions) by providing proper recreational outlets and community activities.

Official Rules and Regulations pertaining to institutions were reviewed in order to ensure that there was uniformity with respect to those rules. In particular, discussion centred on (a) Transportation provided inmates on

leaving institutions; (b) Gratuities for rehabilitation purposes; (c) Clothing; (d) Weekly inspection of institutions by the physician; (e) Annual Medical and Dental reports; (f) Feeding; (g) Punishments.

Superintendents were again instructed to see that prisoners leaving on parole or discharge were adequately clothed.

On the second day of the conference the superintendents visited and inspected the Military Camp at Brampton which was being equipped for the new experiment in the training of young prisoners.

The afternoon session convened at the Ontario Reformatory, Guelph, for discussion of the plan for the physical training and recreation feature to be introduced early in the following new year. Instructors in physical training were to be graduates of our own training courses and it was your wish that these be relieved of guard duties and devote full time to their specialty.

Training Courses were to be set up at the Ontario Reformatory, Guelph, for men in our guard service. Superintendents were urged to employ additional men to provide relief for those sent on course.

The members of the conference had the privilege of attending the closing banquet of Staff Training Course No. 1, for Physical Training and Recreation, held at the Y.W.C.A., Guelph, during the evening of December 13, 1946.

THE ONTARIO PLAN AT WORK

The initial classification of prisoners to institutions makes a division according to type, length of sentence and previous record. It is as follows:

1. Classification of Prisoners and Specialization of Institutions

- (a) *Ontario Reformatory, Guelph.* Prisoners under age 21, and first offenders over age 21.
- (b) *Burwash Industrial Farm.* Recidivists over age 21 (6 months or longer).
- (c) *Ontario Reformatory, Mimico.* Recidivists—short term (under 6 months).
- (d) *Andrew Mercer Reformatory for Women.* Offenders over age 16 (up to 2 years).
- (e) *Ontario Reformatory, Brampton.* Open institution for treatment of selected young male prisoners, ages 16 to 21 inclusive.

Negotiations are under way for the return of the Industrial Farm at Monteith from the Department of National Defence. This property was used as a Prisoner of War camp during the recent war. It will again receive prisoners from gaols in the eastern part of Northern Ontario and provide useful employment.

2. Staff Training

Two six-week courses in Physical Training and Recreation, and Defence methods were carried out. Graduates of these courses are employed full time in their capacity.

Defence Training (Judo) of Staff, has established confidence and has already been effective in general control.

NOTE.—At the Ontario Reformatory, Guelph, inmates receive regular physical training and classes are in progress daily from 8.30 a.m. These classes commenced on January 6, 1947, and have met with an enthusiastic and spontaneous effort on the part of the inmates with a marked uplift in morale and a corresponding reduction in disciplinary problems.

General 4-week Staff Courses are now under way on an experimental basis. Results will be studied and curriculum revised following each course. It is planned to as quickly as possible provide formal training to all members of the guard service.

Guards on course are tested and interviewed by the Chief Psychologist. His report, together with that of the supervisor of training, are now factors, in considering promotion in the service.

General Staff Courses are broad in scope and are outlined as follows:—

1. Practical Techniques

Rules of Conduct, physical training and recreation, personal defence, use of weapons, first aid, practical psychology, practical aspects of abnormal behaviour, officer-inmate relationships, custody, emergencies, keys and locking devices, taking counts of inmates, search of rooms and cells, search of personnel, public relations of the institution officer.

2. Essential Background and Related Material:

(1) PUBLIC SERVICE. The Ontario Civil Service, pension system, Department of Reform Institutions, facilities for mentally ill, epileptic and mentally deficient, public assistance and welfare services, identification.

(2) FIELD OF CRIME AND CRIMINALS. Early conceptions of crime and criminals, development of modern penology, the inmate—statistical picture, juvenile delinquency, prevention of crime and delinquency.

(3) ONTARIO SYSTEM OF POLICE, COURTS AND PROBATION. Police organization and methods, criminal prosecution and court procedure, suspended sentence and probation, jails—their present accommodations and functions.

(4) THE ONTARIO PLAN OF INSTITUTIONAL TREATMENT. Facilities and general programme, juvenile schools, introduction to the institution programme, classification, mental hygiene, medical services, education, recreation, industrial training and productive employment, religious services, feeding and housing, letters and visits, discipline, reports, parole, conditional and supervised release.

(5) PRACTICAL WORK. Defence training, physical training and recreation, drill, firing range, trainee assignment, experience on post.

Below is the distribution of periods, basis for assessment, and rating of trainees:—

Instructional Periods	Hours	
Lectures	50	
Defence Training	15	
Drill	10	
Physical Training and Recreation	12	
Firing Range	4	
Trainee Assignments	16	
	107	hours
Practical Periods		
Shops, etc.	10	
	10	"
Examinations		
Written	3	
Defence Training	6	
Drill	4	
	13	"
	130	hours

Assessment

Written Exam.	100
Defence Training	100
Drill	100
Trainee Assignment	100
Spot Test	50
Note Books	50
	500

Rating

90%—100%.....	Superior
75%— 89%.....	Very Good
65%— 74%.....	Good
50%— 64%.....	Pass

3. Brampton:

In keeping with the policy laid down in the Ontario Plan a forward step was taken on February 3, 1947, with the opening of a new Reformatory at Brampton for the training of young prisoners from 16 to 21 years of age, inclusive. This is an open institution carefully staffed and well equipped to provide training in trades and academic subjects. Boys for Brampton are selected by the Classification Committee which reviews twice monthly all within the above age range who are awaiting disposition in the Reception Wing at Guelph. The school has a capacity of 200.

4. Education:

Teaching staffs in adult institutions have made surveys of inmate populations to ascertain the extent of illiteracy problems and courses are already established to provide necessary training. New and well equipped classrooms are being set up at Guelph. Additional teachers will be employed during the coming year to provide for all inmates who are capable of further academic work.

The educational programme will also make provision for the setting up of vocational courses in building and related trades as well as radio, machine shop and auto mechanics.

5. *Scientific:*

To further the scientific study of inmates' needs, a chief psychologist has been employed and has set up techniques which will apply to all our institutions when qualified staff are available.

The Psychologist will provide service to those in need of psychotherapy. He will arrange for the interview and study of discipline cases and the compilation of case histories. Reports will be available for use of the After Care staff in placing of discharged inmates in employment.

6. *After Care:*

Prior to parole or discharge, prisoners are interviewed by Parole officers so that assistance can be readily given in the re-establishment of the prisoners upon return to civil life. Particular attention is being paid to the needs of young prisoners until they once more become adjusted to community life. As this service becomes more widely known it is found that the demands upon the rehabilitation service are increasing.

The treatment programme which you have inaugurated in this Department and which is outlined above, has already attracted the attention amongst provincial governments and organizations interested in penal reform. Some of those governments and organizations have sent representatives to inspect and study techniques and methods already in action in this province. They have expressed amazement that The Ontario Plan is so well established and so broad in scope.

Staff who have participated in the courses of training have in most cases returned to their institutions with renewed interest and enthusiasm for their work. For this, credit must go to the Superintendents who have so wholeheartedly supported The Ontario Plan and to the Supervisor of Physical Training and Recreation under whose leadership the courses have been conducted.

In this report it has been said that your programme has improved inmate morale. This is most marked in the new institution at Brampton where it is not unusual to find boys requesting that the privilege of possible parole be deferred in order to take advantage of longer training in their trade courses.

Yours sincerely,

A. R. VIRGIN,

Director of Reform Institutions.

HONOURABLE G. H. DUNBAR,

Minister of Reform Institutions.

SIR:

The following is a report of the Inspection Branch, Department of Reform Institutions for the fiscal year ending March 31, 1947,

During the war years inspections were made by me once each year at thirty-five County Gaols, two City Gaols and eight District Gaols. In addition inspections were made of the Ontario Reformatory, Guelph, the Mercer Reformatory, Toronto, the Industrial Farm, Burwash, the Ontario Training School for Boys, Bowmanville, the Ontario Training School for Girls, Cobourg, St. John's Training School for Boys, Toronto, St. Joseph's Training School for Boys, Alfred, St. Mary's Training School for Girls, Downsview, and the Female Refuges in Toronto and Sudbury. All administrative details were under the direction of Mr. C. F. Neelands, Deputy Minister.

Late in 1945 it was decided that more frequent inspections be carried out. Mr. Neelands was relieved by me of administrative details concerning gaols and Mr. Alex. Brown, who for many years was Gaoler at Renfrew County Gaol, Pembroke, Ontario, was appointed as an Inspector. A more intensive programme was instituted for City and County Gaols, including personal record cards and complete files for each employee. Mr. Brown was employed almost entirely in inspections and made his reports to my office.

Mr. Brown was associated with me in this work for a short time during the fiscal year ending March 31, 1946, and was then transferred to the Ontario Reformatory, Guelph, as Assistant to Colonel G. Hedley Basher, the Acting Superintendent. On October 1, 1946, Colonel Basher was appointed as Superintendent and Mr. Brown as Assistant Superintendent at Guelph.

While this change rather disrupted our plans in the office, the appointment of Mr. Brown as an Inspector and later to the Guelph post, were excellent examples of the value in promoting experienced officials.

In the meantime, Mr. Ralph Ayres who had some twenty years experience in Toronto Gaol, was transferred to my office as an Inspector on April 1, 1946, and remained in that capacity for the complete fiscal year. He was later promoted to the position of Superintendent at the Industrial Farm, Monteith, Ontario.

In addition to inspecting, Mr. Ayres was used for the purpose of training new Gaolers and the results were very satisfactory.

All new Gaolers are required to take a course in Toronto Gaol and while they do get a thorough general training, any additional instructions in the gaol to which they are appointed is a decided advantage. Mr. A. J. Graham, now Superintendent at the Ontario Reformatory, Brampton, received his early training in prison work in this manner. This, coupled with his extensive academic training, has produced results of which we are all justly proud.

During the year one hundred and three inspections were made in forty-five City, County and District Gaols. Inspections were also made in each gaol by Officials of the Department of Labour. Inspections were also made at Ontario Reformatory, Guelph, Ontario Reformatory, Mimico, Ontario Reformatory, Brampton, Mereer Reformatory, Toronto, Industrial Farm, Burwash, Ontario, Ontario Training School for Boys, Bowmanville, Ontario, Ontario Training School for Boys, Galt, Ontario, Ontario Training School for Girls, Cobourg, Ontario, St. Mary's Training School for Girls, Downsview, St. John's Training School for Boys, Toronto, St. Joseph's Training School for Boys, Alfred, Ontario, Good Shepherd Refuge, Toronto and Good Shepherd Refuge, Minnow Lake.

A number of Lock-Ups were also inspected by our Inspectors and Officials of the Department of Labour. The locations were as follows: Oakville, Burlington, Georgetown, Brockville, Cornwall and Perth. A number of corrections in construction were recommended and the necessary alterations have been made.

Inspections of penal and reformatory institutions and regulations are made under the authority of Chapter 380, Revised Statutes of Ontario, 1937, The Public Institutions Inspection Act.

When inspections are made at gaols, the Inspector submits a written report to the Department and the following points are noted:

1. Number of prisoners in custody.
2. Number committed for a specific period.
3. Comparative number for the same period during the previous year.
4. Comparative numbers committed and the greatest and least numbers during a four year period.
5. Number of cells and other accommodation provided.
6. General conditions, cleanliness, structural defects, if any, condition of yards and walls, drainage facilities, sanitary equipment, heating and fire fighting equipment, beds, bedding, clothing, type of building construction, laundry facilities, health, classification and employment of prisoners, care and storage of prisoners' clothing and personal effects, bookkeeping and records, quality, quantity and preparation of food, condition of cooking facilities, cutlery and food containers, discipline of prisoners and officers.
7. A sample menu is submitted and also a table showing comparative food costs for all gaols for a four year period.
8. Prisoners are permitted to seek advice and make complaints during inspections.
9. Names, ages, dates of appointments, salaries and perquisites of officers.
10. General recommendations and remarks. Under this heading the Inspector makes recommendations for the general improvement of the gaol, the proper care and custody of the prisoners, working conditions and other matters in the interest of the staff and prisoners, etc.

When inspection reports are reviewed by this office, copies, in the cases of City and County Gaols, are forwarded to the Gaoler, Sheriff and County Officials in each case. The Sheriff, who is in charge of the gaol, is given directions with reference to what is considered necessary. The Municipality is responsible for carrying out recommendations at the request of the Sheriff who, in turn, reports progress to this office.

In District Gaols, which are totally controlled by the Province, copies of reports are forwarded to the Sheriffs and Gaolers and requisitions for any work or materials required are forwarded to the Department of Public Works.

Written reports are submitted to the Department by our Inspectors in a similar manner after inspections are made at Reformatories, Industrial Farms, Training Schools and Refuges. Directives regarding recommendations are then forwarded to the Superintendent and other responsible officials in each case.

Written reports are also submitted to the Department with recommendations made to correct defects, etc., found in Lock-Ups. The local Municipal Authorities are furnished with copies, together with advice and guidance to effectively correct anything found to be unsatisfactory.

Investigations concerning escapes, attempted escapes and administration were conducted during the year, as follows:

County Gaol, Barrie	1
" " Belleville	1
" " Brantford	1
" " Cayuga	1
" " Chatham	1
" " Perth	1
City " Toronto	3
County " Walkerton	1
" " Windsor	2
Ontario Reformatory, Brampton	1
" " Guelph	1
" " Mimico	3
Industrial Farm, Burwash	2
St. Joseph's Training School for Boys, Toronto	1
St. Mary's Training School for Girls, Downsview	1

The number of escapes and attempted escapes was reduced to a considerable degree as compared with former years. This was due, in part, to more intensive supervision by our Inspectors, the increase in staff and to the addition of younger and more active officers. At the close of the war a number of over age temporary officers were gradually replaced by young men who had returned from the Armed Services. In most of our institutions an eight hour day was established and where the low inmate population did not justify this, sufficient additional staff were employed to substantially reduce hours of work.

Cost-of-living bonuses were absorbed into salaries during this period and new basic salaries were set at higher rates for all employees. Annual increases for deserving persons were established and a policy of promotions within the service adopted.

At the close of the fiscal year the numbers employed in institutions totally controlled by the Department, were as follows:

District Gaols	103
Ontario Reformatory, Guelph	239
" " Mimico	61
" " Brampton	29
Mercer Reformatory, Toronto	55
Industrial Farm, Burwash	196
Ontario Training School for Boys, Bowmanville	57
" " " " Galt	43
" " " " Girls, Cobourg	36
TOTAL	819

The numbers employed in gaols at the close of the fiscal year were as follows:

City of Toronto Gaol	73
City of Hamilton Gaol	23
County Gaols	287
TOTAL	383

For the purpose of uniformity throughout the Province in City and County Gaols, control is exercised by the Province with respect to appointments, dismissals, salaries, etc., of gaol officers. Provision is also made to permit retiring allowances, pensions and compensation and the following information is submitted to clarify these points:

Appointments and Salaries

Revised Statutes of Ontario, 1937, Chapter 266, Section 388, The Municipal Act, reads as follows and is self-explanatory:

- (1) The Sheriff shall have the care of the county gaol, gaol offices and yard and gaoler's apartments and the appointment of the gaoler, gaol surgeon and other officers of the gaol.
- (2) The appointment and dismissal of the gaoler shall be subject to the approval of the Lieutenant-Governor in Council who shall fix the salaries of every gaoler and gaol officer which shall be paid by the county or city, as the case may be.

Retiring Allowances

Sections 264 and 265, Chapter 266 The Municipal Act, 1937, were repealed and substituted by Chapter 60, Section 35, Revised Statutes of Ontario 1946, which reads as follows:

- 265-(1) A council may grant an annual retirement allowance, payable weekly, monthly or otherwise during his life to any employee who has been in the service of the corporation for at least twenty years and who while in the service has become incapable through illness or old age of efficiently discharging his duties, provided that the retirement allowance and the amount of any pension payments payable to the employee in any year shall not exceed three-fifths of his average annual salary for the preceding three years of his service, or \$2,500.

- (2) Where an employees' pension plan is in operation, this section shall apply only to employees who were in the employ of the municipality on the day on which this Act comes into force and in any event shall not apply to any employee who enters the service of the municipality after the 1st day of January, 1948.
- (3) In this section "employee" shall have the same meaning as in paragraph 41a of section 404.

Payment by Province

Municipalities are reimbursed in part for expenses in City and County Gaols under the Administration of Justice Expenses Act, Section 15 (4) "Other Matters", Schedule "C", which reads as follows:

1. All of the following expenses of criminal justice in so far as they relate to prisoners convicted of indictable offences are payable under sub-section 4 of section 15.
 - (1) Fee to gaol surgeon for the examination of each prisoner eligible for removal to or sentenced to a penitentiary or reformatory.
2. Such proportion of the following expenses of criminal justice as bears the same ratio to the whole of such expenses as the number of days of prisoners who have been convicted or committed for trial on indictable offences bears to the whole number of days of prisoners confined upon all charges during the same period; such proportion to be reckoned from the date of conviction or committal for trial.
 - (1) The maintenance of prisoners including but not so as to restrict the generality of the foregoing, the following:
 - (a) The salaries of the gaoler, matron, gaol surgeon, turnkeys, and engineers or firemen of each county gaol, and the retiring allowances granted to any such officials under The Municipal Act.
 - (b) Clothing, food, medicines and similar necessaries for the prisoners and fuel, light and water, and cleaning material for the gaol.

Pensions

Paragraph 41a of Section 404, The Municipal Act, provides that By-laws may be passed to provide pensions for municipal employees. Under Chapter 39, Section 36, Page 194, Revised Statutes of Ontario 1944, gaol officers may be designated as municipal employees for the purpose of pensions.

Compensation

Workmen's compensation may be granted to gaol employees, providing that the municipality conforms with the requirements of the Workmen's Compensation Board.

In conclusion and on behalf of myself and members of the Inspection Branch, I wish to express to you, Sir, and to the senior officials of the Department, sincere appreciation for the interest and valuable guidance in the work of this branch. I wish also to express thanks to the Superintendents, Sheriffs, Senior Officers and to other Departments for the co-operation and assistance extended during the year.

THOS. M. GOURLAY,

Inspector.

REFORMATORIES

THE ONTARIO REFORMATORY, GUELPH

DEAR SIR:

The annual statistical report of the Ontario Reformatory, Guelph, for the year ending 31st March, 1947, is attached.

During the period covered by this report, 1,480 persons were admitted, which is a decrease of 238 as compared with the previous year. This decrease is explained to some extent by the greater capacity provided at, and the corresponding increase in admissions to, the Ontario Reformatory, Mimico. Of the 1,480 admitted during the year,—

729	or	49.2%	were first	offenders—	an increase	of 8%	over 1946
407	“	27.5%	“ second	“ —“	“	“ 1%	
132	“	9. %	“ third	“ —	a decrease	of 3%	
212	“	14.3%	“ fourth	“ —“	“	“ 4%	
1,480	—	100. %	of these				
881	or	59.5%	were 21 years of age or under,				
242	“	16.4%	“ over 21 but under 30 years of age.				
260	“	17.6%	“ “ 30	“ “ 50	“ “ “		
97	“	6.5%	“ “ 50 years of age.				

Since the opening of the new Reformatory at Brampton our daily average population has been gradually decreased by about 125. Apart from the excellent training received by those young offenders who are being transferred to Brampton from this Institution we are benefitting greatly by making full use of the space made available by the transfers. During the past few months it has been possible to allocate three dormitories to academic training. These rooms are spacious and admirably suited as class rooms. They have been thoroughly renovated and provided with modern furniture and all essential requirements. Additional certificated teachers have been employed, additional subjects have been introduced and it is now possible for an inmate to study senior matriculation subjects or to receive professional guidance in special subjects. All inmates are given educational and psychological tests shortly after their arrival. In all cases where it is found that the individual would derive some benefit from further study he is encouraged to attend class and enter the grade for which he is considered to be best prepared. School classes are conducted throughout all week-day mornings and afternoons, except Saturday afternoons. The policy adopted provides for one-half day academic training and one-half day at vocational training or other suitable employment—depending on the aptitude of the individual. In this way, the number of those given these two forms of training is doubled and as there are few holidays and because there are regular periods for evening study the academic training keeps well abreast of the public school. This claim is justified by the fact that eleven of those who commenced their studies sufficiently early in the term

passed their entrance examinations in June—seven with honours. This by no means represents the total achievement of the school but as the present policy was not put into effect until the school year was well advanced it is not possible to give an exact appraisal of the benefits and progress made by numerous others. It will, perhaps, be of interest to those who read this report, to know that several youths have learned to read and write during the year, others have advanced from one grade to the next and that, with remarkably few exceptions, all have made excellent progress. Senior matriculation subjects have been studied by some who intend to continue their education after release. A number of courses of study have been taken by correspondence with Queen's University. These courses include—first and second year English and first and second year philosophy. In addition to the day classes, our evening classes have continued. At these classes stenography and typewriting, book-keeping and accounting, cleaning and pressing, electricity and barbering are taught.

With the opening of Brampton a Classification Committee was set up, at this Institution, for the purpose of selecting the most suitable young inmates for transfer and training to that newly formed Reformatory. The committee consists of a psychiatrist, a psychologist and the Superintendents of Brampton, Bowmanville and Guelph. The committee sits at intervals of about three weeks and studies each individual together with the case history which has been compiled from information obtained from such reliable sources as the convicting magistrate or judge, probation officers, social welfare workers, his schoolteacher, the Minister of his Church, relatives, doctors or others who are in a position to give valuable assistance to the committee by their knowledge of the subject. During the time this information is being compiled the educational tests and psychological reports are prepared and these also are presented for the benefit of the committee.

From the time of their arrival until they appear before the committee all admissions are accommodated in a wing of the Institution known as the Reception Wing. Here they are specially studied by the Assistant Superintendent and a selected officer is placed in charge. Each of these officials file a report with the committee. Those in the Reception Wing are treated as a separate unit and do not come in contact with the Reformatory population. They are employed as a group.

Those who are assigned by the committee to Guelph are promptly taken from the Reception Wing and interviewed by our employment committee before being allocated to employment. This committee is set up within the Institution and is comprised of the Assistant Superintendent, the Chief Psychologist and the Senior Custodial Officer with the School Principal in attendance and the Employment Liaison Officer acting as secretary. All initial and subsequent changes of employment are dealt with by this committee.

A staff training school was established here by the Department and the first course commenced in November. This course specialized in the training of officers to instruct in physical and recreational training. Consequently, on 2nd January, we were able to commence an extensive programme which includes calisthenics, boxing, ice-hockey, volleyball, floor hockey and basketball. As soon as the weather permits, this programme will be expanded to include

baseball, rugby and many other outdoor games. A full scale sports field is available and it is expected that this will be in daily use throughout the summer months. In this way we hope to foster self-confidence, team spirit and co-operation, a greater respect for rules, self-discipline and a sense of fairness. These important qualities must be developed if we are to succeed in properly preparing these young men for return to their homes and society. Also, there is, perhaps, no better time or place to look for qualities and imperfections than on the playing field.

Following the initial course for Physical Training Instructors, a course was held for the training of custodial officers and since that time courses have been held regularly. The subjects covered by these courses include routine procedure, staff duties, practical aspects of abnormal behaviour, psychology, development of modern penology, identification, problem situations, rehabilitation and after care, organization of the department and kindred organizations, rules of conduct, prevention of crime and delinquency and many others. It is very pleasing, indeed, to realize that this staff training has actually materialized. We look forward to the results of this training with confidence.

Vocational training has been undertaken on a fairly large scale and we now have an increased number of trade-training shops in charge of experienced trade-instructors. Our machine shop has been re-arranged to accommodate a class of fifteen. The same applies to the sheet metal shop. A new shop has been set up for the teaching of motor mechanics to another fifteen and plans are well underway to establish courses in plumbing, bricklaying, painting, carpentry and barbering. These trades added to those which have been carried on for a number of years will give us a total of thirteen trades in all. Production where possible as well as training will be kept in mind at all times. The results of these new courses so far are beyond our expectations. The progress made by some has been almost incredible and it has been necessary to change only a few from the trade initially selected.

As soon as the proposed trades have been established it is the intention to provide short courses on the elementary subjects in agriculture, horticulture, dairying, horse-management and hog raising. These courses to consist of lectures, demonstrations and practical training.

A complete medical report has been compiled by the Medical Officer and is attached as a part of this report.

All industrial departments were in operation throughout the year. The total industrial revenue was \$604,756.45, which is an increase of \$124,133.51 over last year. All of the industrial departments showed an increase, the abattoir and cannery alone had increases of \$69,501.75 and \$29,097.49 respectively.

On the farm, our field crops were not up to average due to poor seasonal conditions although our farm recoveries, amounting to \$65,737.78 shows an increase of \$1,688.03 over the previous year. This increase is due to an increase in the quantity of live stock sold. There were 431 hogs and 14 sows sold, realizing a return of \$15,099.28. Our milk production was 910,914 pounds with a value of \$22,280.47, a slight increase over the previous year. Garden crops amounted to 1,227,554 pounds with a value of \$13,540.84. Field crops had a monetary value of \$10,504.51, a decrease of \$1,683.38 from last year.

We wish to express our thanks to all those who have given their services gratuitously in conducting religious services, providing entertainment in the form of concerts or friendly competition in sports and contributing literature.

We wish also to express our appreciation of the assistance and understanding extended by the Honourable Mr. Dunbar, yourself, the Director, and all those of the Department who have worked with us during the year.

Yours very truly,

G. HEDLEY BASHER,
Superintendent.

MEDICAL REPORT—Year Ending March 31st, 1947

Physical Examination New Men	Mental Examinations	Number on Sick Parade	Number admitted to Hospital Ward	Number of days in Hospital	Average Number of Days Lost
1,540	88	3,718	628	5,417	8.62
No. of Blood Tests Taken	No. found to have V.D.S.	Percentage of V.D.S.	No. found to have V.D.G.	Percentage of V.D.G.	
1,540	53	3.44%	12	.779%	

74 Inmates received treatment for syphilis during the fiscal year.

53 " were admitted during the fiscal year.

21 " were receiving treatment when fiscal year commenced.

61 " had positive blood tests.

11 " had doubtful blood tests.

2 " had negative blood tests, but a positive history of syphilis.

26 of the 74 Inmates gave permission and were given lumbar punctures.

20 had normal spinal fluid reports.

6 had positive spinal fluid reports, one of these was mentally ill and was sent to a Mental Hospital.

10 of the 74 Inmates had their blood reports reversed to negative during their stay here.

24 had improved serology.

40 of the 74 Inmates showed no reverse in their serology.

12 Inmates were admitted during the fiscal year suffering with gonorrhoea. These were readily cured with penicillin. The small number of gonorrhoeal cases admitted during the fiscal year is probably due to the universal use of penicillin which invariably effects a cure in a very short time.

THE ONTARIO REFORMATORY, BRAMPTON

I have the honour to submit to you the first report of the Ontario Reformatory, Brampton, for the year ending March 31, 1947.

The Ontario Reformatory, Brampton, was officially opened on Monday, February 3, 1947, by the Honourable George H. Dunbar, Minister of Reform Institutions. Accompanying Mr. Dunbar were Mr. C. F. Neelands, Deputy Minister, and Mr. A. R. Virgin, Director. Also present was His Worship Mayor Beck of the Town of Brampton.

The Institution is located on a three hundred acre farm, which was formerly operated by the Department of Health. The buildings, which are in use as shop and living quarters for the students, were built during the war years and used as Basic Training centre. The Administration Building is a beautiful brick edifice built in 1937 as the Administration Building for an Ontario Hospital but used during the war years as a Detention Barracks.

These buildings had been vacant for many months but were speedily put back in use and converted into shops and dormitories.

On the opening day thirty-seven boys, ranging in age from eighteen to twenty years were admitted, being transferred from the Ontario Reformatory, Guelph. These youthful offenders are selected for trade training at Brampton by a Committee known as the Selection Board, which is made up of the Superintendent of the Ontario Reformatory, Guelph, the Superintendent of the Ontario Training School for Boys, Bowmanville, the Superintendent of the Ontario Reformatory, Brampton, the Psychiatrist of the Ontario Reformatory, Guelph, and the Psychologist of the Ontario Reformatory, Guelph.

On the opening day three trade shops had been set up, namely Welding, Radio, and Sheet Metal. The second day after arrival the boys were interviewed and registered in courses to their own liking.

Welding Course	6	Radio Course.....	6
Sheet Metal Course.....	6	Cooking Course.....	4

These twenty-two students constituted Course No. 1.

On February 24, the remainder of the thirty-seven boys were registered in Course No. 2.

Welding Course.....	7	Radio Course.....	3
Sheet Metal Course.....	5		

The Machine Shop opened for classes on March 24, with six students. The equipment used in these shops came from the Training and Re-Establishment Institute, London, Ontario.

By the end of March sixty-three boys had been admitted to the Institution. The registration in each course was as follows.

Welding Course	17	Cooking	10
Sheet Metal.....	12	Machine Shop.....	8
Radio.....	11		

Four of the boys had been returned to the Ontario Reformatory, Guelph, as being unsuitable for trade training and one boy had escaped custody.

The following table shows the court record of these sixty-three boys.

Number convicted for the first time.....	41
Number convicted for the second time.....	14
Number convicted for the third time.....	5
Number convicted more than third time.....	3

The educational status of these sixty-three boys is shown in the following table:

Illiterate.....	Nil	College or University.....	Nil
Elementary.....	46		
High School.....	17	TOTAL.....	63

Habits as to use of Intoxicants:

Abstainers.....	41	Intemperate.....	9
Temperate.....	13		
		TOTAL.....	63

Table of Occupations:

Agricultural.....	6	Mechanics.....	6
Commercial.....	20	No Occupation.....	1
Domestic.....	1		
Labourers.....	29	TOTAL.....	63

The offences for which these boys were committed is quite significant:

Assault, Common.....	1	Theft of Cars.....	16
Rape and Assault with Intent.....	1	Taking Car without owner's consent.....	1
House-breaking and Theft.....	3	Larceny or Theft.....	8
Breaking and Entering and Theft.....	4	Receiving Stolen Goods.....	4
Shopbreaking and Theft.....	9	Housebreaking with Intent.....	2
Shopbreaking with Intent.....	2	Carrying Unlawful Weapons.....	3
Robbery.....	5	Unlawful Possession of Gold Ore.....	1
Forgery.....	1	Dangerous Driving.....	1
Shopbreaking.....	1		
		TOTAL.....	63

It is noted that sixteen of the sixty-three or 25.39% were committed for Car Theft.

The dental work carried out on students of the Institution is as follows:

Patients taken to clinic.....	28	Prophylaxis.....	16
Extractions.....	40	Other Treatments.....	4
Local Anaesthetics.....	14	Dentures Repaired.....	2
Fillings.....	40	Other Work.....	1
Pyorrhoea Treatments.....	2		

A part-time physician is employed. In this short period of time there were no serious cases of illness. There were fifty-four boys reported on sick parade and were treated, all for minor ailments.

Religious services are held weekly by the local clergy. Service for those of the Roman Catholic faith are held each Saturday morning at 7.30 a.m.; for those of the Protestant faith service is held on Sunday afternoon. The work of the clergy is gratefully acknowledged.

Two fundamental facts form the foundations upon which this Institution rests. They are (1) Society is built upon integrity and (2) Responsibility is a trust. An earnest endeavour is being made to emplant these two ideas in the minds of these young men. These must be firmly established before these youthful offenders are ready to be set free on the Highway of Life.

In concluding this report I wish to express appreciation for the assistance and co-operation received from the staff, who worked under trying conditions to make the opening of this Institution a success. May I also extend my thanks to the Honourable Mr. Dunbar, yourself, and all members of your Department, who have so kindly given counsel at all times.

J. A. GRAHAM,
Superintendent.

INDUSTRIAL FARM, BURWASH

DEAR SIR:

Attached is the statistical report of the Industrial Farm, Burwash, for the year ending March 31, 1947.

Admissions during the year, 1,049. The number discharged during the year, 1,083. Inmates remaining in custody on March 31, 1947, 766. 38 inmates escaped custody. 37 were recaptured. The average daily population during the year was 753.19.

INMATES	CONVICTIONS	PERCENT
2341 to 3	22.3
5824 to 10	55.49
16411 to 20	15.73
5821 and over	5.53
10	No information regarding previous convictions	.95
		100.00%

Medical:

Attendance at daily sick parade, 7,078. Dressings, 2,001. Inoculations, 2,865. Vaccinations, 1,085. X-ray (Chest), 1,237. X-ray (others), 248. 10 minor operations. 68 major operations. Medical and surgical statistics attached.

During the period ending March 31, 1947, two new physicians, Dr. Hassard and Dr. Reeds, were appointed. The two part-time nurses were replaced by two registered graduate nurses who are employed full time.

In addition, on the hospital staff are two guards who attend the dispensary, take X-ray, etc.

Shortly after arrival all new inmates are given a physical examination, including blood test, chest X-ray and typhoid inoculation is instituted; all new arrivals are vaccinated and, if indicated, other parts are X-rayed. Following this examination, the physician makes his recommendations *re* the inmate's capacity for work. This opinion is of course subject to change in the light of experience and further examination. This Institution is a farm, including logging, and there is a fair amount of heavy work to be done.

The health of the inmates has been reasonably good, with no contagious diseases except a few cases of scabies, about six of fungus infections of feet, and four of trench mouth. Cases of the latter two are isolated during treatment. An extensive epidemic of colds occurred during the month of March.

There is a small bright hospital with eighteen beds, including two private rooms for staff use. Included in this unit are rooms for dispensary, physicians' office, dressing room, operating room, sterilizing room, diet kitchen, store room, X-ray unit and nurses' office.

A well qualified surgeon Dr. R. M. Mitchell from Sudbury, is on call for emergencies and also does elective surgery (approved by the Superintendent).

He visits the hospital three or four times each month, as required, and is also available as consultant on difficult surgical diagnosis.

Anti-syphilitic treatment is given twice weekly, with an average attendance of twenty to thirty. Mapharsen and bismuth subsalicylate are the drugs approved by the Department of Health.

Penicillin is given occasionally to obstinate recurrences of gonorrhoea, and is also available for other infections, where indicated.

Inmates' meals are observed by physician three or four times per week, and are well prepared. The dishes are clean.

The dormitories, wash rooms, etc., are visited weekly and are usually tidy and clean.

Samples of water from each camp are sent monthly for test and have been uniformly excellent.

During the year the Institution was visited by the Venereal Disease Control Office and also by Dr. Lewis of the Department of Psychiatry.

As a result of chest X-ray findings four men were transferred to sanatoria and two others to other institutions for observation.

Six mental cases were sent to Ontario Hospitals. Two epileptics were sent away for treatment, of whom one has been returned, with no improvement.

The dispensary is well stocked with standard drugs, with a reasonable supply of new remedies. The operating room is equipped for ordinary surgery; nothing of a more major character than herniotomies and appendectomies is attempted. Attached is a summary showing activities of this Department.

Staff—Personnel and Public Health:

New apartments are under construction. From a medical point of view, it is felt that small houses or cottages would be more suitable.

Garbage disposal, sewage disposal, milk and water supply are satisfactory.

Most residents depend on the store for their supplies. From a public health standpoint it is recommended that brown bread and sun-wheat biscuits be made available. There are about one hundred pre-school and school age children in the village. Throughout the winter, of vegetables on sale there were always potatoes and usually turnips, but no other vegetable. It is felt that these children should have access to a greater variety of this type of food, in this bountiful province.

The health of the village population has been reasonably good. There was an extensive epidemic of mild measles and four cases of mild scarlet fever (one family). No other contagious diseases were encountered, except three children with stomatitis.

Seven confinements were attended by the staff physicians, of which three were admitted to hospital for various reasons. Details of surgery on staff and personnel may be found in attached summary.

All children in Burwash Village, Estaire and Concession One were offered vaccination against smallpox, diphtheria toxoid and Pertussis Vaccine. With the exception of Concession One Village, almost 100% of them were brought up to date in these protective measures.

All the pre-school and school children in Burwash were offered X-ray chest and complete physical examination, 92 appeared for examination (a few were too young to sit still for X-ray).

Chest X-ray was made available to all adult female personnel and thirty-three presented themselves. No active cases were discovered in children or adult personnel.

Dental Report:

Examinations	1,037	Dentures supplied	82
Extractions	829	Dentures repaired	81
Fillings	376	Denture impressions	184
Treatments	158		

Education:

Summary of Activities During the Period November 1st, 1946, to March 31st, 1947

Classes for illiterates and near-illiterates were commenced on November 12, 1946.

The procedure has been to divide each day—one-half for academic studies and one-half for vocational training.

Illiterates enrolled during period	20
Near Illiterates enrolled	44
Actual school-room attendance (half days)	2,739
Average age of pupils	26.27

A number of inmates, not attending school, have been engaged in home study of a variety of subjects. These have been given the necessary textbooks, materials, direction and all possible supervision.

Correspondence Courses:

A number of inmates who have served with the Armed Forces have been engaged in Canadian Legion Educational Correspondence Courses.

Total taking C.L.E.C. Courses	82
---	----

The Ontario Department of Education has also supplied Correspondence Courses in subjects to Grade 10.

Total taking Department of Education Courses	7
Total number of inmates taking Correspondence Courses	89
Total engaged upon any kind of supervised academic studies	175

The progress of the schoolroom pupils may, in general, be considered satisfactory, and in some cases remarkable.

Individual progress is, with a few exceptions, in direct ratio to the pupil's desire to learn.

The exceptions, four in number, appear to lack the capacity for learning, in spite of diligent efforts.

With an average of attendance 85 half days:

- 15 pupils have advanced 4 grades in reading, writing and arithmetic.
- 20 pupils have advanced 3 grades in reading and writing.
- 21 pupils advanced 2 grades.
- 4 pupils advanced up to 1 grade.
- 4 pupils advanced slightly.

Of the inmates engaged upon C.L.E.S. Correspondence Courses:

Number who have completed Reading Courses.....	8
Number who have successfully written Interim Term Examinations.....	13
Number who have received Achievement Certificates for completed courses (2 in Mathematics and 1 in Mining).....	3

Approximately 15% of the inmates who undertook Correspondence Courses failed to carry them on successfully; the remainder have been progressing satisfactorily.

J. B. McQUEEN-DESMOND.

INMATES EMPLOYED AT VARIOUS TRADES AND OCCUPATIONS

Logging Sawmill and Factory	20	Fuel wood cutting and clearing land	97
Laundry	28	Painters	7
Engineers	38	Blacksmiths	7
Tailor Shop	30	Plumbers	6
Construction and Repairs	30	Kitchen	66
Cattlemen	30	Cleaners, Barbers and Orderlies	78
Farming, Gardening, Greenhouse Lawns:		Quarry and Roads	22
Teamsters	50	Stores and Clerks	9
Garden	59		
Farming, General	30		

It is regretted that I have to report the death of one of our trusted Officers, Guard Carl Fortune. His passing was keenly felt by inmates and Staff alike. Our sincere sympathy is extended to Mrs. Fortune and the family.

Farming and Land Clearing:

- 230 acres of new land broken and ploughed for permanent pasture.
- A number of cement tile culverts replaced the old wooden type culverts.
- New range of 125 acres fenced.

We had the misfortune to lose our dairy barn by fire with no loss of livestock. This barn has been rebuilt on the old foundation.

Marked improvement has been noted in all farm livestock.

Hay, grain and root crops, fair.

Farm returns, \$96,760.85.

Revenue derived from the manufacture of Institution clothing in the Tailor Shop, \$16,293.90.

Lumber and Sawmill Operations:

- Saw logs delivered to the Mill, 22,489.
- Rough and dressed lumber sold, 1,100,205 ft. B.M.
- Revenue, \$22,807.23.

Reforestation was continued with the planting of 50,000 trees; 25,000 Red Pine and 25,000 White Spruce.

A group of 40 inmates were employed on railroad maintenance work for two months.

A programme of recreation was carried through during the year in the form of baseball, picture shows, concerts; also track and field sports. Our new sports field will be ready for use when the 1947 season opens.

The building operations were greatly curtailed owing to lack of material. Four 4-apartment buildings have been completed and are occupied; one 4-apartment building will be ready for occupancy early this summer.

I wish to express my sincere appreciation for the work carried on by the various spiritual advisers who conduct services for the inmates and personnel.

The assistance and encouragement given by the Hon. G. H. Dunbar, yourself and the members of your staff is greatly appreciated by all officers.

Yours very truly,

W. L. McJANNET,

Superintendent.

ONTARIO REFORMATORY, MIMICO

I have the honour to submit the annual Statistical Report for the Ontario Reformatory, Mimico, Ontario.

During the fiscal year ending March 31, 1947, a total of 2,111 persons were committed to this Institution, an increase of 927 over the year ending March 31, 1946. Of the Commitments:

1,549	or	73.33%	were for	Breaches of Liquor Control Act.
199	"	9.47%	" "	Petty Theft.
363	"	17.20%	" "	Offences of Minor Nature.
2,111		100.00%		

Duration of Sentences:

1,238	or	58.65%	3 months or Less.
806	"	38.18%	3 months to 6 months.
67	"	3.17%	6 months to 18 months.
2,111		100.00%	

Most of the short-term admissions were chronic alcoholics, some having been admitted from three to six times during the year so that the figure of 2,111 admissions does not represent that many individuals. The large increase in admissions is partly due to an effort to relieve overcrowding at the Toronto Gaol.

The number of inmates remaining in custody on March 31, 1946, was 253. There were 7 persons readmitted from gaols and other institutions and 1 parole violator readmitted making a grand total in custody during the year of 2,372. Of the 7 inmates who escaped custody, 6 have been recaptured.

Medical:

The health of the inmates has been fairly good. There were no serious accidents or epidemics. One inmate died of coronary thrombosis. Many are found to be suffering from the effects of long periods of over indulgence in alcohol and because of this, lack ambition. It may take days or even weeks for these men to recover their appetites and to be fit for participation in a work programme. The attending physician at this Institution was Dr. W. B. Snider. The following is a summary of medical treatments, etc., for the year:

Attendance at sick parades.....	29,172	Sputum examinations.....	24
X-Ray Examinations—chest.....	23	Admissions to hospitals.....	17
Other X-Ray Examinations.....	51		

Wassermann Tests were performed on all those committed.

Dental:

The dental requirements of the inmates were taken care of by Dr. E. B. Sisley of the Ontario Hospital, New Toronto, until March, 1947, when our dental clinic was re-established on a part-time basis under the direction of Dr. P. Pearan. The following is a summary of dental treatments, etc., for the year:

No. of Examinations.....	132
No. of Extractions.....	76
No. of Dentures Supplied.....	0

Some of the Army buildings constructed to house German Prisoners of War have been taken over by this Institution. Although this arrangement makes it possible to accept some of the prisoners from the Toronto Gaol, and relieve to some extent the overcrowding there, it is not entirely satisfactory. Accommodation is taxed to the limit and with the men sleeping in dormitories, there is little possibility of classifying prisoners according to age and type.

It is recommended that in instituting its new programme of training, instruction, education and recreation, the Government should consider the erection of permanent buildings to prevent the aforementioned overcrowding. Also great stress should be placed on the construction of such buildings that proper segregation of prisoners may be carried out. Some alteration in the present main building could be effected to advantage.

In August, 1946, the Military Camp on the grounds of the proposed Ontario Hospital, Brampton, was returned to the Department of Public Works. Under the supervision of officials of the Department of Public Works, a party of inmates from this Institution in charge of Sergeant A. A. Kennedy was located in the Military Hospital Building to raze temporary structures, salvage valuable building materials in short supply and restore the grounds. This worked very well and much valuable material was salvaged and shipped. However, later in the year work was stopped and the remaining buildings were altered to provide a nucleus for the Ontario Reformatory, Brampton. A party of 80 inmates are at present engaged in removing foundations, clearing debris and restoring the grounds.

A shoe repair shop has recently been opened. Under a competent instructor valuable instruction in repairing boots, rubbers and leather mitts is being given. Later, with the addition of some machinery, it is hoped to make slippers and possibly later on work boots. A number of older inmates unable to do heavy work are doing some useful work in this shop.

Farm crops were very good. The month of July was hot and dry but good early growth withstood this. From our small farm the following production is interesting:

	AMOUNTS	VALUES	
Grains.....	1,580 Bus.....	\$1,141.00	
Hay and Straw.....	150 Tons.....	1,310.00	
Roots.....	110 ".....	660.00	
Vegetables.....	85 ".....	1,770.00	
Potatoes.....	83 ".....	1,660.00	
Ensilage.....	35 ".....	175.00	
	TOTALS.....	\$6,716.00	Institution Prices

Farm products sold, supplied to the Kitchen and other Institutions:

	AMOUNT	VALUES	
Milk.....	269,592 lb.....	\$8,671.74	Market Prices
Eggs.....	6,892 doz.....	2,683.65	Institution Prices
Chickens @ 35c. lb.....	797 only.....	1,192.36	
Hens @ 25c. lb.....			
Hogs.....	258 only.....	8,788.13	Market Prices
Vegetables.....	141 Tons.....	932.21	Institution Prices
	TOTALS.....	\$22,268.09	

Our Holstein Herd averaging 40 in number, under the care and supervision of Mr. Gordon Scott, our farm superintendent, is showing much promise.

Last year our own bred and raised cow, Ormico Reta Roberts, won the world's championship for milk production, 35,207 lbs., any breed and any number of times daily milking for a 365-day lactation period, and is again on the way to a fine record.

Due to rebuilding operations and numerous breakdowns in our mill, industrial production for the year was low:

	AMOUNT	PER M	VALUE
Common Brick	755,000	\$ 17.00	\$12,835.00
Tapestry	445,000	25.00	11,125.00
Floor and Wall Tile	17,000	40.00	680.00
Structural Tile	60,000	4" x 12" x 12" 82.00	4,920.00
	25,000	3" x 12" x 12" 75.00	1,875.00
	1,000	8" x 12" x 12" 150.00	150.00
Agricultural Tile	22,000	4" 22.00	484.00
	4,000	6" 45.00	180.00
		TOTAL	\$32,249.00

It is gratifying to have the work progressing on the new mill. During the winter much preliminary work such as excavations and laying foundations was performed. If no undue delay is encountered in securing materials, good progress should be made during the summer.

We are very grateful to the Salvation Army and Rev. Father McGrath, who, during the year provided religious services and spiritual guidance for our inmates, and the Salvation Army for furnishing movies and entertainment.

In conclusion, I wish to thank the Honourable Mr. Dunbar, yourself and staff for kindly counsel and consideration during the past year.

Yours sincerely,

J. R. ELLIOTT,

Superintendent.

MERCER REFORMATORY, TORONTO

DEAR SIR:

I have the honour to submit the report of the Andrew Mercer Reformatory for the fiscal year ending March 31, 1947.

From the attached statistical report a summary of the numbers committed and released is given as follows:

Committed during the year	309
Discharged on expiration of sentence	215
" by ticket-of-leave.....	2
" " Parole Board	90
" " payment of fines	14
Transferred to Hospitals for Mentally Ill	7
" " Sanatoria	2
Deported	1
Died	1

On admission to the institution each inmate is given a complete physical examination and is assigned to work only in accordance with our Medical Officer's report as to her fitness. The excellent medical and dental care help in great measure, along with the provision of well cooked and nourishing food, to build up and maintain generally a very good standard of health. The medical work is under the direction of Dr. W. H. Hills and we have three Registered Nurses. Constant vigilance and early segregation in cases of sickness kept preventable illness under control, and there was no epidemic of any kind. Very few cases required to be removed to a general hospital, and those few were mostly for surgical operation. The one death that occurred was from natural causes.

The following is a summarized report of the medical work:

Physical examinations	367	Lumbar punctures	41
Pelvic examinations	533	Penicillin	192
Blood tests	610	Sick parade	11,639
Mapharsen	1,193	Vaccinations	48
Bismuth	804	Intelligence Tests	193
Bismarsen	108	Mental examinations...	18

Warm commendation is given also to our Dentist, Dr. H. F. B. Black, for his expert and ever conscientious work. This was Dr. Black's first complete year with us since his return from Active Service.

A summarized report of the dental work is as follows:

Patients seen	949	Fillings	141
Examinations only	354	Treatments	197
Public charges	595	Prophylaxis	43
Extractions	231	Dentures.....	18
Local anaesthetics	186		

Thirteen babies were born during the year. As soon as possible after expectant mothers are received here, they are taken to the pre-natal Clinic at the Toronto General Hospital and their cases are, therefore, already on record at the hospital when they are transferred there for their confinement.

The mother returns here with her babe when hospital authorities give permission for them to leave. In filling in the form registering a birth, no mention is made of the Reformatory or of this address on King Street, and the child is saved from at least that stigma.

The factory provides the maximum number of inmates with training for gainful occupation and some of those trained here in operating power machines, and who have returned to the community outside, are earning \$28.00 a week. Others who were trained in laundering and housework are likewise well employed outside. The Matron who supervises the painting of the inside of the building by inmates during the winter months takes over part of the care of the garden as early in the year as the weather permits. She does this under the direction of our Gardener, and from eight to ten inmates are kept busy in the sowing of seed, weeding, tending the lawns, etc. The garden provides the institution with all the early vegetables, and quite a good supply for winter use.

The reports of our discharged women and girls who are doing well are encouraging, as against the disappointing ones of those who while working satisfactorily in the institution have no stability and just drift back to their old ways when they no longer are under direction. Considering the conditions in the homes of some of those unfortunates and the lack of any incentive there to do better, it is not surprising that without supervision they cannot maintain the improvement begun here. After the most formative years of their lives have been spent in homes that all too often are entirely lacking in any of what are generally accepted as essentials toward the development of good citizens, it is scarcely reasonable to expect that the bad results of those years can be righted in six months, more or less (too often, less), and that reformation in the moral and physical state is likely to be achieved in the comparatively short periods of training our girls have here. Human nature, being what it is, does not take so readily to the upset of the urge to change habits that have become fixed and comfortable. Our wish to help and befriend them usually brings some response from those in our care, and we do our best to encourage them in any attempt at betterment.

Discipline has been good, and this I attribute largely to the regular employment of all inmates who are in good health, eight hours a day in one or another of the institutional activities. The policy of depriving miscreants of privileges for some time, rather than punishment that may be more severe but quickly over, continues to prove effective in any obstinate cases of misbehaviour. Most inmates are amenable to advice, and generally realize that good conduct brings its reward in various ways.

As in previous reports, I would protest the sending here of those who are mentally ill, mentally defective, incapable, and those who are too advanced in years to be able for ordinary labour. It is extremely unfair to them, and having them here is definitely upsetting to discipline.

Some most enjoyable concerts were given here during the year. A few plays were put on very successfully by some of the girls who showed a surprising degree of talent in character acting, in costume and parts far removed from every day life in an institution, to the great delight and merriment of their fellow-inmates who made an enthusiastic audience. Other greatly appreciated entertainment was provided through the generosity of Church organizations,

the Salvation Army and Service Clubs. At all those entertainments the inmates' pleasure was warmly expressed, and we all feel very grateful to the friends of the institution who gave so much cheer.

It gives particular satisfaction to report that The Public Library Board of Toronto authorized Mr. C. R. Sanderson, Chief Librarian, to establish a branch library in this institution. Mr. Sanderson has been most helpful in the matter, as we are deeply indebted for such a valuable contribution to our facilities for pleasure and education.

I hope that in the near future our recreational programme will be in full swing. It is quite necessary for the person charged with this responsibility to have a high degree of leadership. An institution of this kind presents somewhat different problems from those encountered by the recreational directors in most civilian situations.

Mr. Elliott, Superintendent of the Ontario Reformatory at Mimico, has been kind and co-operative as always and he was good enough to send workers on various occasions, one job being to grade our driveway and surface it with crushed stone.

The outside of the building still is in need of the repairs mentioned in last year's report as being necessary.

Religious training is a vital necessity, and we are grateful to all the teachers of religion for their faithfulness in coming and their help in the work we are trying to accomplish.

I am not unmindful of the fact that the management of the institution is dependent upon the united efforts and loyal support of all associates in the work and I am deeply indebted to all those, in whatever office, who have responded to this spirit. To you, Sir, and the officials of the Department, I express sincere appreciation.

Yours very truly,

J. MILNE,

Superintendent.

ANNUAL REPORT OF THE ONTARIO BOARD OF PAROLE**For the Year Ending March 31, 1947**

The conditional release of inmates from the Reformatories in the Province of Ontario is the task of the Ontario Parole Board. This means that many homes must be inspected and offers of employment examined in order that those to be released may have a good chance of becoming re-established in the social and industrial life of the Province. The supervision of Parolees, once they are established is a factor of supreme importance because it insures guidance and direction to the Parolees at a critical time in their rehabilitation period.

In the selection of those applying for parole, there are many determining factors. Among these factors that are important are the following:—type of home and possible parental guidance; ability to secure permanent employment; previous work record; desire to continue education, either academic or vocational; type of offence committed; record of offences; conduct and work record in the Reformatory; attitude to his or her rehabilitation. All these factors are taken into consideration by the Board of Parole before granting or refusing a parole.

There are two problems confronting the Board at this time which it feels call for serious consideration. The first is that which has to do with those guilty of sex offences appearing before the Board. If, as has been suggested, sex offenders are found to be afflicted with a mental disease, it is readily apparent that the Parole Board are not in a position to give conditional release to such inmates and that the Courts are inadequate to deal with such cases at the present time under the existing provisions of the Criminal Code. It is, therefore, suggested that a study be made of this class of offender in order that provision be made for such treatment as may be found necessary.

The second problem that confronts the Board and that demands consideration is that of the so-called Alcoholics who receive short indefinite sentences and thereby present themselves for possible parole. There is little that can be done of a permanent nature for these alcoholics unless some special treatment is forthcoming. It is, therefore, humbly suggested that the problem of alcoholics be considered and a solution sought to the end that a greater number may become established in society and in the industrial life of our country.

The Personnel of the Board was changed during the fiscal year. Mr. R. A. Jeffery, of Arnprior, Ontario, a very valuable member of the Board, resigned. The Board regretted his resignation. Mr. Arthur E. Maloney, Barrister of Toronto, was appointed a member of the Board. The Board of Parole is composed of the following members:—Mr. G. M. Dix, Chairman; Mr. J. P. Balharrie; Mr. W. R. McConnell; Lt.-Col. W. A. Bunton; Mr. A. E. Maloney and Miss Sadie Melrose.

During the past three years the Board of Parole has interviewed all applicants for Ticket-of-Leave at the request of the Department of Justice, Ottawa, Ontario. During the fiscal year, 1,364 inmates in the various Provincial Reformatories were interviewed, who had made application for Ticket-

of-Leave. The Board's observations and relevant material were submitted to the Department of Justice.

Many ex-prisoners of gaols and other penal institutions call at the Parole office for assistance, guidance and advice. A great number were helped by being given lodgings, employment secured, transportation provided to employment, meals, tobacco, etc., through the Prisoners' Rehabilitation Fund.

The Board is indebted to the officials and officers of the Ontario Provincial Police, to the Chief Constables throughout the Province, to the National Employment Service, Welfare Organizations and to the Salvation Army for the splendid assistance given. The Board, also, wish to express their indebtedness to the Service Clubs and Social Agencies who have given excellent co-operation.

GEO. M. DIX,

Chairman.

THE SALVATION ARMY

REPORT OF PRISON, GAOL AND POLICE COURT WORK IN ONTARIO

For the Year Ended December 31, 1946

The problem of the restoration of the fallen individual is age old and is still one of the greatest in the world. Thoughtful men and women from all walks of life have tried to find a solution but in spite of all that has been done it still presents a great challenge to Society.

How the Salvation Army is trying to meet this need is outlined in the following report:

Preventative Work

All will agree, I am sure, that the best time to save anyone is before that one commits their first crime.

First offenders when brought before Magistrates are the special object of our Officers' care and attention, and a large number are handed over to us by the Courts each year.

Our Officers pay special attention to the home and family, giving advice and help where this is necessary because we realize that 99% of our major crime can be traced back to the home.

We have a number of homes for boys and girls situated throughout the Province. All with but one idea in mind—to restore where needed, then build, when possible, right ideals of Christian Character.

Prisoners' Welfare Work

It is recognized that in respect to law breakers the real sufferers are the wives and children, and our first thought must be for these innocent victims of crime and its consequence. We have Officers in practically every City and Town in the Province who are always ready to call at the Courts or homes and will make a determined effort to alleviate any condition of need that may be found.

The man who has been sentenced is not forgotten, but is visited regularly, services are conducted, and no effort is spared on our part to try and effect a permanent reformation on the part of the one convicted.

We as Salvationists believe that this can best be done through the power that motivates our Officers, the personal acceptance of Christ as Saviour and Lord. It is this alone that can still "break the power of cancelled sin and set the prisoner free."

After Care Work

Another phase in our endeavour to help is the after care. We receive from Wardens of each Institution a monthly list of dischargees and where possible make plans to receive these individuals in an effort to rehabilitate them.

Where necessary they are met at the gate of the prison or railroad station, taken to one of our homes or Institutions, cared for until they can make their own arrangements, work found, where this is possible, and often reconciled and restored to their families.

We put on record our gratitude and thanks to Superintendents and officials of the various Institutions, also, to Magistrates and Crown Attorneys for their sympathy and help in cases where they feel that mercy can wisely be extended. I want to refer to the consideration shown by the officials at the Parliament Buildings. Honourable George Dunbar, C. F. Neelands, also, Honourable Leslie Blackwell, the Attorney-General and others, who give us the opportunity to be of service.

While we are dealing each day with the worst characters The Salvation Army still maintains that there is no character so bad or gone so far in wrong doing but that he can be influenced to become the man he originally intended to be.

REPORT OF PRISON AND POLICE COURT AND GAOLS WORK
For the Province of Ontario, Year Ending December 31st, 1946

Visits to Gaols, Prison and Police Courts, including visits when services are held	5,363
Interviews with men.....	21,728
Religious Services conducted in Prison and Gaols.....	1,415
Men handed to The Salvation Army, met on discharge or who have come direct to the Prison Office	1,312
Meals and Beds supplied free.....	16,782
Letters written, or calls made by phone in order to bring about reconciliation or secure employment for discharged men	16,767
Visits to homes, also prospective employers on behalf of prisoners.....	5,466
Employment secured, returned to former jobs or sent back to friends or parents mostly from the Police Court.	1,275
Number provided with clothing	1,060

**PRISON AND POLICE COURT WORK IN THE PROVINCE OF ONTARIO
STATEMENT OF INCOME AND EXPENDITURE**

For the Year Ended December 31st, 1946

TO EXPENDITURE:		BY INCOME:	
Assistance to Prisoners and Dependents	\$4,763.25	Grants:	
Expenses of officers engaged in prison and police court work:—		Province of Ontario..	\$7,500.00
		City of Toronto.....	2,000.00
		Donations	630.60
TORONTO:			
Head Office—salaries, rents, office expenses, travelling, etc.	3,004.20		
MEN'S SECTION, TORONTO:			
Salaries.....	\$2,764.70		
Rents.....	740.00		
Incidentals.....	1,265.49

KINGSTON:			
Salaries.....	636.25		
Incidentals.....	328.94		
	<u>965.19</u>		
		Deficit	9,882.99
	<u>\$20,013.59</u>		<u>\$20,013.59</u>

AGRICULTURE — an important feature of an Institution program, providing food for the table and healthful outdoor activity for the inmate.

Some must work close to the soil . . .

while others will work with horses . . .

but the mechanically minded will prefer mechanized power

THE PRODUCTS OF AGRICULTURE . . .

grain and milk . . .

poultry and pork . . .

fruits and vegetables

MEDICAL AND DENTAL SERVICES — treatment and care, the first steps towards the "goal" of REHABILITATION.

Medical Examination

Dental Check-up

Blood Test

Minor Repairs

In the interest of economy, old type equipment which is still serviceable must be used until replaced with modern equipment. Just one phase of the Department's far-reaching plans for Penal Reform.

Dining Hall, Mercer

Corridor, Mercer

Kitchen, Mercer

Kitchen, Mimico

All types of equipment will be found in Reform Institutions, from temporary army huts at Brampton to ultra-modern cells at Guelph.

Washroom, Guelph

Dining Hall, Guelph

Temporary Army Hut, Brampton

Dormitory, Mimico

Modern Cell, Guelph

READJUSTMENT TO NORMAL LIFE may require introduction to a trade. All practical trades are covered by carefully selected and competent instructors.

Welding

Circular Saw

Triple Sander

Mortising

Electric Drill

Metal Working

As conditions show the need, new features are added. To the well-established trades of carpentry, metal working, tinsmithing, masonry, electrical work, etc., RADIO has been added.

Sheet Metal Working

Shoemaking — the Stitcher

Radio

At Mimico, bricks and tiles are made from clay and shale, dug from the pit

Dressmaking and Power Operating are just two of the practical courses for women, as well as laundry work and cooking.

The Factory, Mercer

The Laundry, Mercer

The Laundry, Mercer

Just one of many accomplishments at Guelph . . . blankets from raw wool

The EDUCATIONAL program and supervised RECREATION and PHYSICAL TRAINING programs have one aim . . . a healthy disciplined mind and body.

ANNUAL REPORT UPON THE GAOLS OF ONTARIO

REPORT OF THE DEPUTY MINISTER

TO THE HONOURABLE W. A. GOODFELLOW,
Minister of Public Welfare.

Sir :

The undersigned has the honour to submit herewith the Sixteenth Annual Report of the Department of Public Welfare.

Included in the statement covering all departmental activities are reports of the Mothers' Allowance Commission, Old Age Pensions Commission, and the Superintendent of Neglected and Dependent Children, together with supporting statistical data, for the fiscal year April 1st, 1946, to March 31st, 1947.

All of which is respectfully submitted.

B. W. HEISE,
Deputy Minister.

PART I

IN REVIEW

The Department of Public Welfare is responsible for the implementing of legislative measures designed to assist the citizen in certain circumstances of social and economic need.

The Department of Public Welfare Act of 1931 provided for the consolidation within one Department of social legislation which, up to that time, had been administered by several Departments of the Government.

Administration of various statutes in respect of Child Welfare, Charitable Institutions and Houses of Refuge, together with administration of the Soldiers' Aid Commission Act, was transferred from the jurisdiction of the Provincial Secretary's Department to the new Department of Public Welfare; and the latter likewise took over jurisdiction for the Mothers' Allowances Act and the Old Age Pensions Act from the Department of Health.

At a later date the Unemployment Relief Act was transferred from the Department of Labour.

Further legislation for social problems assigned to the Department include the British Child Guests Act, the Day Nurseries Act, the District Homes for the Aged Act, and the Homes for the Aged Act.

Public Welfare legislation in Ontario falls into four main categories, with a somewhat complex pattern of financial and administrative responsibilities. These may be briefly classified as follows:—

(1) Legislation based on joint Dominion-Provincial arrangements, as exemplified in the Old Age Pensions Act. Old Age Pensions and Pensions for the Blind are administered by the Province in conformity with Dominion Regulations.

(2) Legislation for Welfare measures for which the entire financial and administrative responsibility is assumed by the Province, such as the Mothers' Allowances Act.

(3) Statutory measures providing for joint Municipal-Provincial responsibility, as exemplified by the Unemployment Relief Act and the Houses of Refuge Act.

(4) Legislation in respect of privately administered welfare services receiving Provincial aid and coming under Provincial supervision, such as Children's Aid Societies and Charitable Institutions.

The very nature of welfare services, concerned as they are with the well-being of the individual and the family, demands the closest of co-operation among all whose desire or responsibility it is to assist their fellow man. The Provincial responsibility, in this respect, becomes more complex in Ontario because of its large and varied geographic area. The Province of Ontario constitutes one of the largest geographic areas of administration at this level of government in the world.

The social circumstances in the community may conspire to shift the emphasis from the problems of the child, to the adult or the aged. Flexible administration is essential to enable the government to cope with such situations. This suggests that the level of government closest to the family—namely, the municipality—is in the most favourable position to give the best service. It is possible that the expanding nature of a state administered social welfare programme would call for a form of decentralization of authority on the part of the Dominion and the Province.

The various categories of welfare legislation outlined above may be regarded as different approaches by the government to the problems of society as they threaten the security of the family and its individual members. Considered in this light, the work of this department may be reviewed as follows:—

THE CHILD

DIVISION OF CHILD WELFARE

Children's Aid

Children's Institutions

Day Nurseries

MOTHERS' ALLOWANCES

THE ADULT

UNEMPLOYMENT RELIEF

SOLDIERS' AID

PENSIONS FOR THE BLIND

THE AGED

HOUSES of REFUGE and HOMES FOR THE AGED

OLD AGE PENSIONS

THE CHILD

THE DIVISION OF CHILD WELFARE

Child Welfare Services of the Department are combined in the Child Welfare Division.

Through the co-ordination of these services it has been possible to plan for the welfare of children more effectively. The Division is responsible for standards of supervision and care as indicated by the following report :

CHILDREN'S AID BRANCH

Through the Children's Aid Branch the work of the fifty-three Children's Aid Societies is supervised and co-related. These Societies are governed by local boards of directors selected from the citizens in the community. They are autonomous and employ their own staffs of social workers.

Child Protection :

Child Protection services place the emphasis on the prevention of neglect and deal with basic family problems at their source. Every effort is made through Children's Aid Societies to re-establish the home rather than to remove the child.

During the past year 20,214 children were involved in protection cases in which the Societies were called upon to give service, a decrease of 1,596 from the previous year. Separation of parents and marital discord proved to be the largest contributing factors leading to child neglect and requiring services of the Societies.

The superintendent of the local Children's Aid Society acts as a local representative of the Provincial officer in the administration of the Children of Unmarried Parents Act. Any mother of a child born, or about to be born, out of wedlock, may apply to him for assistance. The services provided have been helpful in the re-establishment of these young women, who are usually in need of advice and guidance. The Society assures itself that the child is given adequate protection and care. An increasing number of these cases is brought to the attention of the Societies by the mother, her relatives or interested citizens before the child is born; thus enabling a plan to be made for both mother and child well in advance.

The number of cases dealt with under the Children of Unmarried Parents Act continues to increase. This increase has continued since 1939-40, when there was a total of 2,356 cases compared with 3,250 cases for the year 1945-46. Once again there is a further increase of 339 cases, or a total of 3,649 for the past year.

Adoptions :

The number of adoptions completed has continued to increase, a total of 2,075 children having been adopted during the past year, an increase of 27 from the year previous. Continued confidence in the Children's Aid Societies in the matter of adoptions is evidenced by the increasing number of prospective adoptive parents who seek their advice and guidance in the selection of a child for adoption.

Child Care :

Despite the housing shortage and economic difficulties, 7,346 children were in care in boarding homes at the end of the present year, an increase of 631 compared with the previous year. Sixteen thousand and forty-two children were provided with care outside their homes, an increase of 1,020 over the previous twelve months.

There has been increasing difficulty in the satisfactory placing of children. There are indications that a greater number of replacements were made. This suggests the need for more intensive foster home investigations. The integration of the institutional and the foster home care program in an effort to provide the type of care most appropriate to the needs of the child might also prove beneficial.

War Services :

The Societies rendered a distinct service during the year in the re-adjustment of war veterans and their families. Nine hundred and eighty-six such families were assisted in co-operation with the Dependent's Allowance Board, involving 5,108 children.

The assistance provided by the Dependents' Board of Trustees was made available to another 3,800 families upon recommendation by the Societies.

Financial :

The increasing cost of living is reflected in the budgets of the Societies. Expenditures during the year increased by \$330,116.19.

DAY NURSERIES BRANCH

The past year has been a period of transition from a war-time basis to a peace-time basis for Day Nursery activities. Surplus equipment was made available to Child Welfare and educational agencies, and preparations were made for the future licensing of all day nurseries.

The Day Nurseries Branch continued to operate 28 war-time day nurseries and 41 day care centres, financed under the Dominion-Provincial Agreement, until June 30th. This program was replaced by one established under The Day Nurseries Act, which became effective June 30th, 1946. The Act provided for :

- (a) A provincial grant of 50% of the net operating costs for Day Nurseries operated under a municipal by-law by municipalities who agreed to be responsible for the financing and efficient operation of the nursery.
- (b) The licensing of all day nurseries.

On June 30th assistance from the Dominion and Provincial Governments for the operation of the day care centres was discontinued.

The following municipalities immediately passed by-laws to establish day nurseries in their area :

Toronto	(13)
Hamilton	(2)
Brantford	(2)
Scarboro	(1)

On July 31st the Township of Scarborough decided to discontinue the day nursery, and on August 31st one of the Brantford nurseries was closed.

The equipment from all the Day Nurseries and Day Care Centres which were closed, became the property of the Provincial Government. Arrangements were made whereby it could be sold at a fair evaluation to child welfare and educational agencies and institutions. The following table shows the extent to which this equipment was distributed :

15 community supported nurseries
10 co-operative nurseries
1 university nursery school
13 private nurseries
15 municipally-operated nurseries
9 private children's institutions
1 provincial children's institutions
17 Sunday schools
6 Boards of Education
1 children's hospital
1 public library
3 private children's camps
1 provincial children's camp

The disposal of this equipment afforded an opportunity for advising a number of private day nurseries regarding their equipment and programs as a preliminary to the actual licensing of such nurseries. Many requested an immediate inspection of their premises and programs.

Arrangements were completed to transfer the staff, formerly employed by the Province under the Dominion-Provincial Agreement, into suitable positions where they have continued to give leadership in the day nursery field.

BRITISH CHILD GUESTS

The majority of British Child Guests have now been safely returned to their own homes. During the year the number under supervision decreased from 113 to 37. In addition 16 privately evacuated children receive some measure of supervision. Most of the remaining children are continuing their education in college, showing marked proficiency in their studies. Practically all these young people intend to remain in Canada. The children in care of Canadian foster parents are now privileged to take advantage of certain scholarships arranged in Great Britain on their behalf through a special fund established through contributions of the children's parents and known as the Kinsman Trust.

Number of British Child Guests September, 1940	624
Total number of children who had returned to the United Kingdom up to March 31st, 1945	115
Total number of children returned during 1945	429
Total number of children during 1946	6
<hr/>	
Total returned as of March 31st, 1947	550

CHILDREN'S INSTITUTIONS

There were 41 Children's Institutions designated as such under the Charitable Institutions Act in the year under review.

An increasing interest in planning a modern child care programme has been shown by the boards of many children's institutions. There is a trend to arrange for the intake and discharge of the children in care on the recommendation of an organized social agency working in the community.

An increasing tendency to study institutional populations in order to determine the future needs of the children seems to be evidenced. There also appears to be more definite co-operation between institutions attempting to give very essential specialized services. This procedure has been handicapped by lack of trained personnel. In a partial attempt to meet this need for trained staff, the Institute of Child Study, University of Toronto, organized a Superintendent's Institute. A number of superintendents of children's institutes throughout the Province took advantage of this course of instruction and expressed a desire for further institutes and courses of training for institutional personnel.

The per diem costs of all institutions average \$1.08. The year's expenditures for all institutions totalled \$1,136,788.20 covering 1,054,680 days care.

An increase of 66,534 days care was given over the corresponding period of the preceding year. Maintenance costs increased \$117,081.12. At the end of the year, 2,856 children were in care, compared with 2,824 children at the end of the year previous.

MOTHERS' ALLOWANCES

(THE MOTHERS' ALLOWANCES COMMISSION)

The work carried on under the Mothers' Allowances Act is entirely provincial in its legislative, administrative and financial aspects. The purpose of the Act at its inception was to help provide for the widowed mother and her child. Late amendments, however, have enlarged the area of assistance to include deserted wives, mothers whose husbands are permanently incapacitated and foster mothers who have in their care orphaned children. Widows and their children, however, still comprise the largest group receiving assistance.

At the outset the municipal government participated in the financing of allowances. Since 1937, however, the Ontario Government has paid the entire cost of administration and allowances granted. Such allowances, apart from the basic grant, include fuel—when required—medical care, plus an additional amount of \$10 where there are exceptional circumstances.

All disbursements for Mothers' Allowances are paid from the general revenue fund of the Province. This form of assistance constitutes the second largest welfare activity in the Province in terms of amount of money spent and the number of persons receiving aid.

Over the period of the last 26 years a total of \$80,655,274 has been granted to families under the Mothers' Allowances Act. Allowances paid during the current year total \$3,291,408.57. The average monthly allowances paid to beneficiaries increased from \$41.91 to \$42.20 during the year. Expenditures for the fiscal years 1945-46 and 1946-47 are graphically illustrated for comparative purposes in Chart II below.

Chart Number II

Obligations incurred for Mothers' Allowances during the fiscal years
1945-46 — 1946-47

On the investigator's recommendation and at the discretion of the Commission, many beneficiaries received an additional allowance to provide for dental treatment and other items of an emergent nature. In addition to free medical services to all beneficiaries, a total of \$84,259.69 was issued for the purchase of fuel during the winter months.

During the fiscal year 1938-39 some 12,242 mothers and foster mothers received allowances—this being the peak load in the history of the Act. However, since that time there has been a continual decline in the case-load, and at March 31st, 1947, the number of beneficiaries receiving allowances was 6,587. For comparative purposes, this decrease in the case-load is illustrated in Chart III below.

Chart Number III

Mothers' Allowance — Beneficiaries at end of each fiscal year

The total number of individuals including the mother or foster mother, and children benefiting from the allowance as of March 31st, 1947, was 20,323. Of the total number of mothers receiving the allowance, 71% were widows with dependent children; 21% were mothers whose husbands were incapacitated, and 4% were deserted mothers.

During the year under review, the number of applications received showed a 2.5% increase over that of the previous year, of which 51.07% qualified and received an allowance.

With regard to cases involving incapacitation of the husband, pulmonary tuberculosis is the largest single contributing factor.

This welfare measure recognises the vital importance of maintaining the family as the social unit best qualified to care for the child, rather than accepting the alternative arrangement of separating the mother and child.

THE ADULT

UNEMPLOYMENT RELIEF

The administration of Unemployment Relief is primarily the function of the municipal level of government. Accordingly, the municipality is responsible for determining need and providing funds to alleviate distress in individuals who are without resources, and do not qualify for special categories of assistance. Municipalities are reimbursed by the Province to the extent of 50% of their expenditures for the relief of unemployable persons.

Municipalities received \$1,342,900 from the Province during the past fiscal year; \$165,369 more than the previous year's total. The shareable relief expenditures on a comparative basis follow.

GROSS RELIEF EXPENDITURES FOR THE PAST THREE FISCAL YEARS

	1946-47	1945-46	1944-45
Provincial totals*	\$ 2,826,605	\$ 2,492,426	\$ 2,252,100
Provincial share*	1,483,705	1,314,895	1,182,816
Municipalities' share	1,342,900	1,177,531	1,069,284

*—Includes cost of relief rendered persons living in unorganized areas.

The unprecedented employment conditions in recent years left only a residue of cases in needy circumstances. In the course of the great depression of the thirties loss of income could be mainly attributed to unemployment. When this temporary condition occurs at the present time, Unemployment Insurance benefits are in a large proportion of cases available to cushion the shock, and the municipalities have not, save in a few instances, received applications from unemployed employable persons.

An increasing number of persons over the age of 60 years require relief and, in the nature of ailments attendant on advancing age, the problem of providing care is accentuated. The aged person without resources must rely on public assistance through municipal channels until he attains the age of 70 years. This group suffers from chronic illness relating to the circulatory system; senility and general debility; rheumatism and arthritis; to mention the prominent causes of ill-health. More than half the heads of families and single individuals receiving relief are over 60 years of age.

In all age brackets, illness and physical disabilities are the major reasons for the granting of relief, and the Province in recent years has thus been active in developing rehabilitation measures favourable to those persons requiring prosthetic appliances and other services. Numerous persons have been fitted and supplied with artificial limbs who, otherwise, would

be entirely dependent on public resources for continued assistance. Gainful employment has been accepted by the majority of these cases and an expanded programme is anticipated to provide more fully for other types of cases in this field. The expenditures involved are shared equally by the Province and the municipality.

Cases in which marital discord has been a factor have shown a decided increase and are a constant source of concern. Imprisonment and other temporary conditions account for a further group qualifying for relief.

Regulations under the Unemployment Relief Act govern and guide municipalities in the rendering of public assistance and serve to standardize the amount of aid available to individual cases. Slightly more than one-half of the 913 municipalities submitted accounts in any given month for provincial share of expenditures. The municipalities not rendering accounts are mainly located in rural areas. The table hereunder will show the number of municipalities, according to type, submitting accounts for the last month of the fiscal year, March 1947.

MUNICIPAL ACCOUNTS SUBMITTED

MARCH 1947

	Total number of municipalities	Number of accounts submitted	%
Provincial total	913	497	54.4
Cities	28	28	100.0
Towns and villages	304	167	54.9
Townships	581	302	52.0

Ontario municipalities at this time are financially capable of meeting the municipal share of relief assistance. Local Councils and Welfare Administrators have generally co-operated to the fullest extent in the administration of the Act. Careful consideration is given at all times to suggestions originating from municipalities and relating to policies and standards of assistance.

REPORT OF THE SOLDIERS' AID COMMISSION OF ONTARIO

APRIL 1st, 1946, TO MARCH 31st, 1947.

Commission
Membership

All members of the Commission have continued to serve throughout the year.

Commission
Meetings

One general meeting of the Commission was held during the year. All members showing their usual keen interest.

Audit

Following the end of the fiscal year, an audit of the books and accounts was performed by a representative of the Provincial Auditor's Department. All books and accounts were reported to be in order and to correctly reflect the operations and transactions of the Commission throughout the year. Financial statements will be found appended hereto.

Assistance
and advice
to veterans

1. Emergency grants for the year number 1,737 as compared with 1,686 for the previous year. (No. 8 Account grants shown separately).
2. General information and advice services rendered to ex-service men and dependents totalled 3,057 compared with 2,891 for the previous year.
3. Office interviews for this period were 3,097 as compared with 3,020 for the previous year.
4. Special information and advice re pension claims, War Veterans Allowance procedure, etc., number 522 as compared to 466 for the previous year.

It may be interesting to note that 428 cash grants representing an amount of \$3,517.85 were made to men and dependents of men with service in the 2nd Great War.

Kathleen
Hammond
Fund

The assistance from this fund to widows of veterans, widowed by the war (1914-18) served 602 cases of emergency or special need during the past year as compared with 490 in the previous year. The corpus of this fund was subject to further increases during the year.

Garden Land
Settlement

All dwellings on the Garden Land Settlement have been occupied during the year, and the premises have been supervised and maintained. All revenue, surplus to maintenance requirements, has been preserved in a special reserve fund. Future policy in respect to the Settlement has been under active consideration by the Commission.

General

In connection with the activities of the Commission apart from the many everyday appeals for advice or financial assistance in cases of urgent need throughout the Province, (see Appendices A.R. 1 and 2 of this report), the following "briefs" may be of interest :—

Case "A". In June of last year this man entered St. Michael's Hospital in Toronto suffering from Burger's Disease which

resulted in an emergency operation for the amputation of his left leg above the knee.

General,
cont'd.

Some three months later the Catholic Welfare brought the case to our attention with a request that we supply the man with an artificial leg.

On investigation we found that the man had had good service in the 1st Great War; was only earning a small salary, had a large family to support and therefore could have had his operation at one of the Department of Veterans Affairs Hospitals. Had this been done he would then have been supplied with the leg through Christie Street Hospital Prosthetics Department and at no charge.

In view of this we took the case up with the Department of Veterans Affairs in Ottawa, furnished them with full particulars of the circumstances of his having had the operation performed in a civilian hospital, and asked that the artificial leg be supplied through that Department.

We were later advised that authority had been granted to have the leg supplied, the Department of Veterans Affairs assuming the costs in full.

Case "B". Widow, whose late husband served in the 1st Great War, met with an accident on the streets of a certain municipality due to a defect in the pavement, and, as a result suffered painful injuries to her left elbow and right knee. Her glasses were broken and some clothing damaged.

The cost of replacing the broken glasses was \$8.00 and X-Ray \$7.50.

She put in a claim to the claims office of the city concerned but they definitely refused to do anything in the matter and she came to us. As we considered that her claim was a just one we obtained for her free legal advice, the lawyer took up the case with the civic officials concerned with the result that following his representations a satisfactory settlement of this widow's claim was effected. A very grateful letter of appreciation has been received from her.

Case "C". This man, an ex-Imperial, age 77 years, and in receipt of Old Age Pension—mentally very bright and active—came to see us in May 1947. He was extremely deaf and being unable to converse with his neighbours, members of his Legion Branch or listen to the radio, was becoming very depressed—he was especially fond of outdoor life.

As we had on hand a Zenith Hearing Aid—which we had previously provided an ex-service man who had died after only having had the instrument a very short time and whose next-of-kin had returned it to us—we arranged with the National Society for the Deaf and Hard of Hearing, Toronto, to adjust this instrument—which had been re-conditioned and put into perfect order—for the man. The

General,
cont'd.

results were most satisfactory, so much so, that their enthusiastic Secretary wrote the following little story, entitled "The Chap from the Soldiers' Aid Commission" which speaks for itself :—

"The Chap from the Soldiers' Aid Commission."

Back to work? Today? Me? Not a chance. I'm going down to the Street, take a bus and go as far as it goes—away out into the country; and then walk—out through the fields and listen, just listen to the birds. I haven't heard the little beggars in a long, long time, and I want to hear 'em again—right now—

Did you ever see a big husky man smile—tears in his eyes?

It's kind of nice—he did.

He had been sent over by the Soldiers' Aid Commission—good people the S.A.C. It's a group of men really doing a job for those who, for any reason, don't come under ordinary regulations but need a lift—they get it.

This chap had been sent in for a medical and try-out with a new hearing aid. He'd heard of the things but had been deaf for so long he didn't think he would get much out of it; something maybe, but not much—"Let's get the thing put together.

Quietly, slowly, the volume was turned on while he talked. His voice—raucous, grating, gradually softened to normal tones. The tenseness seemed to fall away from the man, a puzzled wondering look came into his eyes as he began to listen.

Yes, he could hear—clearly—or almost. Shouting at him? No, just quiet normal voice, he was reassured. This just isn't true—can't be. But it was—then he smiled. And caught the bus."

Case "D". This man, who saw service in France in the 1st Great War, (awarded the M.M.), and Canada in the 2nd Great War, had been in Christie Street Hospital from July, 1946, until September, 1946, undergoing treatment for Duodenal Ulcer and Haemorrhoids. He had applied for pension entitlement but there was a long delay and he had become very worried which did not help his condition. We arranged for some priority for the medical examination and in November 1946 he was admitted to Sunnybrook Hospital for treatment and observation.

In January 1947 we were advised that he had been granted pension at the rate of 6% for aggravation—1/5th of 30%. The Board of Pension Commissioners ruling that it had been a pre-war condition aggravated by service.

We were able to obtain statements from the two firms by whom he had been employed for a total of 6 years prior

to enlistment that no time whatsoever had been lost through sickness whilst in their employ, and a further review of the case was requested. This resulted in an increase of assessment to $\frac{3}{5}$ ths of 30%, and a further review of the case was requested as man's condition had become progressively worse. This is still pending.

General,
cont'd.

During the period under review the Director made personal calls on some 197 Branches of Veterans' Organizations in the Province, when meetings were held with the Officials of these bodies and addresses given at general or special meetings of the members.

The work and scope of the Commission was reviewed, individual and general problems discussed and help or advice arranged for or given. A very helpful system of co-operation has been established and continued throughout the Province.

In addition to the veterans' organizations, contact is also made with the Superintendents of Children's Aid Societies, officials of the Provincial Government's Agricultural Loans, and the Provincial Police (especially in unorganized areas), in the different areas visited. The members of the Commission being widely representative of the Province, and being imbued with a sense of responsibility for service to, and the welfare of all ex-service men and their dependents, have conscientiously endeavoured to meet and even to anticipate needs.

The experienced staff of the Commission, guided by the keen spirit of service actuating the Director, has been able to advise, and very promptly assist, a great number of deserving ex-service men and dependents who were in need and often discouraged to the breaking point.

Apart from the actual achievements of the Commission as recorded in the service and financial assistance statements, we believe that an even more important contribution has been made through the cultivation of a better understanding of the reasonable rights and privileges of all who are eligible for assistance, and all veterans organizations and friends who are interested and anxious to help. Actually the development of this better understanding and a truly co-operative spirit, while requiring much time and persevering effort, has done more to create satisfaction and harmony than the mere expenditure of dollars and cents. When such efforts are coupled with the ability to provide prompt emergency assistance and service where necessary ensures both practical and doubly valuable results.

The Commission also desires again to gratefully acknowledge the co-operation of the Veterans' Organizations; The Canadian Red Cross Society; I.O.D.E.; The Last Post Fund and all organizations and individuals who have in numerous ways been helpful during the year.

Respectfully submitted,

E. A. BAKER,

Chairman.

PENSIONS FOR THE BLIND

Blind pensions in Ontario are provided in accordance with the provisions of the revised Dominion Old Age Pensions Act, and are administered by the Ontario Old Age Pensions Commission. Enabling legislation permitted the Province to participate in the payment of Blind Pensions to persons 40 years of age or over who had vision so defective that they were unable to perform work for which eyesight is essential. The Dominion Government pays 75% of the pension granted. The Province pays the remaining 25% plus a cost of living bonus and administration costs. The Provincial share of pensions are paid out of the general revenue fund.

There was an increase in the number of persons accepted for Blind pensions for the fiscal year ending March 31st, 1947. Chart IV shows that for this period 254 persons were accepted for Blind pensions while 185 applications were accepted from April 1st, 1945, to March 31st, 1946.

It has been generally assumed that a person eligible for Blind Pension becomes a permanent pensioner. This belief merits some modification when it is revealed that 174 cases were closed for the fiscal year ending March 31st, 1947. This was 33.8% greater than the number of cases closed for the yearly period ending March 31st, 1946.

The number of cases receiving Blind Pensions increased by 5.18% to a total of 1,623 cases receiving grants as of March 31st, 1947. Obligations incurred for pensions to the Blind during the year totalled \$550,039.52, being an increase of 7.5% over the previous fiscal year. The amount being paid in pensions to the Blind has increased from \$40,052.40 as of April 1st, 1945, to \$46,224.06 as of March 31st, 1947.

Chart Number IV

Persons receiving Blind Pensions during the fiscal year 1945-46 — 1946-47

OLD AGE

OLD AGE PENSIONS

(Old Age Pensions Commission)

Old Age Pensions in Ontario as provided under the revised Dominion Old Age Pensions Act, are administered by the Ontario Old Age Pensions Commission. This provision of pensions is one approach to the problem of the care of the aged. Pensions have been available in Ontario since 1929. Enabling legislation enacted in that year permitted Ontario to participate in the payment of pensions under the Dominion Act to certain persons who, at the time of issuance, had reached the age of 70, and had resided within the Province and Dominion of Canada prescribed periods of time and whose resources for self-maintenance were within the limitations of the Act.

At the outset three levels of government—Dominion, Provincial and Municipal—participated in the financing of pensions. Since 1937, however, the Dominion Government has paid 75% and the Ontario Government 25% of the basic pension. In addition the Province pays a cost of living bonus and costs of administration. The Provincial share of disbursements for Old Age Pensions are paid from the General Revenue fund of the Province. This form of assistance constitutes the largest category in the Department of Public Welfare in terms of the amount of money spent and the number of persons receiving aid.

The broadening of old age pensions regulations since 1929 has made it possible for an increasing number of those in this age group to benefit from this assistance—Chart V indicates the trend in the number of cases.

Chart Number V

Old Age Pensions — Old Age Pensioners at end of each fiscal year

The cessation of hostilities released many citizens of pensionable age from gainful employment. This condition was reflected in the sharp rise in the number of applications for old age pension received by the Commission in the year under review. It is presumed that this trend reflects a general reluctance to employ the elderly person. Such considerations encourage the belief that the rate of increase in the number of applicants for old age pensions during the past year is likely to continue for some time to come.

Chart VI indicates the number of persons receiving old age pensions during the fiscal year ending March 31st, 1947, as compared with the figures for the corresponding period ending March 31st, 1946.

Chart Number VI

Persons receiving Old Age Pensions during the fiscal years 1945-46 — 1946-47

The fiscal year-end review also shows an increase of 1.43% in the number of re-instatements. The number of pensioners from all other provinces who established residence in Ontario increased by 1.33%. The case-load for the month of March 1947 increased 6.28% over the corresponding month in the preceding fiscal year. This is paralleled by a net increase of 4.6% in expenditures.

Chart VII shows monthly comparative payments since April 1st, 1945:—

Chart Number VII

Obligations incurred for Old Age Pensions during the fiscal year
1945-46 — 1946-47

The number of cases closed during the period increased by 76 over that for the previous fiscal year. 75.3% of the cases were closed by reason of death of the pensioner; employment of pensioner or spouse accounted for 14.9%; transfers to other provinces 7.4%, and miscellaneous reasons 2.6%. The percentage distribution for discontinuing assistance varied insofar as it related to Pensioners transferring from Ontario to other Provinces, which increased 41% over the previous period.

The provision of adequate care for the aged, is one of the most acute problems facing us to-day. The decrease in the size of the family, shifts in mortality rates and other factors, have resulted in an increasing proportion in the population of persons aged 70 or over. This trend has affected many aspects of welfare activity concerned with the care of the aged and has intensified an already complex situation.

The Old Age Pensions Act requires a report once each year as to the continuing eligibility of the pensioner. However, data derived from investigations by the field staff would indicate that many of the old age pensioners require considerably more attention than the annual re-determination of their eligibility. Community services are required to arrange for hospitalization and medical attention; to assist the pensioner in securing suitable living accommodation, and to create interest among friends and relatives in his physical care. Since all pension recipients are over 70, they represent a problem of care which a monthly grant alone cannot always meet. Conditions encountered in administering to the welfare and social problems of older people would indicate that skilled case-work is required to deal with the individual aged person. It is important that those engaged in providing for the needs of the older person, should not become so preoccupied with the individual problem that insufficient attention is paid to the over-all situation. The necessity for co-ordinating and consolidating the total resources at hand for the purpose of caring for the dependent aged person is an outstanding social problem of our time.

HOMES FOR THE AGED AND HOUSES OF REFUGE

Homes for the Aged and Houses of Refuge in Ontario are maintained as public institutions by the counties and by certain towns and cities of the Province. The facilities of these institutions are chiefly utilized to house aged persons in the community who require such care. There are in addition a number of privately administered Homes for the Aged operated by philanthropic or religious organizations under the Charitable Institutions Act. The participation of the Department of Public Welfare is largely one of general supervision to ensure that the operation of these institutions conforms to the requirements of the Acts or to the standards set forth by Regulations made under the Charitable Institutions Act.

The Province contributes towards the cost of maintaining persons in approved private Charitable Institutions for the Aged and in District Homes for the Aged on a per diem basis. Where the resident has been receiving provincial assistance in the form of an Old Age or Blind pension, the pension is continued when he is admitted to the institution.

The housing shortage and the rising cost of living have placed an increased demand for living accommodation upon Houses of Refuge and Homes for the Aged during the past year. The need for additional residential quarters has become a matter of great urgency. The shortage of building materials and the rising cost of construction has mitigated against the building of additional accommodation. To assist local governments in this particular problem, the Province has undertaken to pay 25% of the capital cost of construction in the case of those Homes which are public institutions.

The consensus of authoritative opinion in the care of the aged now affirms the great value of private accommodation for elderly persons as close to that of a desirable home environment as possible. The Department has brought to the attention of the appropriate municipal authorities, as the occasion presents itself, certain plans for old people's homes and institutions which have proven to be most acceptable in the experience of many progressively-minded communities.

It is evident that the proportion of old people requiring more extensive medical and nursing care is rapidly increasing. Active treatment hospitals, especially under present conditions, cannot keep elderly bed-ridden persons for extended periods of time. Many families have no proper facilities for such care and many elderly persons have no relatives or friends to come to their aid. Homes for the Aged are therefore faced with the problem of providing special quarters for the bed-ridden under the same administrative organisation as the Home for ambulatory aged.

There are 78 Refuges and Homes for the Aged in Ontario in which 6,080 persons received care during the calendar year 1946.

COMPARATIVE PANELS FOR CALENDAR YEARS 1945 AND 1946
SHOWING RESIDENTS IN HOMES FOR AGED

Panel for Calendar Year 1945

	No. of Homes	Residents	Total Cost of all Homes
Homes in Cities	43	3,494	\$1,573,575.86
Homes in Counties	31	2,289	751,613.47
Homes in Districts	3	169	84,919.49
Total Homes	77	5,952	2,410,108.82

Panel for Calendar Year 1946

Homes in Cities	44	3,591	\$1,497,324.11
Homes in Counties	31	2,311	791,431.91
Homes in Districts	3	178	68,687.93
Total Homes	78	6,080	\$2,357,443.95

The total expended for this period was \$2,357,443.95 of which 50.1% was received from paying residents or persons in receipt of old age pensions. The average daily cost of maintenance for persons in District Homes was \$1.07, in County Homes \$.96, in City Homes \$1.17, this being the highest on record.

INVESTIGATIONAL SERVICES

The work of the investigational services of the Department is primarily related to applications made for Mothers' Allowances, Old Age Pensions and Pensions to the Blind. A trained field staff of investigators is enabled to assist and guide applicants in establishing eligibility for allowances or pensions, and at the same time perform services of a casework nature, through their training, experience and knowledge of the local community and its resources.

The 102 investigators for the Mothers' Allowances and Old Age Pensions Commissions made a total of 131,787 visits throughout the Province during the fiscal year ending March 31st, 1947. 13,053 of these were in regard to new applications, requiring complete investigation, 60,866 were annual reports on beneficiaries and pensioners, 57,868 were routine or special calls.

In the unorganized territories, the full responsibility of completing the applications rests with the investigators.

The Province is divided into areas, each of which is covered by a group of field workers under a supervisor.

Serving in interim Air Force (Permanent Residence)	1	
Moved from Province	2	
Reached majority (Age 21)	10	
Parents arrived in Canada	6	
	37	587
British Child Guests still remaining in Province		37
Privately Evacuated Children		
Privately evacuated children under supervision since September, 1940	156	
Returned to the United Kingdom or discharged	140	
Still remaining in Province including those for full responsibility and those for supervision only		16

RE : DEPENDENT'S ALLOWANCE BOARD

NUMBER OF

Cases open at April 1st, 1946	844
Cases opened or re-opened during year	142
Cases closed during year	841
Cases open at March 31st, 1947	145
Children involved	5,108
Visits made	2,019
Office interviews	1,557

RE : DEPENDENT'S BOARD OF TRUSTEES

NUMBER OF

Cases open at April 1st, 1946	1,916
Cases open or re-opened during year	1,884
Cases completed	3,540
Cases open at March 31st, 1947	260
Visits made	3,106
Office interviews	1,032
Reports forwarded	1,699
Grants administered	193
